

List of Tables

Table 3.1 Inter atomic distance, cohesive energy, Magnetic moment per atom and Spin polarisation factor calculated from Density of states at fermi energy for Au-Pd LACs.	53
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

Table 3.2. Inter atomic distance, cohesive energy, Magnetic moment and Spin polarisation factor calculated from Density of states at fermi energy for Au-Ag LACs.	53
-------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

Table 3.3. Inter atomic distance, cohesive energy, Magnetic moment and Spin polarisation factor calculated from Density of states at fermi energy for Au-Pt LACs.	54
-------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

Table 4.1 Cohesive energy and magnetic moment calculated for Au-Pd, Au-Ag and Au-Pt atomic chains.	73
----------------------------------------------------------------------------------------------------	----

Table 5.1 Our computed inter atomic distances(d), bond angle(Φ, θ), for the single chain placed on NiAl (110) and Cu(110) substrate respectively are reported here. Magnetic moment of free-standing chain (μ) is also listed in the table.	83
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

Table 5.2 Computed values of E_{C-S} and E_{C-C} for single chains on NiAl (110) and Cu(110) substrates shown Fig. 5.1.	84
-----------------------------------------------------------------------------------------------------------------------------	----

Table 5.3 Inter atomic distances(d_1, d_2 & d_3), and bond angle (θ), for double zigzag chains on Cu(110) substrate , which is exhibited in Fig. 5.2.	86
----------------------------------------------------------------------------------------------------------------------------------------------------------------------	----

Table 5.4 Computed values of E_{C-S} and E_{C-C} for double zigzag chains/Cu(110) system as exhibited in Fig. 5.2.	87
------------------------------------------------------------------------------------------------------------------------	----
