

# LIST OF TABLES

Sr. No.	Table	Table Caption	Page No.
1	Table 3.1	Comparison of various infrastructure layer protocols	34
2	Table 3.2	Comparison of session/application layer protocols	37
3	Table 3.3	Summary of significant categories(working principles) of low-cost sensors	39
4	Table 3.4	Commercially available and frequently used gas sensors	40
5	Table 4.1	Existing processing units for building sensing layer of air quality monitoring system using IoT	56
6	Table 4.2	Specification of SDS021	57
7	Table 4.3	Specification of ZE07 CO	58
8	Table 4.4	Significance of bytes in UART Data Frame for SDS021	60
9	Table 4.5	Significance of byte in UART data frame for ZE07 CO	60
10	Table 5.1	Sensing cycle phases for various components of sensing unit during parameter reading	83
11	Table 5.2	Comparison of MSE of the proposed model(FBLSTM) with LSTM and RNN for training and validation	98
12	Table 5.3	MSE comparison of FBLSTM with attention and without attention after 300 epochs for various time horizons	104
13	Table 5.4	MSE comparison of FBLSTM with attention and without attention after 300 epochs for various input windows	104
