

List of Tables

Table 1.1: Physical properties and Chemical composition of Soda-lime glass.

Table 3.2: Sheet Resistance of Mo thin films at room temperature.

Table 3.3: Crystallite size and strain (%) of Mo thin films at the substrate temperature of 215 °C.

Table 3.4: Sheet Resistance of Mo thin films at Substrate Temperature 215 °C.

Table 3.5: Sheet Resistance and Crystallite size of bilayer Mo thin films for different thicknesses.

Table 3.6: Operating Optical Characteristic of Nd: YAG Pulsed Fiber Laser.

Table 4.1: Elemental Composition of all CIGS thin film deposited at various deposition parameters.

Table 4.2: List of Annealing Profiles for CIGS phase formation.

Table 4.3: Elemental composition analysis of SLG/Mo/CIGS Annealing Profile.

Table 5.1: Urbach Energy, Steepness parameter, Light and Dark Resistivity of CdS thin-film.

Table 6.1: Urbach energy or ‘tail width’ of i-ZnO thin films at different deposition conditions.

Table 6.2: Electrical resistivity, Hall Mobility, and Carrier concentration of AZO thin films deposited at P_{RF} 100W.

Table 7.1: Deposition Technique, Temperature, and Thickness of functional layers of CIGS Solar cell module.

Table 7.2: The performance parameters have been extracted from the above I-V curves
