1. Overview	1 - 7
2 Active Power Filter: Configurations and Control Strategies	8 - 26
2.1 UCI control	8
2.2 SLMC and PI controller	10
2.3 3D space vector modulation	13
2.4 Hybrid Active Filter	16
A. Harmonic-Extracting Circuit	18
B. Gain-Adjusting Circuit	18
2.5 Combined Configuration: Shunt Passive and Series Active Filters	19
2.6 Unified Power Quality Conditioners (UPQC)	21
2.7 VS-APF using Multi-stage converter and DC-link.	22
• Basics of Multi-stage converters	23
• Active Filter Configuration	24
3 Active Power Filters: Applications and Design	27-58
3.1 Harmonic Compensation in Power Systems	27
3.2 APF Employing a Dead Beat Control	29
3.2.1 Shunt Active Power Filter	30
3.2.2 APF Implementation	31
3.3 APF Controller: DSP Implementation	32
3.3.1 Control Algorithm	33
3.4 Controller for Hybrid APF: Parallel Connection	36
3.4.1 Principles of operation	36
3.4.2 Control Circuit	37
3.5 APF for Harmonic Damping in a Power Distribution System	38
3.5.1 Experimental System	40

Table of Contents

3.6	<i>Cooperative Control of Shunt APF for Harmonic Damping</i>	43
3.6.1	<i>Review of APF Based on Voltage Detection</i>	44
3.6.2	<i>Feeders Under Fault Conditions</i>	45
3.6.3	<i>Communication System</i>	46
3.6.4	<i>Setup: Two Active Filters on the Same Bus</i>	48
3.6.5	<i>Setup: Two Active Filters on Different Buses</i>	49
3.7	<i>APF Implementation: PWM VSI in CASCADE</i>	50
3.7.1	<i>APF Control System</i>	52
3.7.1.1	<i>Current Reference Generator</i>	52
3.7.1.2	<i>DC Voltage Control Unit</i>	53
3.8	<i>APF Controller: Modified Instantaneous Reactive Power Control</i>	56
3.8.1	<i>Control Algorithm</i>	57
4	Modeling and Analysis of Active Power Filters	59-76
4.1	<i>DC Model of a Series Active Filter</i>	59
4.1.1	<i>Dynamic Models for Power Electronic Systems</i>	60
4.1.2	<i>System Configuration</i>	60
4.1.3	<i>Stability Analysis</i>	62
4.2	<i>APF Analysis using Quad Series VS-PWM Converter</i>	63
4.2.1	<i>System Configuration</i>	65
4.2.2	<i>Design of Active Power Filter</i>	67
4.3	<i>Passive EMI Filter</i>	67
4.4	<i>Design Optimization of a Resonant Turn-off Snubber</i>	69
4.5	<i>Controlling Reactive Power Compensation in APF</i>	70
4.5.1	<i>Principle Of The Adaptive Algorithm</i>	71
4.6	<i>Advanced Control Strategie</i>	75
4.6.1	<i>Sliding Fast Fourier Transformation (SFFT)</i>	75
4.6.2	<i>p-q-n Method</i>	76
4.6.3	<i>d-q Control</i>	76

Table of Contents

5 Design of Power Circuit: Shunt Active Power Filter	77-89
5.1 Hysteris Current Controller	79
5.2 Isolation And Drier Circuit	80
5.3 Power Circuit	81
5.3.1 Design Of Inductor	82
5.3.2 Design Of The Capacitor	82
5.4 Instantaneous active-reactive power theory	83
5.4.1 Neglecting Zero Sequence Components	83
5.4.2 With Zero Sequence Components	85
5.5 Control Strategy	87
5.6 Power Circuit Implementation	87
6 Simulation of Control Circuit for Active Power Filters	91-104
6.1 Simulation Tools	92
6.1.1 MATLAB	92
6.1.2 SIMULINK	93
6.1.3 Running a SIMULINK model	97
6.2 Controller Simulation	98
6.3 Simulation Waveforms	101
7 Analog Controller card for Shunt Active Power Filters	105-110
7.1 Transformation of Signals into Orthogonal Coordinates	105
7.2 Instantaneous Real And Imaginary Power Calculations	106
7.3 Orthogonal Compensation Currents	106
7.4 Transformation of Orthogonal Currents in Three Phase Coordinates	107
7.5 Compensating Current Generation	109
7.6 Experimental results	109
8 Development of APF Controller Software for DSP Implementation	111-153
8.1 Hardware Tools	112
8.1.1 TMS 320C671X DSK	112

Table of Contents

iv

8.1.2	<i>Daughter Cards</i>	113
8.1.2.1	<i>Expansion Memory Interface</i>	114
8.1.2.2	<i>Expansion Peripheral Interface</i>	114
8.1.2.3	<i>Cross platform Specifications</i>	116
8.1.2.4	<i>Layout Daughter boards</i>	120
8.1.3	<i>ADS 8364 EVM</i>	121
8.1.4	<i>TLV 2553 EVM</i>	122
8.1.5	<i>TLV 5614 EVM</i>	123
8.1.6	<i>5 – 6 K INTERFACE EVM</i>	125
8.2	<i>Software Development Tools</i>	125
8.2.1	<i>Real-Time Workshop®</i>	125
8.2.2	<i>S-function</i>	128
8.2.2.1	<i>M-Files S-Functions</i>	129
8.2.2.2	<i>Flag Arguments</i>	129
8.2.2.3	<i>S-Function Block Characteristics</i>	129
8.2.3	<i>Code Composer Studio</i>	130
8.2.4	<i>MATLAB Link for Code Composer Studio</i>	134
8.2.5	<i>SIMULINK Blocks: Embedded Targets</i>	136
8.2.6	<i>Data Converter Plug-In: DCP</i>	137
8.2.6.1	<i>Create A NewProject In CCS</i>	138
8.2.6.2	<i>Open DCP</i>	139
8.2.6.3	<i>Add A Converter</i>	139
8.2.6.4	<i>DSP Configuration</i>	140
8.2.6.5	<i>Converter Settings</i>	141
8.2.6.6	<i>Code Generation</i>	142
8.3	<i>APF Controller Software</i>	143
8.3.1.	<i>Code Generation Using Real Time Workshop & CCS</i>	143
8.3.2.	<i>Code Generation: Using CCS</i>	145
8.3.3	<i>Code Generation Using CCS Link</i>	147
8.4	<i>I/O Port Design</i>	149

Table of Contents

v

8.5.	<i>Hardware Setup</i>	150
8.5.1	<i>High Resolution Setup (using 11 input ADC)</i>	150
8.5.2	<i>Low Resolution Setup (using 6 input ADC)</i>	151
8.6	<i>APF Controller Software</i>	151
9	Concluding Remarks and Future Plans	154-156
9.1	<i>Goals Reached</i>	154
9.2	<i>Innovations</i>	155
9.3	<i>Future Plans for Extension</i>	155
9.4	<i>Industry, Involvement and Interaction</i>	156
10	Bibliography	157-171
	Appendix A: Photogallery	172-179
	A-I APF: Hardware Support Tools	172
	A-II APF: Hardware Components/Modules	177
	A-III Panel for Active Power Filter	178
	A-IV Software Modules	179
	Appendix B: Test Results	180-181
	Appendix C: Papers Published	182-203
1.	<i>"Single Phase PWM Rectifier for Power Factor Correction"</i>	185 - 192
2.	<i>"Higher reliability & Energy Saving by Addressing Requirements of IGBT Gate Driver and Coordination with Power Converter Protection."</i>	193-203
	Appendix D: Experimental Waveforms	204-211
	Appendix E: Bills of Material	212
