Synopsis	iv
Acknowledgements	xii
1 Introduction	1
1.1 General	1
1.2 State of Art	3
1.3 Limitations of Existing Works	55
1.4 Motivation	58
1.5 Thesis Structure	60
2 Voltage Stability With Wind Power	62
2.1 Introduction	62
2.2 Voltage Stability Analysis	63
2.2.1 Methods of Voltage Stability Analysis	66
2.3 Statistical Estimation Methods for Voltage Stability Evaluation	67
2.3.1 Monte Carlo Simulation	68
2.3.2 Point Estimation Method	69
2.3.2.1 Two Point Estimation Method	70
2.3.2.2 Two Point Plus One Sampling ($2n + 1$) Method	74
2.3.2.3 Three Point ($3n$) Method	74
2.3.2.4 Four Point Plus One Method ($4n + 1$)	75
2.3.3 Latin Hypercube Sampling (LHS)	77
2.3.4 Method of Series Expansion	81
2.3.4.1 Moments and Cummulants	82
2.3.4.2 Relation between Cummulants and Moments	84

2.3.4.3	PDF Approximation in terms of Reference PDF	85
2.3.4.3.1	Exact Solution	87
2.3.4.3.2	First Approximation	88
2.3.4.3.3	Second Approximation	90
2.3.4.4	Gram-Charlier Expansion	90
2.3.4.4.1	Selection of Reference PDF	91
2.3.4.4.2	Selection Weibull Parameter for Reference PDF	92
2.4	Correlated Wind Power Sources	92
2.4.1	Relationship Between Correlation Matrix and Covariance Matrix	95
2.4.1.1	Conversion of Covariance Matrix to Correlation Matrix	96
2.4.1.2	Conversion of Correlation Matrix to Covariance Matrix	96
2.5	Results and Discussion	98
2.5.1	Simple Method of Voltage Stability with Wind Power Plant	98
2.5.1.1	Case-1: Wind Farm Supplying the Load	98
2.5.1.2	Case-2: Wind Farm and Grid Supplying the Load	103
2.5.2	Voltage Estimation with Wind Power Using Statistical Methods	106
2.5.2.1	Analysis of Voltage Variation Estimation of IEEE-12 Bus Radial Network with Wind Power using Statistical Esti- mation Methods	107
2.5.2.1.1	Voltage Variation Estimation with Wind Power at Bus-12	108
2.5.2.1.2	Voltage Variation Estimation with Wind Power at Bus-6	117
2.5.2.1.3	Voltage Variation Estimation with Wind Power at Bus-2	127
2.5.2.2	Voltage Estimation of IEEE - 12 Bus Radial System with Multiple Parameters Variation	139
2.5.2.3	Voltage Estimation of IEEE - 12 Bus Radial System with Correlated Wind Power Sources at Different Locations	150
2.5.3	Probability Function Estimation	151
2.6	Conclusion	160

3	Harmonic Stability with Wind Power	162
3.1	Introduction	162
3.2	Harmonics Resonance	164
3.3	Modal Analysis	166
3.3.0.1	Sensitivity of Eigenvalue	173
3.3.1	Relation between Critical Mode and Resonance Frequency	175
3.3.2	Determination of Critical Mode	175
3.3.2.1	Network Aggregation	180
3.4	Selection of Method for Harmonic Resonance Analysis	182
3.5	Optimization using Simulated Annealing	183
3.5.1	Basic of Simulated Annealing	183
3.5.2	Simulated Annealing Process	185
3.5.3	Cooling Schedule	187
3.5.3.1	Multiplicative Monotonic Cooling	188
3.5.3.1.1	Exponential Monotonic Multiplicative Cooling	188
3.5.3.1.2	Logarithmical multiplicative cooling	188
3.5.3.1.3	Linear multiplicative cooling	189
3.5.3.1.4	Quadratic multiplicative cooling	189
3.5.3.2	Additive Monotonic Cooling	190
3.5.3.2.1	Linear Additive Monotonic cooling	190
3.5.3.2.2	Quadratic Additive Monotonic cooling	191
3.5.3.2.3	Exponential Additive Monotonic cooling	191
3.5.3.2.4	Trigonometric Additive Monotonic cooling	191
3.5.3.3	Non-Monotonic Adaptive Cooling	192
3.5.3.4	Selection of Appropriate Cooling Schedule	193
3.5.3.5	Objective Function Formulation	194
3.6	Description of Test Network	195
3.7	Results and Discussion	198
3.7.1	Modal Analysis of Wind Farm Connected to Power System	198
3.7.2	Detune Reactor on PF Capacitor	206
3.7.3	Modal Analysis with Detuned Reactor and C-Type Filter on Bus-5	215
3.7.4	Modal Analysis with Detuned Reactor and High Frequency Filter on Bus-5	221

3.7.5	Optimization of Harmonic Filter	228
3.7.5.1	Effect of Optimized First Order Filter on Network Impedance	236
3.7.5.2	Compliance to IEEE 519 - 1992/2014 Standard	244
3.8	Conclusion	247
4	Converter Stability Analysis	249
4.1	Introduction	249
4.2	Modelling Of Voltage Source Converter	250
4.3	Impedance Based Stability Analysis	251
4.4	Grid Connected Inverter	253
4.5	Phase Lock Loop (PLL)	255
4.6	Damped Passive Filter Topologies	258
4.6.1	R-L Filter	258
4.6.2	L-C Filter	261
4.6.3	L-C-L Filter	263
4.7	L-C-L Filter Design	265
4.8	Results and Discussion	266
4.8.1	Passive Damping of Filter	266
4.8.1.1	Type-I Filter	266
4.8.1.2	Type-II Filter	268
4.8.1.3	Type-III Filter	270
4.8.1.4	Type-IV Filter	272
4.8.1.5	Type-V Filter	274
4.8.2	Active Damping of Filter	275
4.8.3	System Parameter for Converter Analysis	278
4.9	Conclusion	278
5	Harmonic Stability of Grid Connected Wind Energy Source - A Case Study	280
5.1	Introduction	280
5.2	Network Description	281
5.3	Problem Description	282
5.4	Methodology	283

5.5	State Space Analysis	284
5.6	Simulation of Harmonic Resonance of Network	290
5.7	Harmonic Filter Design	293
5.7.1	Tuned Filter	293
5.7.2	C-Type Filter	296
5.8	Results and Discussion	302
5.9	Conclusion	304
6	Small Signal Stability of Doubly Fed Induction Generator	306
6.1	Introduction	306
6.2	Modelling of DFIG	308
6.2.1	DFIG Equations in a-b-c Form	308
6.2.2	$a - b - c$ to $q - d - 0$ Transformation	311
6.2.2.1	Transformation Matrix	311
6.2.2.2	DFIG Equations in $d - q - 0$ Frame	312
6.2.3	State Space Equation Formation	313
6.2.4	Electromagnetic Torque	315
6.2.5	Drive Train Model	317
6.2.5.1	Two Mass Model	317
6.2.5.2	One Mass Model	319
6.2.6	Converter Model	319
6.2.7	Interface of DFIG with Grid	325
6.2.7.1	$d - q$ to $D - Q$ Transformation	325
6.2.7.2	Power Flow between DFIG and Grid	326
6.2.7.3	DFIG Internal Power Flow	327
6.2.8	System Initialization	330
6.3	Eigenvalue Analysis	333
6.4	Probabilistic Small Signal Stability Analysis	334
6.5	System Parameters	336
6.6	Results and Discussions	336
6.7	Conclusion	338

7	Simulation of DFIG with Decoupled Control for Improved LVRT Response	339
7.1	Introduction	339
7.2	LVRT Requirements in india	340
7.3	Wind Power Model	342
7.4	Wind Turbine Model	342
7.5	Wind Turbine Inertial Response	343
7.6	Pitch Angle Control	345
7.7	Decoupled Control Structure	347
7.8	Control Scheme	348
7.9	Test System	354
7.9.1	Test Parameters	355
7.10	Simulation Results and Discussion	355
7.10.1	Case-A: L-L-G Fault of 250 <i>ms</i> Duration	355
7.10.2	Case-B: L-L-G Fault of 1.5 <i>Seconds</i> Duration	366
7.11	Conclusion	377
8	Conclusion and Future Work	379
8.1	Conclusion	379
8.2	Future Work	381
