

## **ACKNOWLEDGMENTS**

---

First and above all, I praise God, the almighty for providing me this opportunity and granting me the capability to proceed successfully. This piece of work will never be accomplished without His blessings. This thesis appears in its current form due to the assistance and guidance of several people. I would therefore like to offer my sincere thanks to all of them.

I would like to express my sincere gratitude to my supervisor, advisor and mentor, Professor Arun Pratap, for his continuous support in my Ph. D. study and related research, for his patience, motivation, and critical comments. I thank him for all of the opportunities I was given to conduct my research and further my thesis. I could not have imagined having a better advisor and mentor for my Ph. D. study. His vision of a research problem and ways to tackle them helped me a lot during my research work. He provided me with the tools that I needed to choose the right direction and successfully complete my thesis. His insightful comments and encouragement incited me to widen my research from various perspectives.

My warm and loving thanks go to Miss. Sonal Prajapati, my friend and colleague, for her generous support during my research work. She has pleasantly offered her help and support in my research work. Without her precious support it would not be possible to conduct this research. It would have been lonely in lab without her.

I express my sincere thanks to Ashmi T. Patel, Prapti Pandya and Purvi Bhatt, my senior colleagues, for their motivational support and enthusiasm.

I am truly thankful to Dr. B. S. Chakrabarty, Head of Applied Physics Department, for his motivational support.

I express my deep sense of gratitude to Dr. S. Kahar, Associate Professor in Department of Metallurgy, Faculty of Technology & Engineering, for his advice, invaluable help and support during my research work.

My sincere gratitude goes to every faculty and staff member of the Applied Physics Department who helped me lot in various ways.

The thesis would not have been possible without the confidence, endurance and support of my family. I thank my entire family for their wise counsel and sympathetic ear. They have always been there for me. My parents have always been a source of inspiration and encouragement. I wish to thank my parents for their love, unconditional support and freedom to pursue my interests. My parents, Mr. K. P. Dwivedi and Mrs. Subhadra Dwivedi, have always been my backbone, my patience and strength. They have always showed me the correct path in my tough time. I can't express my feelings for them in mere words. Their immense love and blessings have made me complete my Ph. D.

I devote my loving and warm thanks to Mr. Shivendra Choubey, my husband, for his constant support, valuable ideas and patience. I admire him a lot for his affection and trust in me. He was always there cheering me up and stood by me through the good times and bad. Without his love and support I would not be able to complete my doctoral work.

My special thanks to Swati and Praveen, my siblings, for providing me lively atmosphere, assistance and strength whenever required. They have been a big source of enthusiasm for me.

I sincerely thank my in-laws, Mr. R. P. Choubey, my father-in-law, and Mrs. Asha Choubey, my mother-in-law, for their perpetual support and understanding. It is their love and blessings, so that I can pursue and finish my research work.

Finally, there are my friends in the department, especially Laxmi and Piyush, who were always willing to help and give their best suggestions. We were not only able to support each other by deliberating over our problems and findings, but also by happily talking about things other than just our papers. Last but not the least, I offer my regards and wishes to all those who supported me in any respect during the completion of my work.

Thank you very much, everyone!

Supriya Kasyap
