

Table of Contents

Chapter 1: Introduction	1
1.1 Graphene: A rise of two-dimensional materials	1
1.2 Approaches for tuning properties of two-dimensional materials	6
1.2.1 Dimensional tuning	7
1.2.2 Elastic strain	8
1.2.3 Doping and defect	9
1.2.4 Two-dimensional hetero-structure	10
1.2.5 Intercalation	12
1.3 Research objectives	13
1.4 Structure of the present thesis	14
References	21
Chapter 2: The upbringing of density functional theory	25
2.1 Formulism of density functional theory	25
2.1.1 Many body problem	27
2.2 Wave function-based method to solve many body problem	28
2.2.1 Born-Oppenheimer approximation	28
2.2.2 Hartree approximation	30
2.2.3 Hartree-Fock (HF) approximation	31
2.3 Density based method: Density functional theory	33
2.3.1 Thomas-Fermi theory	33
2.3.2 Hohenberg and Kohn theorems	34
2.3.3 The Kohn-Sham equation	37
2.4 Exchange and correlation functional	40

2.4.1	Local density approximation (LDA)	40
2.4.2	Generalized-gradient approximation (GGA)	42
2.5	Density functional perturbation theory	43
2.6	Dispersion correction to density functional theory	45
2.7	Elastic properties	46
	References	50
Chapter 3: Effect of dopants on arsenene and two-dimensional zirconium chalcogenides based nano catalysts towards hydrogen evolution reaction		53
3.1	Introduction	53
3.2	Computational methods	57
3.3	Results and discussion	59
3.3.1	Arsenene with dopants B, N, O, Ga, Ge and Se	59
3.3.2	ZrS ₂ , ZrSe ₂ and Janus ZrSSe with Nb, Pt and W dopants	68
3.4	Conclusions	78
	References	81
Chapter 4: Insight into electronic behavior and stability criteria of Bi, BiAs and BiSb monolayers		85
4.1	Introduction	85
4.2	Computational methods	87
4.3	Results and discussion	88
4.3.1	Structural and electronic properties	88
4.3.1.1	Optical properties	90
4.3.1.2	Electronic properties under strain	93
4.3.2	Vibrational properties	95
4.3.3	Mechanical properties	97

4.4	Conclusions	100
	References	101
Chapter 5: Effect of intercalation and vertical hetero-structure Silicene/SnSe₂ over the electronic properties of silicene		105
5.1	Introduction	105
5.2	Computational methods	108
5.3	Results and discussion	110
5.3.1	Structural and electronic properties of silicene, SnSe ₂ and Si/SnSe ₂	110
5.3.2	Effect of intercalation over the Structural and electronic properties of Si/SnSe ₂	114
5.3.2.1	Structural and electronic properties of hetero-structure (Si/SnSe ₂) with chlorine atom.	115
5.3.2.2	Structural and electronic properties of hetero-structure (Si/SnSe ₂) with phosphorous (P) atom.	119
5.3.2.3	Structural and electronic properties of Hetero-structure (Si/SnSe ₂) with ammonia (NH ₃) molecule.	122
5.4	Conclusions	133
	References	136
Chapter 6: Two-dimensional hybrid inorganic-organic perovskites: Methylammonium Lead Iodide		139
6.1	Introduction	139
6.2	Computational methods	144
6.3	Results and discussion	145
6.3.1	Structural and electronic properties	145
6.3.2	Implications to solar cell	150
6.4	Conclusions	158
	References	160
Chapter 7: Summary and Future Scope		164
Curriculum Vitae and List of Publications
