

Table of Contents

Chapter no.	Title	Page no.
	Abstract	vi
	List of tables	xi
	List of figures	xiv
1	Introduction	1
	1.1 Industry defined problem (IDP)	2
	1.1.1. Electrostatic discharge (ESD)	2
	1.1.2. Electromagnetic field/radiation	3
	1.1.3. Contamination	3
	1.2 Solution of IDP – Development of high functional textile fabrics	3
	1.2.1. Research gap	4
	1.2.2. Objectives	4
	1.2.3. Work plan	5
2	Literature review	6
	2.1 Electrostatic discharge (ESD)	7
	2.1.1. Static electricity	7
	2.1.2. How objects become charged?	7
	2.1.3. What is ESD?	8
	2.1.4. Causes & hazards of ESD	9
	2.1.5. ESD control	10
	2.1.6. Material classification	12
	2.1.7. Surface resistivity	12
	2.2 Electric and magnetic field (EMF)	13
	2.2.1. Basics of EMF	13
	2.2.2. Characteristics of EMF	14
	2.2.3. Sources of EMF	18
	2.2.4. EMF protection	20
	2.2.5. Field strength	20

	2.3 Cleanroom contamination	20
	2.3.1. Basics of contamination	21
	2.3.2. Nature of contamination	22
	2.3.3. Different contaminants	22
	2.3.4. The human component	23
	2.3.5. Modern cleanroom concepts	24
	2.3.6. Cleanroom standards	25
	2.3.7. Contamination control	28
	2.3.8. Cleanroom test parameters	30
	2.3.8.1. Air permeability	30
	2.3.8.2. Fabric particle density transfer rate (F-PDTR)	31
	2.4 High functional conductive textiles	31
	2.4.1. Introduction	31
	2.4.2. Conductive materials	33
	2.4.2.1. The 20 th century guard	33
	2.4.2.2. Conductive/metal threads & inks	34
	2.4.2.3. Nanometals	34
	2.4.2.4. Carbon nanomaterials	34
	2.4.2.5. Inherently conductive polymers (ICPs)	34
	2.4.3. Methods to introduce conductive nature in textiles	35
	2.4.3.1. Fibre stage	35
	2.4.3.2. Yarn stage	36
	2.4.3.3. Fabric stage	36
3	Experimental	39
	3.1 Material and methodology	40
	3.1.1. Yarn samples	40
	3.1.2. Fabric samples	41
	3.2 Yarn testing	45
	3.3 Fabric testing	46
	3.3.1. Surface resistivity	46
	3.3.2. Field strength - Development of set up & testing	46

	3.3.3. Air permeability	47
	3.3.4. Fabric particle density transfer rate (F-PDTR) - Development of set up & testing	48
4	Results & Discussions	52
	4.1 Surface resistivity	54
	4.1.1. Effect of material	54
	4.1.2. Effect of fineness	56
	4.1.3. Effect of weft space	59
	4.1.4. Effect of water repellent treatment	63
	4.1.5. Effect of conductive pattern	64
	4.2 Field strength	65
	4.2.1. Effect of material	65
	4.2.2. Effect of fineness	66
	4.2.3. Effect of weft space	69
	4.2.4. Effect of water repellent treatment	73
	4.2.5. Effect of conductive pattern	74
	4.3 Air permeability	75
	4.3.1. Effect of material	75
	4.3.2. Effect of ends/inch and picks/inch	75
	4.3.3. Effect of fineness	77
	4.3.4. Effect of weft space	78
	4.3.5. Effect of water repellent treatment	81
	4.3.6. Effect of conductive pattern	81
	4.4 Fabric particle density transfer rate (F-PDTR)	83
	4.4.1. Effect of material	83
	4.4.2. Effect of ends/inch and picks/inch	84
	4.4.3. Effect of fineness	86
	4.4.4. Effect of weft space	88
	4.4.5. Effect of water repellent treatment	92
	4.4.6. Effect of conductive pattern	93
5	Conclusions	95
	5.1 Introduction	96

	5.2 Major findings of present work	97
	5.3 Future scope of work	100
6	References	102
	Appendices	112
	• Yarn test results	113
	• List of publications	114
