

Table of contents

Chapter	Sub-headings	Title	Page No.
		List of Tables	i
		List of Figures	i-ii
		List of Abbreviations	iii
		Abstract	iv-v
1		General Introduction	
	1.1	Glial cells in central nervous system(CNS)	1
	1.2	Morphology, physiology, development and functions of astrocytes	1-6
	1.3	Mitochondrial functions and associated central nervous system diseases	6-12
	1.4	Role of MeCP2 in mitochondrial dysfunction	12
	1.5	Neuroinflammation and associated central nervous system diseases	13-14
	1.6	Structure, metabolism and properties of Quercetin- a plant flavonol	14-15
	1.7	Effect of quercetin on CNS cells	15
	1.8	Structure, metabolism and properties of Docosahexaenoic acid- an omega-3 polyunsaturated fatty acid	15-17
	1.9	Effect of DHA on CNS cells	17
		Rationale of the study	18
		Major Objectives	18
2		Materials and Methods	19-26
3		Obj.1 To determine the effects of quercetin on mitochondrial dysfunction mediated by MeCP2 deficiency in astrocytes	
	3.1	Introduction	27-29
	3.2	Experimental design	30
	3.3	Results and discussion	30-45
	3.4	Summary	46-47
4		Obj.2 To determine the effects of DHA on mitochondrial dysfunction mediated by MeCP2 deficiency in astrocytes	
	4.1	Introduction	48-49
	4.2	Experimental design	50
	4.3	Results and discussion	50-61
	4.4	Summary	62-64
5		Obj.3 To evaluate anti-inflammatory role of quercetin and DHA on LPS activated astrocytes	
	5.1	Introduction	65-67
	5.2	Experimental design	68
	5.3	Results and discussion	69-78
	5.4	Summary	79
6		Overall summary & conclusion	80-84
		Bibliography	85-110
