

List of Figures

2.1	Sound wave displacement with time	10
2.2	Sound interaction with receiving surface	16
2.3	Sound absorption	16
2.4	Sound transmission	20
2.5	Sound reflection	21
2.6	Sound refraction	21
2.7	Sound diffraction	22
2.8	Sound absorption in a porous material	31
2.9	Porous absorbing materials	32
2.10	Representative construction	35
2.11	Measurements of acoustics absorption with usage of different materials . .	35
2.12	Nanospider Acoustic Web TM	36
2.13	Alpha coefficient	36
2.14	Nanofibrous layer is applied by the electro spinning	37
2.15	NAC of nanofibrous layers of different areal densities	37
2.16	Scanning electron microscope image and schematic representation of porous absorber	41
2.17	Different cross sectional shapes of fibres	43
2.18	Schematic diagram of the impedance tube	56
2.19	Kapok tree	58
2.20	Kapok seedpods	58
2.21	SEM of Kapok fibre	59
2.22	Diagram of the lateral cell wall structure of kapok fibre	61
2.23	Transmission electron microscope (TEM) image of kapok fibre	62
2.24	Absorbency of kapok fibre	65

2.25	Estabragh / Milkweed Fibre	73
2.26	SEM of Milkweed fibre	74
2.27	A three-dimensional response surface	83
2.28	A Contour plot of the three-dimensional response surface	83
3.1	SEM of kapok fibre. (i) Kapok fibre cross-section (ii) Kapok fibre surface .	86
3.2	SEM of milkweed fibre (i) Milkweed fibre cross-section (ii) Milkweed fibre surface	87
3.3	Different stages of kapok fibre	87
3.4	Open pod of milkweed fibre	88
3.5	Different stages of milkweed fibre collection	88
3.6	Modal fibre carded web	94
3.7	Miniature carding machine	95
3.9	Image of sandwich web passed through a miniature carding machine	95
3.8	Sandwich web preparation	96
3.10	Image of web feeding in needle punch machine	97
3.11	Image of machine setting display screen	97
3.12	Image of produced nonwoven fabric	97
3.13	Air permeability tester	99
4.1	Schematic diagram of the impedance tube	102
4.2	Schematic diagram of the experimental setup of impedance	102
4.3	Image of experimental setup of impedance tube	103
4.4	Validation Test Samples (K28-Kapok fiber nonwoven fabric, M28-Milkweed fiber nonwoven fabric)	106
5.1	Effect of kapok fibre blend% and carded web mass on sound absorption coefficient	110
5.2	Effect of kapok fibre blend% and stroke frequency on sound absorption coefficient	111
5.3	Effect of kapok fibre blend% and needle depth on sound absorption coefficient	113
5.4	Effect of carded web mass and stroke frequency on the sound absorption coefficient	114

5.5	Effect of carded web mass and needle depth on the sound absorption coefficient	116
5.6	Effect of stroke frequency and needle depth on the sound absorption coefficient	118
5.7	Pareto chart for process parameters of kapok fibre nonwoven fabric	122
5.8	Normal plot for process parameters of kapok fibre nonwoven fabric	122
5.9	Optimization plot of kapok fibre nonwoven fabric	126
5.10	Effect of kapok fibre proportion in blend on sound absorption coefficient . .	128
5.11	Effect of carded web mass on sound absorption coefficient	130
5.12	Effect of stroke frequency on sound absorption coefficient	132
5.13	Effect of needle depth on sound absorption coefficient	134
5.14	Effect of kapok fibre fabric thickness on sound absorption coefficient	136
5.15	Effect of kapok fibre fabric GSM on sound absorption coefficient	137
5.16	Effect of kapok fibre fabric air permeability on sound absorption coefficient	139
5.17	Effect of kapok fabric porosity on sound absorption coefficient	141
5.18	Pareto chart for physical properties of kapok fibre nonwoven fabric	147
5.19	Normal plot for physical properties of kapok fibre nonwoven fabric	147
5.20	Effect of milkweed fibre blend% and carded web mass on sound absorption coefficient	149
5.21	Effect of milkweed fibre blend% and stroke frequency on sound absorption coefficient	150
5.22	Effect of milkweed fibre blend% and needle depth on sound absorption coefficient	152
5.23	Effect of carded web mass and stroke frequency on sound absorption coefficient	153
5.24	Effect of carded web mass and needle depth on sound absorption coefficient	155
5.25	Effect of stroke frequency and needle depth on sound absorption coefficient	157
5.26	Pareto chart for process parameters of milkweed fibre nonwoven fabric . . .	161
5.27	Normal plot for process parameters of milkweed fibre nonwoven fabric . . .	162
5.28	Optimization plot of Milkweed fibre nonwoven fabric	166
5.29	Effect of milkweed fibre proportion in blend on sound absorption coefficient	168
5.30	Effect of milkweed fibre carded web mass on sound absorption coefficient .	170
5.31	Effect of stroke frequency on sound absorption coefficient	172
5.32	Effect of needle depth on sound absorption coefficient	174

5.33	Effect of milkweed fibre fabric thickness on sound absorption coefficient . .	176
5.34	Effect of milkweed fabric GSM on sound absorption coefficient	178
5.35	Effect of milkweed fabric air permeability on sound absorption coefficient .	179
5.36	Effect of milkweed fabric porosity on sound absorption coefficient	181
5.37	Pareto chart for physical properties of milkweed fibre nonwoven fabric . . .	188
5.38	Normal plot for physical properties of milkweed fibre nonwoven fabric . . .	188
5.39	Sound absorption coefficient (α) of commercial Vs. developed tube - kapok sample	190
5.40	Correlation of commercial Vs. developed tube – kapok sample	190
5.41	Sound absorption coefficient (α) of commercial Vs. developed tube - milk- weed sample	192
5.42	Correlation of commercial Vs. developed tube – milkweed sample	192
