

CONTENTS

Chapters	Description	Page No.
<hr/>		
	List of symbols	(i) - (iii)
Chapter 1	Introduction	... 01-19
1.1	Motivation and Brief Review of Literature	... 2
1.2	Investigated Problems of the Thesis	... 9
1.3	Scope of the Present Work	... 14
1.4	References	... 15
Chapter 2	Physico-Mathematical Background	... 20-54
2.1	Basic Definitions from Fluid Mechanics, Porous Medium and Physics	... 21
2.1.1	Definitions from Fluid Mechanics	... 21
2.1.2	Definitions from Porous Medium and Darcy's Law	... 24
2.1.3	Definitions from Physics	... 25
2.2	Relationship between Pressure Gradient and Shear Stress	... 27
2.3	Brief Review of Fluid Mechanics with Basic Equations	... 30
2.3.1	Equation of Continuity	... 31
2.3.2	Navier-Stokes Equation	... 35
2.4	Various Types of Lubrication	... 40

2.4.1 Basic Assumptions of Lubrication Theory	... 42
2.5 Bearing types	... 43
2.6 Brief History about Development of Ferrofluids	... 47
2.7 Basic Flow Equations for the Present Study	... 50
2.8 References	... 52
Chapter 3 Two Porous Layers Slider Bearing with a Convex Pad Upper Surface Considering Slip and Squeeze Velocity	... 55-72
3.1 Introduction	... 56
3.2 Formulation of the Mathematical Model	... 57
3.3 Solution	... 65
3.4 Results and Discussion	... 66
3.5 Conclusions	... 67
3.6 Figure	... 69
3.7 Tables	... 70
3.8 References	... 71
Chapter 4 Squeeze film characteristics between a sphere and a flat porous plate	...73-102
4.1 Introduction	... 74
4.2 Development of the Mathematical Model	... 76
4.3 Solution	... 82

4.4	Results and Discussion	... 84
4.4.1	Discussion on Squeeze Film Pressure	... 84
4.4.2	Discussion on Load Carrying Capacity	... 85
4.4.3	Discussion on Squeeze Film Time	... 86
4.4.4	Representative Values and Calculation of K	... 87
4.5	Conclusions	... 88
4.6	Figures	... 90
4.7	References	... 100
Chapter 5	Porous Infinitely Long Rectangular Plates Squeeze Film-Bearing	... 103-122
5.1	Introduction	... 104
5.2	Mathematical Model and Its solution	... 106
5.3	Results and Discussion	... 113
5.4	Conclusions	... 115
5.5	Figures	... 116
5.6	Table	... 119
5.7	References	... 120
Chapter 6	Porous Truncated Cone Squeeze Film-Bearing with Different Porous Structures	... 123-139
6.1	Introduction	... 124
6.2	Mathematical Formulation of Globular Sphere - Permeability Model	... 125

6.3	Calculation of Load Carrying Capacity	... 130
6.4	Mathematical Formulation of Capillary Fissures - Permeability Model	... 131
6.5	Results and Discussion	... 132
6.5.1	Comparison between Globular Sphere and Capillary Fissures Models of truncated cone with other bearing designs	... 133
6.6	Conclusions	... 134
6.7	Figures	... 135
6.8	Tables	... 137
6.9	References	... 138
	List of Presented Papers	... 140
	List of Published Papers	... 141
