

List of Tables

2.1	Masses and equilibrium radii of superdense star models corresponding to $K = 2$, $\rho(a) = 2 \times 10^{14} gm/cm^3$	29
4.1	The Values of the integral on the right side of the pulsation equation (4.3.5) for some specific choices of the constants a_1 , b_1 with $\frac{m}{a} = 0.27$	59
5.1	Masses and equilibrium radii of core-envelope model - 1 of superdense stars corresponding to $\rho(0) = 4.68 \times 10^{15} gm/cm^3$	68
5.2	Masses and equilibrium radii of core-envelope model - 2 of superdense stars corresponding to $\rho(0) = 4.68 \times 10^{15} gm/cm^3$	68
6.1	Values of physical parameters for different radii with $p_0 = 0.36$	83
