

List of Tables

Table	Title	Page No.
2.1	Classification of sediment contamination	44
2.2	Properties of dyes	47
3.1	Soil composition of Angad section	58
3.2	Soil composition of Amrapura section	59
3.3	Soil composition of Chamunda nagar section	60
3.4	Properties of colloidal suspension of Rayka section	63
3.5	ICP- AES analysis of colloidal suspensions	64
3.6	Properties of colloidal suspensions of Jaspur section	67
3.7	Properties of colloidal suspensions of Dodka section	70
3.8	Properties of colloidal suspensions of Mujpur section	73
3.9	Properties of colloidal suspensions of Angad section	77
3.10	Properties of colloidal suspensions of Amrapura section	79
3.11	Properties of colloidal suspensions of Chamunda nagar section	81
3.12	Elemental content of aquatic colloids	89
3.13	Characterization of the sediments of Rayka section	97
3.14	Mass balance calculations for the colloid release experiments	100
3.15	Elemental content of colloids used in the adsorption experiments	103
3.16	Freundlich isotherm parameters for the effect of initial concentration	107
3.17	(a) Freundlich isotherm parameters for the effect of pH (b) Langmuir isotherm parameters for the effect of pH	112
3.18	Comparison of adsorption capacities of various adsorbents	118
3.19	Elemental content of native colloidal particles	121
3.20	Mass balance calculations for the leaching of colloidal particles from soil column	126
3.21	Mass balance calculations for the dye transport experiments at 0.01 M NaCl and 0.001 M NaCl	131

3.22	Mass balance calculations for the alizarin red dye transport experiments at three pH values	134
3.23	Properties of sediment (MJ 52) used in the experiments	139
3.24	Elemental content of colloids of MJ 52 sediment	141
3.25	Freundlich and Langmuir adsorption isotherms for toxic metals	153
3.26	Comparison of adsorption capacities various adsorbents	153
3.27	Characterization of sediment (MD 34)	154
3.28	Elemental content of aggregated colloids of sediment	154
3.29	Release rate coefficient of Cr(VI), Pb(II), Ni(II) and Cu(II)	156
3.30	Mass balance and cumulative mass of Cr(VI) through uncontaminated zone	162
3.31	Characterization of Mini river sediments	167
3.32	Enrichment factor (EF) for Pb, Fe and Ni in river	171
3.33	Igeo classes for Pb, Fe and Ni in river sediments	171
3.34	Permissible limit of contaminants as per EPA	174
3.35	Results of ground water analysis	177
3.36	Results of river water analysis	177
3.37	Porous medium properties used in simulation experiments	184
3.38	Particle size of humic colloids	199
3.39	Adsorption of dyes and Cr(VI) on humic acid (a) Freundlich isotherm parameters (b) Langmuir isotherm parameters	204
3.40	Kinetics of adsorption of alizarin red and methylene blue	207
