ACKNOWLEDGEMENTS	I-II
LIST OF FIGURES	III-IV
LIST OF TABLES	V-VI
LIST OF ABBREVIATIONS	VII-X
ABSTRACT	XI-XIV
CHAPTER 1	1-56
<hr/>	
Review of literature	
1.1. INTRODUCTION	
1.2. HISTORY OF PROBIOTICS	
1.3. CRITERIA FOR PROBIOTICS	
1.4. <i>LACTOBACILLUS</i> STRAINS	
1.5. SOURCE, ISOLATION AND IDENTIFICATION OF <i>LACTOBACILLUS</i> STRAINS	
1.5.1. Source	
1.5.2. Isolation	
1.5.3. Identification	
1.6. CHARACTERIZATION OF LACTOBACILLI AS PROBIOTICS	
1.6.1. Acid and bile tolerance	
1.6.2. The antimicrobial properties	

1.6.3. Antibiotic susceptibility

1.6.4. Adhesion of *Lactobacillus* strains

1.7. PHYSIOLOGICAL ATTRIBUTES OF LACTOBACILLI

1.7.1. BSHs and lowering cholesterol levels

1.7.2. β -Galactosidase production and Lactose intolerance

1.7.3. α -Galactosidase production

1.8. IMMUNOMODULATION

1.9. BENEFICIAL ROLE OF PROBIOTICS IN HUMAN HEALTH AND DISEASE

CHAPTER 2

57-82

Isolation, identification and characterization of *Lactobacillus* strains from human sources

2.1. INTRODUCTION

2.2. MATERIALS AND METHODS

2.2.1. Standard *Lactobacillus* strains

2.2.2. Isolation and identification of *Lactobacillus* strains

2.2.3. Bile and acid tolerance

2.2.4. Antimicrobial activity

2.2.5. Antibiotic susceptibility assay

2.2.6. Cell culture

2.2.7. Adhesion to HT-29 and Caco-2

2.2.8. Antagonistic effect of *Lactobacillus* isolates on adhesion of *E. coli* to HT-29 cells and Caco-2

2.2.9. Statistical analysis

2.3. RESULTS

2.3.1. Isolation and identification of *Lactobacillus* strains from human sources

2.3.2. Bile tolerance

2.3.3. Acid tolerance

2.3.4. Antimicrobial activity

2.3.5. Antibiotic susceptibility assay

2.3.6. Adhesion of lactobacilli to intestinal epithelial cell lines

2.3.7. Antagonistic effect of *Lactobacillus* isolates on adhesion of *E. coli* to intestinal epithelial cell lines (HT-29 and Caco-2)

2.4. DISCUSSION

CHAPTER 3

83-101

Study production of β -galactosidase and α -galactosidase and cholesterol removal by *Lactobacillus* strains

3.1. INTRODUCTION

3.2. MATERIALS AND METHODS

3.2.1. Bacterial strains and culture conditions

3.2.2. β -Galactosidase production

3.2.3. Cholesterol removal by different lactobacilli and by *Lactobacillus*
fermented curd

3.2.4. α -Galactosidase production

3.2.5. Statistical analysis

3.3. RESULTS

3.3.1. β -Galactosidase production

3.3.2. Cholesterol removal by different lactobacilli

3.3.2.1. Cholesterol removal from broth by different lactobacilli

3.3.2.2. Cholesterol removal by *Lactobacillus* fermented curd

3.3.2.3. pH of curd prepared with different lactobacilli

3.3.2.4. Protein concentration in whey

3.3.3. α -Galactosidase production

3.4. DISCUSSION

CHAPTER 4

102-137

Study immunomodulating potential of *Lactobacillus* strains on PBMCs, PMNs and macrophages

4.1. INTRODUCTION

4.2. MATERIALS AND METHODS

4.2.1. Isolation and stimulation of monocytes and polymorphonuclear
neutrophils (PMNs) with lactobacilli

4.2.2. RNA isolation

4.2.3. cDNA synthesis and quality confirmation

4.2.4. Quantitative real time PCR (qRT PCR)

4.2.5. Statistical analysis

4.3. RESULTS

4.3.1. RNA isolation and cDNA quality confirmation of PBMCs and macrophages exposed to different lactobacilli and *E. coli* O26:H11

4.3.2. Quantification of various macrophage markers (M1 and M2) in PBMCs and macrophages through real-time PCR

4.3.3. RNA isolation and cDNA quality confirmation of PMNs exposed to different lactobacilli and *E. coli* O26:H11

4.4. DISCUSSION
