

## LIST OF TABLES

Table No.	Name of Tables	Page No.
3.1	Specifications of Sentinel-1 and Sentinel-2 products used over Kerala.	28
3.2	Specifications of Sentinel-1 and Sentinel-2 products used over Assam.	28
3.3	Data characteristics of Cartosat DEM and Sentinel-2 data used in the study.	29
4.1	Selected Curve Number values for the study area using TR-55 table.	36
4.2	Linear, relief and shape morphometric parameters.	39
4.3	Annual standardized precipitation index given by McKee et al., (1993).	41
4.4	Recommended standard deviations ( $\sigma$ ) away from the mean TPI raster as threshold values for classifying six slope positions	43
4.5	Pairwise comparison scale for AHP preferences.	46
4.6	Metadata of the satellite data.	55
4.7	Determination of the ranges of different surface temperature intervals.	56
5.1	Slope classification as per Brazilian agricultural research corporation standards.	64
5.2	Statistics for ASTER, SRTM, and Cartosat derived elevation.	69
5.3	Normality test results.	71
5.4	Wilcoxon signed ranks test assuming the median of differences between Cartosat and ASTER, and Cartosat and SRTM equals 0.	71
5.5	Correlation coefficients for ASTER, SRTM, and Cartosat derived elevation.	71
5.6	Covariance (Correlation) matrix of sentinel-2 bands.	77
5.7	Total Variance Explained.	78
5.8	Factor loading component Matrix.	78
5.9	Accuracy assessment of traditional and PCA based approach for LULC classification using MLE, RF, and SVM classifiers.	81
5.10	Resulted Curve Number II statistics using traditional and PCA based approach classification.	84
5.11	Computed stream order, stream number, stream length and bifurcation ratio.	87
5.12	Flood influencing characteristics of the five sub-watersheds of the Vishwamitri watershed.	93
5.13	Prioritization of sub-watersheds based on compound value.	93
5.14	Classification of annual rainfall based on SPI.	94
5.15	Slope classifications using TPI as basis of landform classification for the study area.	96
5.16	Resulting weights for the criteria based on pairwise comparisons.	102
5.17	Quantitative evaluation of the filters over Kerala.	112
5.18	Quantitative evaluation of the filters over Assam.	112
5.19	Comparison of user's accuracy (UA), producer's accuracy (PA), overall accuracy (%), and kappa coefficient using random forest tree and support vector machine algorithms for VV and VH polarization over Kerala region.	119
5.20	Inundated area statistics of RF and SVM over cloud-free optical data for Kerala region.	119
5.21	Comparison of user's accuracy (UA), producer's accuracy (PA), overall accuracy (%), and kappa coefficient using random forest tree and support vector machine algorithms for VV and VH polarization over Assam region.	119
5.22	Inundated area statistics of RF and SVM over cloud-free optical data for Assam region.	119
5.23	Precipitation data and Thiessen weightage factor.	121
5.24	Calculation of Thiessen mean.	121
5.25	Estimated Daily runoff for the period 30-07-2019 to 03-08-2019 using weighted CN.	122
5.26	Reduced Mean $\bar{Y}_n$ in Gumbel's Extreme Value Distribution.	123
5.27	Reduced Standard Deviation $S_n$ in Gumbel's Extreme Value Distribution.	123

5.28	Observed peak flow data at Kalaghoda Bridge.	124
5.29	Magnitude of flood for different return period calculated using Gumbel's flood frequency method.	125
5.30	Inundation statistics for the Vadodara city.	127
5.31	Flood hazard classification based on water depth according to the MLIT.	127
5.32	Calculated area and percentage of each temperature class for summer and winter.	128
5.33	The calculated land contribution indexes of each land cover types.	135
5.34	The calculated landscape index of sink and source landscapes.	135
5.35	Administrative wards with green spaces requirement.	136
5.36	Calculated bias and RMSE of the predictive models.	136
