

ACKNOWLEDGEMENTS.....

Finally reaching at this stage, when I sit back to take some time and look back at this wonderful journey, I realise this milestone called "PhD" was unattainable without the support of these people in my life. It was because of my love for the research in science that has led me to this place, I have felt the joys of happiness, success, wonder in achieving the targets while also facing the disheartenment in the failures but never was I demoralised as there was always someone around me to uplift my spirits, show me the silver lining around the dark clouds and cheer me up with new tactics. I am sincerely grateful to these people who have been my support through all the tough times since the moment they entered the journey of my life called PhD.

I sincerely express my regards to **Prof. G. Archana**, my PhD guide, for her untiring support throughout this time. It was only you who took me under your wings when there was no hope. You have been my mentor in not only my studies but have also been an elder to me throwing light on my weaknesses, pulling me forward, pushing me even further to face new challenges which I could never think of doing on my own. You allowed me the freedom to work on my ideas and have been the ray of light, who always had the solution for any problem I come to you for and have been my inspiration to work harder and learn more. I always learned something new from our discussions and returned with a new zeal for working on the problems. You have always told me don't just say 'I will try', say 'I will do it'. It was only because of your encouragement and faith in me that I could travel Aizawl alone and return back with the 'First prize' award for our work presented at the conference. Without you mam, this achievement in life was impossible. Yourself and Naresh sir have granted us the honour of coming together outside the work premises as well along with family and friends, which has helped open up my reserved nature. Sir, who apart from being a member of my doctoral committee, have also encouraged me always to discuss my work with people to learn new ways to look at the things from a different angle. Both of you have been an inspiration for hard work while also living the life to the fullest.

I am thankful to Archana mam as the Head of the Microbiology and Biotechnology Department for providing us the facilities to work, new instruments and giving us the opportunity and encouragement to interact with several scientists in the field of science by organising several conferences and guest lectures each year.

I am also thankful to Prof. T. Bagchi and the previous heads of our department for providing us with an excellent infrastructure and research facilities to carry out the scientific work.

I am sincerely thankful to Prof. G. Naresh Kumar, Prof. Anuradha Nerurkar, Prof. Sanjay Ingle, as the member of my Doctoral advisory committee, for your valuable inputs during our discussions on my work progress. I extend my thanks to Dr. Nandita Baxi, Dr. Devarshi Gajjar, Late Prof. J. Manjrekar, Dr. Mrinalini Nair, Dr. Pranav Vyas, Dr. Ratika Shrivastava, Dr. Rajesh Patkar and Dr. Pushpendra. Singh for your valuable inputs and suggestions during the work presentations and things I got to learn from you during my PhD.

I express my heartfelt gratitude to Dr. Dhanesh Patel who encouraged me to join MSU for pursuing PhD. His faith in me gave the confidence to embark on this remarkable journey of my life.

I am thankful to all the non-teaching staff who have been a great and friendly support to me, looking out for me always and helping out in their own way in solving any official problems come

what may. I am sincerely thankful to Shirish sir, you were always ready to help us going out of your way and pulling your sources to help everybody. Without your support I could never have managed any of the official paper work or even my scholarship programme. Pravin sir was always there for all of us ever ready for any help we seek, he has never said no and has treated like an elder, looking out for me in this new place. Mandvekar sir has been like a secret Wikipedia or a treasury for any experimental problems or availability of any reagent. Talati sir has always helped me to learn sourcing out ways to obtain the reagents which were not commonly available while also exchanging new ideas for sorting lab related problems. Seema mam shall always be the smiling face who greeted with a happy 'kem cho' whenever we came across, never letting me go empty handed for any glassware that I needed or any other reagent, with an ever-ready mood to talk about any thing I wanted to share. Whatever little interaction I had with Thomas mam has been imprinted on my mind with her beautiful smile and her giving out nature. I will always miss the cakes she brought for all of us on Christmas which still instigates me to go looking for them on the occasion. Harsukh sir has been more like a friend to me with a guiding and helping hand whenever I felt helpless and in trouble. Panchal sir, Nitesh sir, Vaghese sir, Nair have always looked for me in and out of the department even without me asking them first, always considering a part of the department. Pradeepbhai, Jayeshbhai, Nileshbhai, Chimanbhai, Rameshbhai, Girishbhai, and Mukeshbhai all of you are an indispensable part of our department, it was because of you all that I never felt out of place nor helpless in any situation and at every occasion we celebrated together. My heartfelt thanks to all of you for making me a part of the institution. I am also grateful for all the staff at the Faculty of Science and the University administration office for timely support in the official matters which have always been a difficult part for me.

My dissertation students have been an indifferentiable part of my PhD, they have taught me the meaning of being a teacher while treating me as an elder sibling and even true friends whether in the lab or not. Ishita, Shraddha and Megha have been true friends to me sharing all the joys and sorrows of their life while helping me out in their own resourceful ways and sharing our success or failure together. Raza was always a younger brother to me who was not just a student but my teacher at majority of the times. Taniya, Ankita and Vikas shared the least period of time with me as part of their dissertation but those have been equally valuable to me. All of you shall always be a source of pride to me and I am thankful to you for bringing me an unforgettable and happiest experience during this journey of my life.

Research Lab II, the place I called home away from home, where I have spent the maximum number of waking hours during all these years. It was not just the research that I have enjoyed in this lab but all the friends it gave me as well. Aparna Mam, I can never thank you enough for being the motherly and friendly voice, always looking out for me, and helping me out in the work-related difficulties. You have been the longest association for me in this lab and the most experienced person around me, you share my uttermost respect as an elder and a friend. I was introduced to everybody in this lab by my seniors Dr. Murli Sharaaff and Dr. Ruchi Chaturvedi who have been my support in learning the ways to work in a research lab, being ever ready to solve any query I had. Dr. Krushi Hingurao has always taught me to work sincerely when in lab and spend an equal amount of time with the family. Mrs. Kinnary Iyer my first friend in the lab and an equally beautiful soul on the inside. All of you have been a source of inspiration for me in so many ways. My closest friends have been Dr. Vihang Thite and Ms. Swati Telang who will always be among the closest to my heart. I have always looked up to Vihang whenever there was any problem during the work and his advice, the daytime talks we all shared, the experiences he shared and all of his

inside stories. He has always been the 'Go to' guy for everybody in the department and a solid personality when protecting us. Swati has been my soulmate, my partner in crime, my source of happiness in difficult times. It is never gonna be enough to talk about you guys and I can never thank you enough for making me a part of your life. Mr. Mihir Sarang has been a good friend to me, looking out with his unusual ideas and angle to view the life and its difficulties. Ms. Roshni Patel was never a junior to me, I am thankful to her for being the friendly and smiling face throughout the day, always like another myself but a far intellectual one. Ms Abhi Shah was never just a colleague, working under the same guide, I have always looked up to her as an inspiration, an intelligent and friendly person who could never say 'No'. Our life in RL2 was always full of fun, our choti-choti parties, picnics and chai-time get-togethers made all the ups and downs during these years memorable as well. My lab experiences would be incomplete without the inputs from our young scientists Mr. Ajinkya Thakare and Ms. Shivani Raval who have inspired me, looked up to me for suggestions and enthusiastically listened to our experiences. The dissertation students of our lab shall always be a part of this RL2 family and I am sincerely thankful to each and every person for making a part of it.

I have been grateful to this department for allowing the students from different backgrounds and working on different projects to work closely with each other and interaction has always been encouraged in this place. I am thankful to my seniors and colleagues working under Archana mam - Dr. Subrahmanyam Gangavarappu, Dr. Rakesh Sharma, Dr. Priya Pillai, Dr. Jagat Rathod, Dr. Jitendra Gosai, Dr. Janki Patel, Ms. Siddhi Vora, Ms. Juliya Thomas and Ms. Shubhangi Pandey. I am thankful to all the research students in this department who shared valuable interactions with me during my tenure at the department.

I am thankful to the University Grants Commission for providing me with the Research Fellowship in Science for Meritorious Students (RFSMS) under the BSR scheme for my Research work.

I am indebted to my parents Dr. Dinesh Chand Agrawal and Ms. Manju Agrawal and my family for their cooperation and constant support, encouraging me, showing a full-time patience and letting me be 'Me'. Without you, I could not have achieved this milestone. My family has always encouraged me as their pride and strengthened my hope to complete this PhD. I cannot thank enough to my younger brother (Dr.) Bhavesh Agrawal who shares with me the zest for scientific approach in life while our non-sensical and scientific discussions have always been out of league for everybody else. You and mom are more than a family, my buddies and my teachers, nothing I mention can be said enough for your contributions. I am forever thankful to the Almighty for being the voice in my heart and for giving me so much in this life.

Mansi Agrawal
