Synopsis	iv
Acknowledgements	xiv
1 Introduction	1
1.1 General	1
1.2 State-of-the-Art	3
1.2.1 Limitation of Demand Side Management	4
1.2.2 Compliance through Electrical Spring	5
1.2.2.1 Classification of <i>ES</i>	8
1.3 Motivation	10
1.4 Thesis Organization	14
2 Fundamentals of Electric Spring and its System Design	16
2.1 Introduction	16
2.2 Impact of Integration of Renewables	17
2.3 Concept of Electric Spring	17
2.3.1 Evolution and Configurations of Electric Spring	19
2.3.2 Precursor on the Control of Electric Spring	20
2.4 System of Electric Spring	20
2.4.1 Model Intricate and Uncertainties	21
2.4.2 Model of Electric Spring	22
2.5 Design Consideration of Electric Spring Acting as an Inverter	25
2.5.1 Selection of switching frequency	25
2.5.2 Design of DC Bus	26
2.5.3 Design of Output Filter	26

2.5.3.1	Inductor Design	27
2.5.3.2	Design of Capacitor	28
2.5.4	Results of Inverter Design	28
2.6	Model of the Grid	30
2.7	Experimental Arrangement for Testing the Performance of the system of <i>ES</i>	33
2.8	Conclusion	35
3	Reference Tracking in Electric Spring and Phase Locked Loop Structures	37
3.1	Introduction	37
3.2	Application of <i>PLL</i> in Power System	38
3.3	State-of-the-Art in Frequency and Phase Measurement for Power System Application	39
3.4	Requirement of <i>PLL</i> Structures for the Application with Electric Spring .	40
3.5	Experimental Test System for <i>PLL</i>	41
3.6	<i>PLL</i> Structures for Electric Spring	42
3.6.1	T/3 Delay <i>PLL</i>	43
3.6.2	Single-Phase Synchronous Reference Frame <i>PLL</i> using Second Order Generalized Integrator as Orthogonal Signal Generator	43
3.6.2.1	Second Order Generalized Integrator as Orthogonal Signal Generator	46
3.6.2.2	Controller Design for <i>PLL</i> Structure	47
3.6.2.3	Results of Second Order Generalized Integrator- <i>PLL</i> . . .	52
3.6.3	Enhanced-Phase Locked Loop Structure	55
3.6.3.1	Results of Enhanced-Phase Lock Loop Structure	57
3.7	Comparison of the Results	61
3.7.1	Start-up Delay	61
3.7.2	Step Change in the Magnitude of the Input	62
3.7.3	Step Change in the Frequency of the Input	63
3.7.4	Step Change in the Phase of the Input	65
3.7.5	Applying Step Change to the Amplitude and frequency of the Input	65
3.7.6	<i>PLL</i> Subjected to Harmonics	66
3.8	Conclusion	68

4	Control of Electric Spring: A Proportional Integral Controller Compensated Approach	69
4.1	Introduction	69
4.1.0.1	State-of-the-art in Control of <i>ES</i>	70
4.2	Control of Electric Spring using a <i>PI</i> Controller	70
4.2.1	Design of <i>PI</i> Controller	71
4.2.2	Result Analysis of <i>PI</i> Controlled <i>ES</i>	74
4.3	Cascade Control of Electric Spring	78
4.3.1	Design of <i>PI</i> Controllers used for the Cascaded Control of <i>ES</i>	79
4.3.2	Results of Cascaded <i>PI</i> Controlled <i>ES</i>	81
4.4	Comparison of the Results and Conclusion	87
5	Control of Electric Spring: A Lead-Lag Controller Compensated Approach	91
5.1	Introduction	91
5.2	Control of Electric Spring using a <i>Lead-Lag</i> Controller	93
5.2.1	<i>Lead-Lag</i> Controller Design	93
5.3	Implementation of <i>Lead-Lag</i> Compensator with Sinusoidal Pulse Width Modulation Control of Electric Spring	96
5.3.1	Analysis of the Results	97
5.4	Control of Single Phase Electric Spring through Space Vector Modulation	103
5.4.1	Analysis of the Results	104
5.5	Comparison of the Results achieved through Sinusoidal Pulse Width Modulation and Space Vector Pulse Width Modulation	111
5.6	Conclusion	113
6	Robust State-Feedback Control of Electric Spring: Linear Matrix Inequality Approach of Linear Quadratic Regulator Design	115
6.1	Introduction	115
6.2	Precursors of the Optimal Control of Electric Spring using Linear Quadratic Regulator	117
6.3	Model intricate of the System of Electric Spring	117
6.3.1	State Feedback Control of Electric Spring	120

6.4	Design of Optimal Linear Quadratic Regulator for State-Feedback Control	121
6.4.1	Cyclic Design	122
6.4.2	Optimal Linear Quadratic Regulator	123
6.4.3	LQR Design using Linear Matrix Inequalities	123
6.5	Experimental Arrangement for Testing the Performance of Electric Spring	125
6.6	Analysis and Evaluation of Results	126
6.6.1	Frequency Response Analysis	126
6.6.2	Step Response Analysis	127
6.6.3	Performance Analysis of Test-Bench	128
6.7	CONCLUSION	135
7	Comparative Performance Analysis of Controllers	136
7.1	Introduction	136
7.2	Performance Comparison of the PI , $Cascaded-PI$, $Lead-Lag$ and Optimal- LQI Controllers	137
7.3	Testing the Robustness of PI , $Cascaded-PI$, $Lead-Lag$ and Optimal- LQI Controllers	144
7.4	Performance Analysis of Robustness	148
7.5	Conclusion	150
8	Conclusion and Future Work	151
8.1	General	151
8.2	Summary of the Important Findings	152
8.3	Scope for Future Research	156
