

## Table of Contents

| List of abbreviation                                                                                    | I-III |
|---------------------------------------------------------------------------------------------------------|-------|
| 1. Introduction.....                                                                                    | 1     |
| 1.1. History of genesis .....                                                                           | 3     |
| 1.2. Structural debate .....                                                                            | 6     |
| 1.3. Reduced graphene oxide (rGO) and synthesis strategy .....                                          | 12    |
| 1.4. Chemical reactivity of GO .....                                                                    | 13    |
| 1.5. Modification of oxidative functional groups.....                                                   | 14    |
| 1.5.1. Selective modification of epoxy groups .....                                                     | 14    |
| 1.5.2. Selective modification of carboxylic acid groups .....                                           | 15    |
| 1.5.3. Selective modification of hydroxyl groups .....                                                  | 16    |
| 1.6. References .....                                                                                   | 18    |
| 2. Objectives and experimental work.....                                                                | 23    |
| 2.1. Objectives.....                                                                                    | 25    |
| 2.2. Experimental .....                                                                                 | 27    |
| 2.2.1. Materials and methods.....                                                                       | 27    |
| 2.2.2. Synthesis of graphene oxide (GO) .....                                                           | 27    |
| 2.2.3. Functionalization at –OH groups .....                                                            | 29    |
| 2.2.3.1. Preparation of amino functionalized GO<br>(A- <i>f</i> -GO) .....                              | 29    |
| 2.2.3.2. Preparation of Schiff base ligand functionalized<br>GO [(L) <sub>n</sub> - <i>f</i> -GO] ..... | 29    |
| 2.2.3.3. Preparation of catalysts [M(L) <sub>n</sub> - <i>f</i> -GO] .....                              | 30    |
| 2.2.4. Functionalization at –COOH groups.....                                                           | 31    |
| 2.2.4.1. Preparation of chloro functionalized GO<br>(Cl- <i>f</i> -GO) .....                            | 31    |
| 2.2.4.2. Preparation of salen ligand [H <sub>2</sub> L] .....                                           | 32    |
| 2.2.4.3. Preparation of metal-salen complex .....                                                       | 32    |
| 2.2.4.4. Preparation of catalysts [M(L) <sub>n</sub> - <i>f</i> -GO] .....                              | 33    |
| 2.3. Physico-chemical techniques .....                                                                  | 34    |
| 2.3.1. Elemental analysis.....                                                                          | 34    |
| 2.3.2. BET surface area and pore volume analysis .....                                                  | 35    |
| 2.3.3. X-ray powder diffraction studies (XRD) .....                                                     | 37    |

|           |                                                                 |           |
|-----------|-----------------------------------------------------------------|-----------|
| 2.3.4.    | Fourier-transform infrared (FTIR) spectroscopy .....            | 38        |
| 2.3.5.    | Raman spectroscopy.....                                         | 38        |
| 2.3.6.    | Electronic spectra .....                                        | 39        |
| 2.3.7.    | Thermogravimetric analysis (TGA) .....                          | 40        |
| 2.3.8.    | Transmission electron microscopy (TEM) .....                    | 41        |
| 2.3.9.    | X-ray photoelectron spectroscopy (XPS) .....                    | 42        |
| 2.4.      | References .....                                                | 44        |
| <b>3.</b> | <b>Results and discussion .....</b>                             | <b>48</b> |
| 3.1.      | Characterization of –OH functionalized catalysts.....           | 48        |
| 3.1.1.    | FTIR analysis .....                                             | 48        |
| 3.1.2.    | Thermogravimetric analysis.....                                 | 49        |
| 3.1.3.    | UV/Vis. spectroscopy.....                                       | 50        |
| 3.1.4.    | Raman spectroscopy.....                                         | 52        |
| 3.1.5.    | XRD patterns .....                                              | 53        |
| 3.1.6.    | XPS analysis.....                                               | 55        |
| 3.1.7.    | HRTEM analysis .....                                            | 62        |
| 3.1.8.    | ICP-OES analysis .....                                          | 65        |
| 3.1.9.    | BET analysis.....                                               | 65        |
| 3.1.10.   | DFT study.....                                                  | 65        |
| 3.2.      | Characterization of –COOH functionalized catalysts .....        | 69        |
| 3.2.1.    | FTIR analysis .....                                             | 69        |
| 3.2.2.    | Thermogravimetric analysis.....                                 | 71        |
| 3.2.3.    | UV/Vis. spectroscopy.....                                       | 73        |
| 3.2.4.    | Raman Spectroscopy .....                                        | 74        |
| 3.2.5.    | XRD patterns .....                                              | 76        |
| 3.2.6.    | XPS analysis.....                                               | 78        |
| 3.2.7.    | HRTEM analysis .....                                            | 83        |
| 3.2.8.    | ICP-OES analysis .....                                          | 85        |
| 3.2.9.    | NH <sub>3</sub> -TPD study .....                                | 85        |
| 3.2.10.   | DFT study.....                                                  | 86        |
| 3.3.      | References .....                                                | 95        |
| <b>4.</b> | <b>Catalytic aptitude of –OH functionalized catalysts .....</b> | <b>99</b> |
| 4.1.      | Selective oxidation of benzyl alcohol .....                     | 101       |
| 4.1.1.    | Impact of catalysts.....                                        | 102       |

|           |                                                                                                  |     |
|-----------|--------------------------------------------------------------------------------------------------|-----|
| 4.1.2.    | Impact of mole ratio .....                                                                       | 103 |
| 4.1.3.    | Impact of amount of catalyst .....                                                               | 104 |
| 4.1.4.    | Impact of time .....                                                                             | 106 |
| 4.1.5.    | Impact of solvent .....                                                                          | 107 |
| 4.1.6.    | Impact of solvent amount .....                                                                   | 109 |
| 4.1.7.    | Impact of oxidant.....                                                                           | 110 |
| 4.1.8.    | Impact of temperature .....                                                                      | 110 |
| 4.1.9.    | Recyclability test .....                                                                         | 111 |
| 4.1.10.   | Impact of source of raw material.....                                                            | 112 |
| 4.1.11.   | Conclusion.....                                                                                  | 115 |
| 4.2.      | Selective epoxidation of styrene.....                                                            | 116 |
| 4.2.1.    | Impact of catalysts.....                                                                         | 119 |
| 4.2.2.    | Impact of solvent .....                                                                          | 120 |
| 4.2.3.    | Impact of mole ratio .....                                                                       | 122 |
| 4.2.4.    | Impact of amount of catalyst .....                                                               | 123 |
| 4.2.5.    | Impact of solvent amount .....                                                                   | 124 |
| 4.2.6.    | Impact of time .....                                                                             | 125 |
| 4.2.7.    | Impact of oxidant.....                                                                           | 127 |
| 4.2.8.    | Impact of temperature .....                                                                      | 128 |
| 4.2.9.    | Leaching and recyclability test.....                                                             | 129 |
| 4.2.10.   | DFT Study .....                                                                                  | 131 |
| 4.2.11.   | Plausible reaction pathway of peroxidative epoxidation of<br>styrene over VOL- <i>f</i> -GO..... | 139 |
| 4.2.12.   | Corroboration of the formation of peroxo-vanadium<br>species .....                               | 140 |
| 4.2.12.1. | UV/Vis. spectroscopy.....                                                                        | 141 |
| 4.2.12.2. | Raman Spectroscopy .....                                                                         | 142 |
| 4.2.13.   | Conclusion.....                                                                                  | 144 |
| 4.3.      | Selective epoxidation of norbornene .....                                                        | 145 |
| 4.3.1.    | Impact of catalysts.....                                                                         | 147 |
| 4.3.2.    | Impact of mole ratio .....                                                                       | 148 |
| 4.3.3.    | Impact of amount of catalyst .....                                                               | 149 |
| 4.3.4.    | Impact of solvent .....                                                                          | 150 |
| 4.3.5.    | Impact of solvent amount .....                                                                   | 152 |

|                                                                      |            |
|----------------------------------------------------------------------|------------|
| 4.3.6. Impact of time .....                                          | 153        |
| 4.3.7. Impact of oxidant.....                                        | 154        |
