

LIST OF FIGURES

Figure 1.1 Classification of distortion in power networks.....	3
Figure 1.2 Shunt passive filters (a) single tuned filter (b) first order high-pass filter (c) second order high-pass filter (d) C-type filter	8
Figure 1.3 APF converter classification (a) current source converter type (b) voltage source converter type	12
Figure 1.4 Series active power filter.....	13
Figure 1.5 Unified power quality conditioner	14
Figure 1.6 Combination of series active filter and shunt passive filter	15
Figure 1.7 Series APF connected in series with the shunt passive filter	16
Figure 1.8 Transformer less shunt hybrid power filter	16
Figure 2.1 Current harmonic spectrums (Laser machine)	22
Figure 2.2 Voltage and current waveform (Laser machine).....	23
Figure 2.3 Current harmonic spectrums (Embroidery machine).....	23
Figure 2.4 Voltage and current waveform (Embroidery machine).....	23
Figure 2.5 Current harmonic spectrums (Water jet).....	24
Figure 2.6 Voltage and current waveform (Water jet)	24
Figure 2.7 Current harmonic spectrums (EAF)	24
Figure 2.8 Current harmonic spectrums (EAF)	25
Figure 2.9 Current harmonic spectrums (UPS)	25
Figure 2.10 Voltage and current waveform (UPS).....	25
Figure 2.11 Current harmonic spectrums (Computer center).....	26
Figure 2.12 Voltage and current waveform (Computer center)	26
Figure 2.13 Current harmonic spectrums (fan regulator)	26
Figure 2.14 Voltage and current waveform (fan regulator).....	27
Figure 2.15 Current harmonic spectrums (PC).....	27
Figure 2.16 Voltage and current waveform (PC)	27
Figure 2.17 Current harmonic spectrums (Printer).....	28
Figure 2.18 Voltage and current waveform (Printer)	28
Figure 2.19 Current harmonic spectrums (LCD projector)	28
Figure 2.20 Voltage and current waveform (LCD projector).....	29
Figure 2.21 Current harmonic spectrums (CRO)	29

Figure 2.22 Voltage and current waveform (CRO)	29
Figure 2.23 Current harmonic spectrums (DT)	30
Figure 2.24 Voltage harmonic spectrums (DT).....	30
Figure 2.25 Voltage and current waveform (a-phase).....	30
Figure 2.26 Voltage and current waveform (b-phase).....	31
Figure 2.27 Voltage and current waveform (c-phase).....	31
Figure 2.28 Voltage and current waveform (a-b-c and neutral)	31
Figure 2.29 Typical electric arc furnaces (EAF)	33
Figure 2.30 Heat conversions by electric arc	33
Figure 2.31 EAF with an electric network	41
Figure 2.32 Complete Simulink/MATLAB Simulation file of the proposed EAF model (a) three phase network along with EAF (b) single phase EAF simulation (c) EAF equation modeling	42
Figure 2.33 Waveform of arc voltage-current v/s time of (a) Cassie-Mayr's EAF model (b) Proposed EAF model during refining cycle	44
Figure 2.34 VIC of (a) Cassie-Mayr's EAF model (b) the proposed EAF model during refining cycle	45
Figure 2.35 Harmonic spectrum of arc current at PCC of (a) Cassie-Mayr's EAF model (b) the proposed EAF during refining cycle.....	46
Figure 2.36 Harmonic spectrum of arc voltage at PCC of (a) Cassie-Mayr's EAF model (b) proposed EAF model during refining cycle	48
Figure 2.37 P-Q consumption of (a) Cassie-Mayr's EAF model (b) Proposed EAF model during refining cycle	50
Figure 2.38 Simulink/MATLAB Simulation of sinusoidal flicker.....	53
Figure 2.39 Comparisons of data from various sources on voltage flicker	54
Figure 2.40 Waveform of arc voltage-current v/s time of (a) Cassie-Mayr's EAF model (b) proposed EAF model during melting cycle considering sinusoidal flicker.....	55
Figure 2.41 VIC of (a) Cassie-Mayr's EAF model (b) the proposed EAF model during melting cycle considering sinusoidal flicker	56
Figure 2.42 P-Q consumption of (a) Cassie-Mayr's EAF model (b) proposed EAF model during melting cycle considering sinusoidal flicker	57
Figure 2.43 Simulink/MATLAB Simulation of random flicker.....	58
Figure 2.44 Waveform of arc voltage-current v/s time of (a) Cassie-Mayr's EAF model (b) Proposed EAF model during melting cycle considering random flicker.....	59

Figure 2.45 VIC of (a) Cassie-Mayr's EAF model (b) the proposed EAF model during melting cycle considering random flicker	60
Figure 2.46 Single line diagram of test system	61
Figure 2.47 RM loop auxiliaries (a) equivalent 6-pulse DC motor drive (b) three-phase 6-pulse converter	62
Figure 2.48 Complete Simulink/MATLAB simulation file of EAF Model 1 (Cassie-Mayer) (a) three phase network along with EAF (b) three phase EAF simulation (c) single phase EAF simulation (d) EAF equation simulation	66
Figure 2.49 Complete Simulink/MATLAB simulation files of proposed EAF model (a) three phase network along with EAF (b) three phase EAF simulation (c) single phase EAF simulation	68
Figure 2.50 Simulink/MATLAB Simulation of (a) sinusoidal flicker (b) random flicker	68
Figure 2.51 Simulink/MATLAB Simulation of (a) 6-pulse DC motor drive (b) three-phase 6-pulse converter	69
Figure 3.1 Schematic diagram of shunt passive filter connected to EAF distribution network	72
Figure 3.2 Equivalent circuit diagram of tuned shunt passive filter	73
Figure 3.3 Shunt connected low pass filter	75
Figure 3.4 Shunt connected high pass filter	76
Figure 4.1 PQ improvement using CF	80
Figure 4.2 Voltage vector decomposition	86
Figure 4.3 Reference signal calculator	90
Figure 4.4 Direct-sequence component calculation	91
Figure 4.5 Fundamental positive sequence component calculator	91
Figure 4.6 Fortescue inverse transformation	92
Figure 4.7 IGBT leg for phase-a	93
Figure 4.8 Series APF connected at PCC	94
Figure 4.9 Gating signal generation	94
Figure 4.10 Control strategy simulations	95
Figure 4.11 Composite filter configuration	96
Figure 4.12 Single phase equivalent circuit EAF supplying network (a) with fundamental and harmonic components (b) with only harmonic components	100
Figure 4.13 Closed loop model for composite filter (a) complete model (b) reduced model	101
Figure 4.14 Magnitude and phase Bode plot for (a) function $k_s(s)$ (b) for function $k'_s(s)$	106
Figure 5.1 Complete MATLAB simulation file of composite filter connected to EAF network	108

Figure 5.2 Filter performance in EAF refining cycle (a) V_{PCC} without filter (b) harmonic spectrum without filter (c) V_{PCC} with PF (d) harmonic spectrum with PF (e) V_{PCC} with CF (f) harmonic spectrum with CF.....	110
Figure 5.3 Filter performance in EAF refining cycle (a) I_{PCC} without filter (b) harmonic spectrum without filter (c) I_{PCC} with PF (d) harmonic spectrum with PF (e) I_{PCC} with CF (f) harmonic spectrum with CF.....	113
Figure 5.4 Filter performance in EAF refining cycle (a) VIC without filter (b) PQS powers without filter (c) power factor without filter (d) VIC with PF (e) PQS powers with PF (f) power factor with PF (g) VIC with CF (h) PQS powers with CF (i) power factor with CF.....	117
Figure 5.5 Filter performance in EAF melting cycle (sinusoidal flicker) (a) V_{PCC} without filter (b) harmonic spectrum without filter (c) V_{PCC} with PF (d) harmonic spectrum with PF (e) V_{PCC} with CF (f) harmonic spectrum with CF.....	120
Figure 5.6 Filter performance in EAF melting cycle considering random flicker (a) I_{PCC} without filter (b) harmonic spectrum without filter (c) I_{PCC} with PF (d) harmonic spectrum with PF (e) I_{PCC} with CF (f) harmonic spectrum with CF.....	122
Figure 5.7 Filter performance in EAF melting cycle considering sinusoidal flicker (a) VIC without filter (b) PQS powers without filter (c) power factor without filter (d) VIC with PF (e) PQS powers with PF (f) power factor with PF (g) VIC with CF (h) PQS powers with CF (i) power factor with CF	127
Figure 5.8 Filter performance in EAF melting cycle (random flicker) (a) V_{PCC} without filter (b) harmonic spectrum without filter (c) V_{PCC} with PF (d) harmonic spectrum with PF (e) V_{PCC} with CF (f) harmonic spectrum with CF.....	129
Figure 5.9 Filter performance in EAF melting cycle considering random flicker (a) I_{PCC} without filter (b) harmonic spectrum without filter (c) I_{PCC} with PF (d) harmonic spectrum with PF (e) I_{PCC} with CF (f) harmonic spectrum with CF.....	131
Figure 5.10 Filter performance in EAF melting cycle considering random flicker (a) VIC without filter (b) PQS powers without filter (c) power factor without filter (d) VIC with PF (e) PQS powers with PF (f) power factor with PF (g) VIC with CF (h) PQS powers with CF (i) power factor with CF	136
Figure 5.11 Three phase V_{PCC} for refining cycle (a) without filter (b) with PF (c) with CF	138
Figure 5.12 Three phase V_{PCC} for sinusoidal flicker (a) without filter (b) with PF (c) with CF	139
Figure 5.13 Three phase V_{PCC} for random flicker (a) without filter (b) with PF (c) with CF	141
Figure 5.14 Three phase voltage unbalance (a) without filter (b) with PF (c) with CF	142
