HALL NO - 6 STALL NO - R - 30

Visit Us - 2nd - 7th DECEMBER 2012.

It is a pleasure to inform all our valued customers that we are participating in the 9th India ITME (International Textile Machinery Exhibition) held at Mumbai between 2nd December 2012 to 7th December, 2012. The 9th India International Textile Machinery exhibition is the most important platform for everyone associated with Textile Industry. It will be showcasing textile technology, machinery, accessories and services by 620 exhibitors from more than 42 countries and around 1,00,000 visitors

The screenshot shows a news article titled "Fabric Feel Tester - Designed By IIT with Financial Support from DST - Delhi Mfg - Texlab Industries, Ahmedabad, Gujarat". The article includes a photograph of the machine, its date (16 May 2012), and a testimonial from a client. The website has a navigation bar with links like Home, About Us, Products, Manufacturing, I.I.T., Aagnyam, Contact, and a search bar.

Fabric Feel Tester - Designed By IIT with Financial Support from DST - Delhi Mfg - Texlab Industires, Ahmedabad Gujarat

19 May,2012

We introduce ourselves as one of the leading manufacturers of Textile, Dyes & Chemical Laboratory Testing Instruments, based at Ahmedabad, and are glad to inform you that we have been granted License to manufacture and Market Fabric Feel Tester – Highly sophisticated Machine developed by Indian Institute of Technology(IIT), New Delhi.

Fabric feel is a generic term for the tactile sensations associated with fabrics, and it markedly influences consumer preferences of textile products. Although fabric handle is still being judged subjectively to a large extend, the need for objective methods to measure the fabric handle has always existed. At present there are few instruments available for evaluating fabric handle objectively, like Kawabata evaluation system for fabrics. The main disadvantages of this instrument are high cost, complexity and the time consuming procedure. It is proposed to develop a comprehensive system which would give a feel value as well as other mechanical specifications of a fabric in a single test. The proposed instrument will be very helpful to the industries who are dealing with the production, evaluation and applications of textile fabrics for process control, quality control and quick decision making. These industries are mainly weaving industries, processing industries, garment manufacturer, buying houses, test houses etc. It will be also very useful for the academic and research institutes for research and development of new types of fabrics.

Purpose of Instrument

- To measure fabrics softness, feel directly
- To select the optimum fabric finish treatment by comparing feel
- To develop newer fabric with better feel.

Users

- In dyeing & finishing industries
- In weaving industries
- In garment manufacturing industries
- In testing laboratories
- In academic and research institutes.

Salient Features

- Quick evaluation Low cost
- Real time continuous graph
- Different nozzle diameter for different types of fabric
- Fixed operating speed
- Separate load cell for axial and radial force measurement
- Automatic stop motion

The latest development of the instrument draws lot of media attention too. Some of the coverage by prominent media like www.fibre2fashion.com, www.99business.com, www.ebscohost.com, www.facebook.com(blog page whatnext-benext.blogspot.in) given spontaneous coverage of the development as given in the following pages.

Subjective Assessment of Fabric: 10 point scale is used for the assessment. Point 10 indicates the best feel of the fabric and 1 indicates the worst. In order to evaluate the fabric hand values subjectively, pallets of fabric samples were prepared. In survey each assessor was asked to rank the softness of the fabric sample based on a 10 point scale as given below:

The assessors were reminded to ignore the effect of colour and pattern while ranking the fabrics. In the survey total 170 assessors were included at random. Heterogeneity of the group were taken care of in terms of age, sex, profession, etc.. The definition and criteria of the softness rating were explained to the assessors. The fabric samples were presented to individual assessor for feeling, rubbing, bending, squeezing by their hand and record their response.

Fabric samples procured from market:

Assessors: Male, Age Group: 15-30 yrs

In order to determine the consistency of subjective assessment of the assessors, rank co relation method is used to determine the level of agreement between assessors.

Average rank values for all subjective assessors of fabric sample procured from market:

Groups	SS1	SS2	SS8	SS10	SS13	SS14	SS23	SS24	SS28	SS29
Male, Age Group: 15-30 yrs	7.65	7.35	6.1	5.6	6.05	4.9	2.6	2.9	7.3	7.7
