

Acknowledgements

My heartfelt thanks go to almighty God for the patience, perseverance, and courage he has given me. He has bestowed upon me to complete this research work successfully.

The achievement of completing my thesis entitled "Certain generalized matrix functions and their properties" was made possible by the inspiring supervision and able guidance of Dr. B. I. Dave, Professor, Department of Mathematics, Faculty of Science, The Maharaja University of Baroda, Vadodara.

In honor of this significant achievement, I would like to extend my deepest respect and gratitude to my supervisor, Dr. B. I. Dave, on behalf of myself and all members of my family. I acquired the necessary skills, encouragement and knowledge for conducting my research under his guidance throughout the research process. He instilled in me the determination and self-confidence to conduct my research work in a highly focused and competent manner. Working under his guidance has always been a privilege and honor. Without his splendid patronage, the present work would not have seen the light of the day. I am also thankful to Mrs. Jagruti Dave and Mr. Ishan Dave for their best wishes to complete my research work.

In order for me to complete my thesis, I would be unable to do so without the collaborative and cooperative efforts of my co-authors and friends Dr. Bharti Nathwani and Dr. Ravi Dwivedi.

My heartfelt thanks go out to my loving parents, Mr. Tarachand Maheshwari and Mrs. Nirmalaben Maheshwari, who have sacrificed their joys of life to see me succeed in this endeavor. Sonal, Girish, Vaishali, and Yogesh deserve special thanks for being there for me during all the curves and at times acting as my elders to motivate and encourage me throughout this process with their unending love and encouragement.

I wish to express my profound gratitude and astoundingly deep feelings towards my husband Rohit Sanjhira, who has always been constantly supportive, loyal, devoted, unfailing love, generous, and enthusiastic throughout this work.

Words are not enough to express my feelings to my strawberries Ayati Sanjhira and Avishi Sanjhira for their unconditional love, munificence, and support for me to pursue this journey.

Also, I would also like to thank my mother-in-law Manjulaben Sanjhira and other family members for their help and motivation.

I take great pleasure in offering my respectful gratitude to Dr. R. G. Vyas, Head of, Department of Mathematics, who always encouraged me by his sincere advice and helpful suggestions.

I am also grateful to the Dean of Science, Prof. H. R. Kataria, and the former Head Department of Mathematics, who supported me throughout my research work.

Besides my advisor, I would like to thank all of my teachers who have been extremely supportive, encouraging, and helpful to me. I am also thankful to the administrative staff for helping me during this work.

It would be incomplete if this acknowledgment was not accompanied by the consent of the CHARUSAT family members. I also appreciate the efforts and positive attitude of former head Dr. A. B. Patel and all colleagues from the Department of Mathematical Sciences.

A big thanks and appreciation goes to Mr. Vyomesh Nandurbarkar, Mr. Pallav Shah, Mr. Rahul Mehta, and Ms. Kriti Dheerawat for their assistance and support during this period. Also, I am grateful to all of Dr. B. I. Dave's research students.

I owe special thanks to my all dear friends for being there in my times and extending their liberal hands whenever and whenever I needed them.

My sincere thanks are also due to all the researchers whose work I have referred to during the entire period of my research work and those whose work I have quoted in the Bibliography.

Lastly, I wish to acknowledge to all who directly and indirectly helped me in successful completion of this thesis work.

Vadodara,
July 2021

(Reshma Rohitkumar Sanjhira)
