

List of Figures

Figure 1.1 “Internet of Things” paradigms as a result of the convergence of different visions.....	02
Figure 1.2 IoT based Health monitoring Architecture.....	03
Figure 1.3 Cloud computing as on demand service.....	04
Figure 1.4 Fog Computing Architecture.....	06
Figure 1.5 The use case of daily monitoring for provisioning timely healthcare services with low latency.....	08
Figure 1.6 The process of Smart allocation from fog to cloud environment.....	11
Figure 1.7 Scope of the Research work.....	19
Figure 3.1 Einthoven’s Triangle.....	39
Figure 3.2 ECG signal with noise.....	40
Figure 3.3 Denoised ECG signal after applying Savitzky-Golay Filtering.....	41
Figure 3.4 AD8232 Functional Block diagram.....	41
Figure 3.5 Complete ECG Wave with intervals.....	43
Figure 3.6 ECG wave as discrete signal recorded with AD8232 and after ADC by Arduino.....	44
Figure 3.7 Final Output window showing ECG interval and its normality.....	46
Figure 3.8 ECG signals from all five categories.....	47
Figure 3.9 System architecture of ECG image classification using Deep Learning Approach.....	49
Figure 3.10 Cloud computing and Fog Computing based Health Care System.....	50
Figure 3.11 ECG Analyzing System interface on Cloud Computing.....	54
Figure 3.12 ECG Analyzing system interface on Raspberry Pi as a Fog Computing Node.....	55
Figure 3.13 SMS responses for the Fog Computing and the Cloud Computing.....	55
Figure 3.14 Transmission Delays of Fog and Cloud Computing.....	58
Figure 3.15 Computation delay of Fog and Cloud computing.....	59
Figure 3.16 Response time of Fog and Cloud Computing.....	60
Figure 3.17 Standard Deviation of different Parameters.....	61
Figure 4.1 Raspberry Pi Cluster used in the system.....	65
Figure 4.2 ECG wave with PQRSTU reference points and different intervals.....	66
Figure 4.3 Dispy: working mechanism.....	67
Figure 4.4 The output of dispy system.....	68
Figure 4.5 Dispy System Analogy.....	69
Figure 5.1 ECG signal processing using two ECG waves in one sub job.....	78
Figure 5.2 ECG signal processing using four ECG waves in one sub job.....	79
Figure 5.3 ECG signal processing using eight ECG waves in one sub job.....	80
Figure 5.4 ECG signal processing using ten ECG waves in one sub job.....	80
Figure 5.5 ECG signal processing using response time criteria.....	85
Figure 5.6 ECG signal processing using CPU usage criteria.....	87
Figure 5.7 ECG signal processing using available main Memory criteria.....	90
Figure 5.8 ECG signal processing using a number of Cores criteria.....	91
Figure 5.9 ECG signal processing using OptiFog Algorithm.....	95
Figure 5.10 ECG signal processing by dispy system.....	97
Figure 5.11 ECG signal processing by OptiFog Algorithm.....	98

Figure 5.12 Percentage of improvement in the given test case	98
Figure 5.13 Running Deca waves using OptiFog Algorithm.....	99
Figure 6.1 Multilevel Fog Nodes scenario with IoT and Cloud Servers.....	108
Figure 6.2 Security algorithm for H2, V2, and higher levels.....	117
Figure 6.3 RSA Public-Private Key-pair Generation time.....	119
Figure 6.4 Comparing conversion times of different devices for different data lengths.....	120
Figure 6.5 comparing time complexities of various algorithms.....	120
Figure 6.6 Comparing space complexities of different algorithms.....	121
