

LIST OF TABLES

Table No.	Table Title	Page No.
Table 4.1	Effect of milling ball diameter on average particle size of synthetic quartz.	50
Table 4.2	Effect of dispersing medium on average particle size of synthetic quartz.	50
Table 4.3	Effect of surfactant concentration on average particle size of synthetic quartz.	51
Table 4.4	Effect of variation in BPR on average particle size of synthetic quartz.	52
Table 4.5	Effect of variation in milling time on average particle size of synthetic quartz.	52
Table 4.6	Transformation of quartz phases in prepared nano sample with variation in temperatures.	57
Table 4.7	Atomic percentage of elements in nano synthetic quartz sample by EDX study.	60
Table 5.1	Average TL growth percentages for 230°C glow peak of NSQ sample annealed at 1000°C w.r.t. unannealed NSQ sample	76
Table 5.2	Average TL growth percentages for 110°C glow peak of unannealed NSQ with optical bleaching w.r.t. unannealed NSQ without optical bleaching at RT	87
Table 5.3	Average TL growth percentages for 165°C glow peak of unannealed sample with optical bleaching w.r.t. unannealed sample without optical bleaching at RT	87
Table 5.4	Average TL growth percentages for 220°C glow peak of unannealed sample with optical bleaching w.r.t. unannealed sample without optical bleaching at RT	87
Table 5.5	Average TL growth percentage for 220°C glow peak	87

	of unannealed sample with optical bleaching w.r.t. unannealed sample without optical bleaching at 160°C	
Table 5.6	Average TL growth percentages for 230°C glow peak of unannealed sample with optical bleaching at 160°C w.r.t. unannealed sample with optical bleaching at RT	88
Table 5.7	Average TL growth percentages for 110°C glow peak of 1000°C AQ sample with optical bleaching w.r.t. 1000°C AQ sample without optical bleaching at RT	89
Table 5.8	Average TL growth percentages for 220°C glow peak of 1000°C AQ sample with optical bleaching w.r.t. 1000°C AQ sample without optical bleaching at RT	89
Table 5.9	Average TL growth percentages for 230°C glow peak of 1000°C AQ sample with optical bleaching in w.r.t. 1000°C AQ sample without optical bleaching at 160°C	90
Table 5.10	Average TL growth percentages for 230°C glow peak of 1000°C AQ sample with optical bleaching at RT in w.r.t. 1000°C AQ sample with optical bleaching at 160°C	90
Table 5.11	Observation for TL-DRC of Unannealed, 400°C, 600°C and 1000°C annealed NSQ samples	91
Table 5.12	Observation of OSL (at RT and 160°C) within 0 to 0.4 seconds stimulation time for unannealed sample	103
Table 5.13	OSL components (at RT and at 160°C) of unannealed sample for 0.4 and 100sec of stimulation time	106
Table 5.14	PIC of OSL (at RT and at 160°C) of unannealed sample for 0.4 to 100sec of stimulation time	106
Table 5.15	OSL (at RT and at 160°C) components of annealed	109

	samples for 0.4 to 100sec of stimulation time	
Table 5.16	PIC of OSL (at RT and at 160°C) of annealed samples for 0.4 to 100sec of stimulation time	110
Table 5.17	Observation of OSL-DRC (at RT) of Unannealed, 400°C, 600°C and 1000°C annealed NSQ samples at (15.76Gy-199.6Gy) beta dose	112
Table 5.18	Observations for OSL-DRC (at 160°C) of Unannealed, 400°C, 600°C and 1000°C annealed NSQ samples for (15.76Gy-199.6Gy) beta dose	123
Table 5.19	Summary and outcomes of ESR study of annealed and un-annealed NSQ sample irradiated with different beta radiation dose	129
