

ACKNOWLEDGEMENT

The author is deeply grateful to his guide and mentor Dr. D.M. Shringarpure for his continual help and encouragement throughout the research work. Without his guidance and supervision this work would not have been completed. The author has further to acknowledge Dr. Shringarpure for the excellent coloured photographs which are very significant in context with the text of this thesis.

The author is equally grateful to his friends and colleagues Shri. S.J. Patel, Shri. Sandeep Khopkar, Shri. N.Y. Bhatt, Shri. Manoj Limye and Shri. Pankaj Valand who have helped him throughout the various stages, of geological field work and compilation of the thesis.

The photomicrograph and the black-white photographs by the departmental artist Shri. B.M. Chavan deserves a special mention.

Determination of the phosphate content in the Piram Island sediments was done at the Biochemistry Department of our University and the author has to express his gratitudes to Prof. L.J. Parikh and Dr. M.D. Jani for the same.

The author would also record the help rendered by Shri. N. Nandakumar who sat through long and dark hours of typing the script on the computer.

The entire research work was carried out in the Department of Geology, M.S. University of Baroda. In this context Prof. N.M.Vashi, Head of the department, was always kind to provide all necessary help and assistance.

The author received financial assistance from the Department of Higher Education, Govt. of Gujarat, Gandhinagar under Higher Education Research Scholarship Scheme. The author sincerely appreciate the Government gesture and acknowledge this help.

Last but not the least this work would not have been possible without the constant encouragement of my parents, and my cousin, Dr. Urmila Joshi to whom I shall always feel grateful.

M.V.SAKHAWALA
