Synopsis	iv
Acknowledgements	xii
1 Introduction	1
1.1 General	1
1.2 Scope of Work	3
1.3 Thesis Outline	7
2 Background	9
2.1 General	9
2.2 Condition Monitoring and Life Assessment of Transformer	10
2.3 Operating stresses on Transformer	11
2.3.1 Thermal stresses	12
2.3.2 Chemical stresses	12
2.3.3 Electrical stresses	12
2.3.4 Mechanical stresses	13
2.4 Mechanical Mode of Failure due Electromagnetic forces	14
2.4.1 Core Type Transformer	15
2.4.2 Shell Type Transformer	15
2.4.3 Radial forces	16
2.4.4 Axial forces	18
2.5 Techniques for assessment of mechanical condition of transformer	22
2.5.1 Short circuit Impedance or Leakage Reactance	23
2.5.2 Magnetizing or no-load excitation current	25
2.5.3 Winding capacitances	27

2.6	Conclusion	29
3	Digital signal Processing Method applied for Condition Monitoring of Transformer	32
3.1	Introduction	32
3.2	Detection of incipient turn to turn fault by wavelet analysis of impulse neutral current	33
3.2.1	The Discrete Wavelet Transform (DWT)	34
3.2.2	DWT analysis of neutral current waveform	36
3.2.3	Finding from Analysis of waveform	38
3.2.4	Limitation of the method	38
3.3	Impedance measurement in frequency range from 10 kHz. up to 10 MHz.	38
3.3.1	Impedance measurement During short circuit test of transformer	39
3.3.2	Case Studies of faulty transformers after Short circuit test in Laboratory	40
3.3.3	Case studies of Aged Transformer in Feild	41
3.3.4	Limitation of the method	45
3.4	Detection of Multiple faults in Transformer by SFRA	46
3.4.1	Failure of transformer detected by SFRA	47
3.4.2	SFRA History	56
3.5	Conclusion	58
4	Basic of SFRA	59
4.1	Introduction	59
4.2	Circuit Theory of SFRA	59
4.2.1	RLC Networks and Resonant Frequency	61
4.2.2	Time and Frequency Domains	63
4.2.3	Two Port Networks	64
4.2.4	Transfer Function	65
4.3	Application of SFRA in Power Transformers	67
4.3.1	Self Inductance	68
4.3.2	Mutual Inductance	70
4.3.3	Series Capacitance	70

4.3.4	Shunt capacitance	73
4.3.5	Low and High Frequency model	75
4.4	Methods of SFRA Measurement	77
4.4.1	Voltage Transfer Measurement:	77
4.4.1.1	High-Voltage Winding	78
4.4.1.2	Low-Voltage Winding	79
4.4.1.3	Inter-Winding	80
4.4.1.4	Series and Common Winding	80
4.4.2	Impedance Measurement	81
5	Modelling of Transformer winding for Interpretation of SFRA	83
5.1	Introduction	83
5.2	Basic Circuit of Transformer	84
5.2.1	Low frequency model	84
5.2.2	Mid Frequency model	85
5.2.3	High frequency model	90
5.3	Method of Interpretation	92
5.3.1	Phase to Phase Comparison	92
5.3.2	Sister Unit Comparision	96
5.3.2.1	Comparison of SFRA plot of two sister unit	96
5.3.2.2	Comparison of SFRA plot of multiple sister unit	97
5.3.2.3	Auto- Correlation Method for Data Comparison	99
5.4	Conclusion	101
6	Variation in SFRA plot due to design and external parameter	102
6.1	Introduction	102
6.2	Effect of Oil-Comparision of SFRA plot for Sister unit with full and partially filled oil	103
6.3	Variation in SFRA due to Residual Moisture of Winding	104
6.4	Variation in SFRA plot due to Residual Magnetism of the Core	111
6.5	Variation in Contact Resistance and Earth Resistance	116
6.6	Effect on SFRA plot due to Electrical Interfrence in Substation	118

7	Classification of fault by Sweep Frequency Response Analysis	122
7.1	Introduction	122
7.2	Interpretation of SFRA for fault classification	122
7.3	Low frequency response	124
7.3.1	Core Fault:	125
7.3.1.1	Unintentional core ground	126
7.3.1.2	Shorted lamination providing additional eddy current loss	127
7.3.2	Shorted turn Fault	131
7.3.3	Open turn or High impedance Fault	133
7.4	Mid-Frequency Response	137
7.4.1	Hoop Buckling of LV winding	138
7.4.2	Prediction of Incipient Fault by SFRA in mid-frequency	139
7.4.2.1	Analysis of SFRA Data	141
7.4.2.2	Capacitance and excitation current test data	159
7.5	High-Frequency Response	160
7.6	Overall Frequency Variation of SFRA	161
7.7	Conclusion	169
8	Expert System for SFRA Based on ANN	170
8.1	Introduction	170
8.2	Basic of ANN	171
8.2.1	The Artificial Neuron	171
8.2.2	Feed-forward Neural Networks	172
8.2.3	Learning Rules and Training Algorithms	173
8.3	Configuration of ANN for application in SFRA	174
8.3.1	Input -Output Data Series	175
8.3.2	Multi Layer Feedforward Network with Back-propagation Training Algorithm	175
8.3.3	Feedforward Neural Networks	178
8.4	Field data collection and classification of DATA	179
8.5	Classification of Fault by ANN	179
8.5.1	Shorted turn or Core related Fault (NNET1)	180
8.5.2	High winding Impedance Fault (NNET2)	183

8.5.3	Winding deformation in mid frequency range (<i>NNET3</i>)	184
8.5.4	Winding deformation in high frequency range(<i>NNET4</i>)	186
8.6	Conclusion	191
9	Conclusion	192
9.1	General	192
9.2	Summary of Important Findings	194
9.3	Scope for Further Research	195
	Bibliography	196
