

Table of Contents

ABSTRACT.....	7
INTRODUCTION.....	9
1.1. Background.....	10
1.2. Use of Small Proteins to Understand Protein Structure and Folding	11
1.3. Structure of Ubiquitin	11
1.4. C Terminal G1 β Bulge of Ubiquitin	14
1.5. N Terminal β Bulge of Ubiquitin	16
1.6. Folding of Ubiquitin.....	17
1.7. Ubiquitination and its Types	17
1.8. Ubiquitin Genes	21
1.9. Enzymes Involved in Ubiquitination.....	22
1.10. Deubiquitinating Enzymes	24
1.11. The Proteasome.....	25
1.12. Ubiquitin Fusion Degradation (UFD) Pathway.....	27
1.13. N-End Rule and the Role of Ubiquitination.....	27
1.14. Role of Ubiquitin in Cell Function and Disease.....	29
1.15. <i>Saccharomyces cerevisiae</i> as a Model System	30
1.16. Use of β -bulge Substitutions to Study Structure Function Relationships.....	31
1.17. Isolation of UbEP42 Mutation through <i>in vitro</i> Evolution.....	32
1.18. Understanding the Importance of Conserved Residues in Ubiquitin through the Functional Characterisation of Mutants	33
Functional Characterization of UbEP42 Derived Double Mutants in <i>Saccharomyces cerevisiae</i>	37
2.1 Introduction.....	38
2.2 Materials and Methods.....	41
2.2.1 Yeast Strains, Media and Plasmids	41
2.2.2 Plasmids	42
2.2.3 Antibiotic Sensitivity Test	44
2.2.4 K-48 linked polyubiquitination assay	44
2.2.5 Lysosomal Degradation of Uracil Permease	45
2.2.6 Cdc28 Assay.....	45
2.2.7 Ubiquitin fusion degradation (UFD) Pathway.....	46
2.2.8 Confocal Microscopy for Endosomal Sorting of GFP-CPS Fusion Protein.....	46

2.3 Results.....	47
2.3.1 Sensitivity to Translational Inhibitors	47
2.3.2 Protein degradation through UFD Pathway.....	50
2.3.3 Cdc28 levels, effect on cell cycle.....	52
2.3.4 Effect on lysosomal protein degradation studied by monitoring uracil permease levels	53
2.3.5 Endosomal sorting of Carboxypeptidase S.....	54
2.3.6 Effect on K-48 linked polyubiquitination	57
2.4 Discussion.....	58
Functional Characterization of Q2N, E64G And S65D Single Mutants of Ubiquitin in <i>Saccharomyces cerevisiae</i>.....	63
3.1 Introduction.....	64
3.2 Materials and Methods.....	68
3.2.1 Yeast Strains and Media	68
3.2.2 Plasmids	68
3.2.3 Antibiotic Sensitivity Test	69
3.2.4 K48 linked polyubiquitination assay	70
3.2.5 Lysosomal Degradation of Uracil Permease.....	70
3.2.6 Cdc28 Assay.....	71
3.2.7 Confocal Microscopy for Endosomal Sorting of GFP-CPS Fusion Protein	71
3.3 Results.....	72
3.3.1 Effect of the β Bulge Mutations on Sensitivity to Translational Inhibitor.....	72
3.3.2 Effect of the β Bulge Mutations on K48 Linked Polyubiquitination	74
3.3.3 Effect of the β Bulge Mutations on Lysosomal Degradation of Uracil Permease.....	75
3.3.4 Effect of the β Bulge Mutations on Cdc28 Levels	76
3.3.5 Effect of the β Bulge Mutations on Endosomal Sorting of GFP-CPS Fusion Protein	77
3.4 Discussion.....	79
SUMMARY	82
