

LIST OF FIGURES

Figure	Title	Page
2.1	Thermogravimetric curves; TGA and DTG of carbonization of coal and coal/iron oxide mixtures	18
2.2	Block diagram of various steelmaking process routes	30
2.3	Single-stage smelting reduction process	39
2.4	Two-stage smelting reduction process	39
2.5	Single-stage smelting reduction process	41
2.6	Two-stage smelting reduction process	42
2.7	Three-stage smelting reduction process	42
2.8	Corex C3000 process	43
2.9	Romelt process	46
2.10	(a) DIOS process and (b) SRF (DIOS)	48
2.11	HIs melt process	49
2.12	AusIron process	51
2.13	AISI process	53
2.14	IDI process	54
2.15	(a) STAR process and (b) XR process	55
2.16	ITmk3 process	58
3.1	Block diagram for melting in an induction furnace	90
4.1	SEM photomicrographs of powder samples at 500X (a) iron ore, (b) coal from Jharia mines, (c) coal from Bhilai Steel Plant, and (d) lime	112
4.2	Flow diagram for composite pellet making	114
4.3	SEM photomicrographs of fractured surface of oven dried iron ore-coal composite pellets	115
4.4	Porosity of iron ore-coal composite pellets	119
4.5	Compressive strength vs temperature plot for pellets	124
4.6	Drop strength vs temperature plot for pellets	124
4.7	Shatter index vs Fe/C ratio plot for pellets	124
4.8	Strength vs porosity plot for ACP pellets	125
4.9	Strength vs porosity plot for BCP pellets	125
4.10	Flow rate of argon gas	125
4.1P	Photo: Smelting reduction set-up (induction furnace with power control panel)	131
5.1	TG-DTA of coal (source: Jharia mines, Dhanbad)	138
5.2	TG-DTA of coal (source: Bhilai Steel Plant, Bhilai)	138
5.3	Simultaneous thermal analysis of ACP-1 composite pellet	142
5.4	Simultaneous thermal analysis of BCP-1 composite pellet	142
5.5	Fraction of reduction vs time plot for ACP1 pellet and BCP1 pellet	148
5.6	Effect of Fe_{tot}/C_{fix} ratio on degree of reduction of composite pellets	149
5.7	Effect of porosity on degree of reduction of ACP and BCP pellets	149
5.8	Rate of reduction vs temperature plot for ACP1 and BCP1 pellets	153

5.9	Arrhenius plot for non-isothermal reduction of composite pellets	154
6.1	Reduction curve for ACP and BCP pellets in liquid metal bath.	160
6.2	Rate of reduction for ACP and BCP pellets in liquid metal bath.	162
6.3	Comparison of reduction curves (a) fraction of reduction and (b) rate of reduction.	162
6.4	Iron yield vs Fe/C ratio	164
6.5	Slag weight (experimental) vs Fe/C ratio	164
6.6	Change in carbon vs Fe/C ratio	166
6.7	Change in tramp elements vs Fe/C ratio	166
6.8	X-ray diffraction spectra of reduced pellet	167
6.1P	Photo: SEM of reduced pellet ACP2-10 sec (outer surface), 250X	169
6.2P	Photo: SEM of reduced pellet ACP2-10 sec, 1000X	169
6.3P	Photo: SEM of reduced pellet ACP2-10 sec, 500X	169
6.4P	Photo: SEM of reduced pellet BCP2-10 sec, 500X	169
6.5P	Photo: SEM of reduced pellet ACP2-20 sec, 1000X	169
6.6P	Photo: SEM of reduced pellet BCP2-20 sec, 1000X	169
6.7P	Photo: SEM of reduced pellet ACP2-30 sec, 500X	169
6.8P	Photo: SEM of reduced pellet BCP2-30 sec, 1000X	169
6.9P	Photo: SEM of reduced pellet ACP2-40 sec, 1000X	170
6.10P	Photo: SEM of reduced pellet BCP1-40 sec, 1000X	170
