<b>INTRODUCTION</b>	<b>1</b>
---------------------	----------

## **Chapter 1**

**Hepatic oxidative stress and toxicity due to Chromium (VI) exposure:  
Duration dependent study using realistic dosage and protective effect of  
melatonin.**

**7**

## **Chapter 2**

**Renal oxidative stress and toxicity due to Chromium (VI) exposure:  
Duration dependent study using realistic dosage and protective effect of  
melatonin.**

**39**

## **Chapter 3**

**Chronic Cadmium exposure to a realistic dosage causes elevated hepatic  
oxidative stress but, decreases the same on longer exposure by adaptive  
mechanisms and, melatonin protects and augments the exposure.**

**60**

## **Chapter 4**

**Renal oxidative stress and toxicity and alterations in serum parameters  
due to Cadmium exposure: Duration dependent study using realistic  
dosage and protective effect of melatonin.**

**88**

## **Chapter 5**

**Hepatic oxidative stress and toxicity due to Nickel exposure: Duration dependent study using realistic dosage and protective effect of melatonin.**  
112

## **Chapter 6**

**Renal oxidative stress and toxicity due to Nickel exposure: Duration dependent study using realistic dosage and protective effect of melatonin**  
136

## **Chapter 7**

**Hepatic oxidative stress and toxicity due to Trimetallic exposure: Duration dependent study using realistic dosage and protective effect of melatonin.**  
159

## **Chapter 8**

**Renal oxidative stress and toxicity due to Trimetallic exposure: Duration dependent study using realistic dosage and protective effect of melatonin.**  
188

## **Chapter 9**

**Induction of cytolethality and generation of ROS by Cadmium, Chromium and Nickel alone or in combination: *In vitro* studies on HepG2 and Chang cells and protective effect of melatonin.**  
222

## **Bibliography**

247
