

List of Figures

Figure No.	Title	Page no.
2.1	Percentage of deaths due to non-communicable diseases occurring under age of 70 (females), 2012	10
2.2	Process from programmed puberty to quasi-programmed menopause	19
2.3	Summary of hypothalamic estrogen actions regulating energy balance	22
2.4	Potential mechanisms explaining menopause related increases in abdominal and intra-abdominal adiposity	22
2.5	Factors contributing to hypertension in postmenopausal women	25
2.6	Sex hormones and postmenopausal women hypertension	26
2.7	Model showing estrogenic control of glucose homeostasis by regulatory actions in cns, β cells, muscles, liver, and adipocytes	29
2.8	Overview of insulin resistance induced by estrogen deficiency, and subsequent disturbances in metabolic tissues	30
2.9	Opposing effects of sex steroid hormones on cerebrovascular inflammation	34
2.10	Anti-inflammatory effect of estrogen in adipose tissues	35
2.11	Benefits of estrogen for liver health	40
2.12	Structure of vitamin b12	45
2.13	Absorption and enterohepatic circulation of vitamin b12	46
2.14	Structure of folic acid	50
2.15	Interrelationship of vitamin b12 and folate	50
2.16	A primer of inflammatory process	54
2.17	Interrelationship of inflammation, obesity and metabolic syndrome	60
2.18	Insulin resistance, tissue inflammation and obesity	63
2.19	AHA 2006 Diet and Lifestyle Recommendations for Cardiovascular Disease Risk Reduction	68
2.20	Metabolism of omega-3 and omega-6 fatty acids	79
2.21	Action mechanisms of flaxseed bioactive compounds on risk reduction of non-communicable chronic diseases	85
3.1	Experimental design: Phase I	100
3.2	Experimental design: Phase II	103
3.3	Experimental design: Phase III (a)	108
3.4	Experimental design: Phase III (b)	109
4.1	Comparison of mean values of age between pre and post-menopausal women	150

Figure No.	Title	Page no.
4.2	Menopausal symptoms experienced by post-menopausal women (%)	150
4.3	Percent frequency distribution of various oils used by the women (%)	156
4.4(a)	Comparison of mean consumption of oil in grams between pre and post-menopausal women	156
4.4(b)	Comparison of mean consumption of salt in grams between pre and post-menopausal women	157
4.4(c)	Comparison of mean consumption of sugar in grams between pre and post-menopausal women	157
4.5	Percent distribution of calories from macronutrients	160
4.6	Percent prevalence of various categories of obesity in women	178
4.7	Menopause as a risk factor for high body fat percent through univariate analysis	178
4.8	Percent prevalence of various categories of hypertension in women	179
4.9	Menopause as a risk factor for hypertension through univariate analysis	179
4.10(a)	Percent prevalence of dyslipidemia in the subjects (High TC)	181
4.10(b)	Percent prevalence of dyslipidemia in the subjects (High LDL-C)	181
4.10(c)	Percent prevalence of dyslipidemia in the subjects (High TG)	181
4.10(d)	Percent prevalence of dyslipidemia in the subjects (Low HDL-C)	181
4.11	Menopause as a risk factor for diabetes through univariate analysis	184
4.12	Menopause as a risk factor for high HbA1c levels through univariate analysis	184
4.13	Percent prevalence of various categories of HsCRP levels	184
4.14	Percent prevalence of vitamin B12 deficiency in women	191
4.15	Percent prevalence of folic acid deficiency in women	191
4.16	Percent prevalence of iron deficiency anemia in women	191
4.17	Menopause as a risk factor for high alkaline phosphatase levels through univariate analysis	193
4.18	Prevalence of vitamin B12 deficiency in the women	211
4.19	Prevalence of folic acid deficiency in the women	211
4.20	Comparison of mean value of dietary intake of vitamin B12 between subjects with low serum vitamin B12 and normal levels	212
4.21	Very low dietary intake of vitamin B12 as a causal factor for vitamin B12 deficiency through univariate analysis	216
4.22	Non use of health supplements as a causal factor for vitamin B12 deficiency through univariate analysis	216

Figure No.	Title	Page no.
4.23	No regular health check-up as a causal factor for vitamin B12 deficiency through univariate analysis	216
4.24	Association of vitamin B12 deficiency with hypertension through univariate analysis	219
4.25	Association of vitamin B12 deficiency with low HDL-C levels through univariate analysis	219
4.26	Prevalence of high HsCRP levels in the women	226
4.27	Association of inflammation with low HDL-C levels through univariate analysis	229
4.28	Association of inflammation with high AIP levels through univariate analysis	229
4.29	Association of inflammation with metabolic syndrome through univariate analysis	229
4.30	Quartiles of HOMA IR values	235
4.31	Association of insulin resistance with obesity through univariate analysis	239
4.32	Association of insulin resistance with low HDL-C levels through univariate analysis	239
4.33	Association of insulin resistance with high energy intake through univariate analysis	239
4.34	Chromatogram of fatty acid profile of flaxseeds (PKV NL-260) using GC-MS	249
4.35	Percent change in lipid profile and atherogenic indices of the subjects post supplementation	267
4.36	Percent change in glycemic and inflammatory profile of the subjects post supplementation	281
4.37	Percent change in glycemic profile of the subjects with HIGH HOMA IR levels (>1.2) post supplementation	287
4.38	Percent change in anthropometric and biophysical parameters of the subjects post supplementation	294
4.39	Change in percent prevalence of obesity and hypertension among the study subjects	295
