List of Tables

Chapter	Table no.	Title	Page No.
1	1.1	Markers of astrocytes and their progenitors	3
2	2.1	Antibodies used for Immunocytochemistry	21
	2.2	Species-specific oligonucleotide primers list	23
	2.3	Antibodies used in western blot analysis	25

List of Figures

Chapter	Figure No.	Title	Page No.
1	1.1	Astrocytes are morphologically heterogeneous	2
	1.2	Development of astrocytes	6
	1.3	Mitochondrial electron transport chain	8
	1.4	Mitochondrial oxidative damage	10
	1.5	Ca^{2+} activation of the TCA cycle and oxidative phosphorylation	11
	1.6	Metabolism of quercetin and DHA and availability to brain	17
3	3.1	Characterization of astrocytes and C6 glial cells	37
	3.2	Confirmation of purity of astrocytes	38
	3.3	Cell viability and morphological analysis of quercetin treated and MeCP2 knock-down astrocytes	38,39
	3.4	Effect of quercetin on mitochondrial respiratory chain genes expression in MeCP2 knock-down astrocytes	40
	3.5	Effect of quercetin on mitochondrial respiratory chain protein expression in MeCP2 knock-down astrocytes	41
	3.6	Effect of quercetin on mitochondrial respiratory chain enzyme activities in MeCP2 knock-down astrocytes	41,42
	3.7	Effect of quercetin on ROS production in MeCP2 knock-down astrocytes	42
	3.8	Effect of quercetin on intracellular calcium in MeCP2 knock-down astrocytes	43
	3.9	Effect of quercetin on mitochondrial membrane potential in MeCP2 knock-down astrocytes	43,44
	3.10	Analysis of intracellular calcium, ROS and cell viability in quercetin treated MeCP2 knock-down C6 glial cell line	44,45
4	4.1	Cell viability and morphological analysis of DHA treated MeCP2 knock-down astrocytes	55
	4.2	Effect of DHA on mitochondrial respiratory chain genes expression in MeCP2 knock-down astrocytes	56
	4.3	Effect of DHA on mitochondrial respiratory chain protein	57

		expression in MeCP2 knock-down astrocytes	
	4.4	Effect of DHA on mitochondrial respiratory chain enzyme activities in MeCP2 knock-down astrocytes	57,58
	4.5	Effect of DHA on ROS production in MeCP2 knock-down astrocytes	58,59
	4.6	Effect of DHA on intracellular calcium in MeCP2 knock-down astrocytes	59
	4.7	Effect of DHA on mitochondrial membrane potential in MeCP2 knock-down astrocytes	60
	4.8	Analysis of intracellular calcium, ROS and cell viability in DHA treated MeCP2 knock-down C6 glial cell line	60,61
5	5.1	Time dependent effect of LPS on gene expression of inflammatory markers	73
	5.2	Quercetin reduces gene expression of inflammatory markers in a dose dependent manner	73,74
	5.3	Effect of quercetin on MAP kinase pathway and Glial fibrillary acidic protein (GFAP)	74,75
	5.4	Effect of quercetin on NF-κB pathway	75,76
	5.5	DHA reduces gene expression of inflammatory markers in astrocytes and C6 glial cells	76,77
	5.6	pERK1/2 protein expression modulates in DHA treated LPS activated astrocytes	78
6	6.1	Diagrammatical illustration of Chapter-3 result summary	81
	6.2	Diagrammatical illustration of Chapter-4 result summary	82
	6.3	Diagrammatical illustration of Chapter-5 result summary	83
