

## ACKNOWLEDGEMENTS

The recent explosive growth of neuroendocrinology, though impressive and inspiring, has certainly augmented the quantity and complexity of scientific information. Nevertheless, this matter has never made me nervous thanks to the expertise and enthusiasm of my guide Prof. (Dr.) Bonny Pilo, Head, Department of Zoology & Coordinator, UGC-DSA Programme. His valuable guidance, genial nature and handsome help in providing facilities - all have made this study an exciting and stimulating career. My greatest measure of gratitude goes to him.

I would be grateful to Prof. (Dr.) P.M. Ambadkar, former Head and other staff members of Department of Zoology for their encouragement and assistance provided.

I express my deep appreciation to Prof. (Dr.) S.K. Aggarwal, Michigan State University, USA, for his advice and suggestions. Not to be forgotten are the animated discussions I had with him on the antitumour drug Cisplatin.

I must, of course, thank my friends Anoop, Vinod, Paul, Pradeep and Muru - all important well-springs of inspiration and help. I also appreciate the harmonious atmosphere at work provided by my colleagues Miss. Radha Parikh, Miss. Sirimavo Pillai and Miss. Sunita Patil. They all believed in 'esprit de corps'.

I must also thank my wife Smitha for her love and encouragement and my family for their patience during the preparation of this manuscript.

I would like to acknowledge the award of Junior Research Fellowship in Developmental Physiology Programme from University Grants Commission, New Delhi for supporting the research discussed herein.

Finally, I thank Mr. Benjie Mathew and Miss. Rajashree Kulkarni for graphic designs and M/s. Midea Point for word processing.

SAJI OOMMEN.
