

Table of Contents

Chapters	Title	Page No.
Chapter 1	General Introduction	1-55
1.0	Energy scenario in India	3
1.1	Renewable sources of energy	3
1.1.1	Advantages of using natural sources of energy	4
1.1.2	Solar Energy	4
1.1.3	Wind Energy	4
1.1.4	Hydro Power	5
1.1.5	Biomass	5
1.1.6	Biofuels	5
1.2	Biodiesel	6
1.2.1	Biodiesel definition	6
1.2.2	Chemistry of Biodiesel Production	6
1.2.3	Advantages of biodiesel	7
1.2.4	Disadvantages of Biodiesel	8
1.3	Putative Plants for bio-diesel	8
1.4	Reason for selecting <i>Jatropha curcas</i> for the present study	9
1.5	About <i>Jatropha</i>	9
1.5.1	Taxonomy, Botany and Ecology	9
1.5.2	Toxicity	11
1.6	Agronomy	12
1.6.1	Plantation	12

1.6.2	Crop establishment and Propagation Methods	13
1.6.3	Spacing of Plants	16
1.6.4	Best agronomic practices to increase seed yield	16
1.7	Uses of <i>Jatropha</i> tree and its products	16
1.8	Potential value of <i>Jatropha curcas</i> seeds	17
1.8.1	<i>Jatropha curcas</i> oil as an energy source	19
1.8.2	Fuel Properties	20
1.8.3	<i>Jatropha</i> oil blend with diesel	20
1.8.4	Lipid and Fatty acid composition of seed oil and triacylglycerols	21
1.9	Existing Genetic Variation	23
1.10	Molecular Marker Techniques	27
1.10.1	Non-PCR based techniques	27
1.10.2	PCR based techniques	28
1.10.2.1	Arbitrary Primed PCR	29
1.10.2.2	Sequence targeted PCR based markers	33
1.11	To bring <i>Jatropha</i> to the forefront	35
1.11.1	Increasing oil content per seed	36
1.11.2	Targeting DGAT	37
1.11.3	Electroporation	37
1.11.4	Microprojectile Bombardment	38
1.11.5	Microinjection	38
1.11.6	<i>Agrobacterium tumefaciens</i> mediated transformation	39
1.12	Natural transformation by <i>Agrobacterium tumefaciens</i>	39
1.12.1	Ti Plasmid	40

1.12.2	The T-DNA transfer process	41
1.13	Use of <i>Agrobacterium</i> in biotechnology	45
1.14	References	47
Chapter 2	Tissue Culture Studies For Development of Regeneration Protocol for <i>Jatropha</i>	56-82
2	Introduction	56
2.1	Literature Studies	57
2.2	Materials and Methods	59
2.2.1	Plant Material and General Culture conditions	59
2.2.2	<i>Jatropha curcas</i> explants	59
2.2.3	Data Analysis	60
2.3	Results and Discussion	60
2.3.1	Standardization of surface sterilization treatment	60
2.3.2	Indirect organogenesis through leaf discs	69
2.3.3	Direct organogenesis in <i>J. curcas</i>	77
2.4	References	80
Chapter 3	Study of Somatic Embryogenesis in <i>Jatropha curcas</i> : Liquid Suspension Culture and Solid Media Studies	83-102
3	Introduction	83
3.1.	Literature Studies	84
3.2	Materials and Method	87
3.2.1	Plant Material	87
3.2.2	Culture Media	87
3.2.3	Optimizing liquid suspension culture system	88
3.2.4	Staining of cells in suspension cultures	88
3.2.5	Cell count	88

3.2.6	Auxin extraction and estimation	88
3.3	Results and Discussion	89
3.3.1	Effect of season on somatic embryogenesis	89
3.3.2	Role of Auxins	91
3.3.3	Liquid suspension culture studies	92
3.3.4	Solid Media Studies	95
3.4	References	99
Chapter 4	Generation of DGAT2 transformants of <i>J. curcas</i>	103-132
4	Introduction	103
4.1	Literature Studies	104
4.2	Materials and Method	108
4.2.1	Cultures and Maintenance	108
4.2.2	Media and Antibiotics	109
4.2.3	Antibiotics Stocks	109
4.2.4	Plasmid extraction by Alkaline Lysis Method	109
4.2.5	Competent Cell Preparation	110
4.2.6	Agarose gel Electrophoresis	112
4.2.7	Triparental Mating	112
4.2.8	Ketolactose Test	114
4.2.9	Vector Map	115
4.3	Co-cultivation	116
4.3.1	Preparation of <i>Agrobacterium</i> suspension for co-cultivation	116
4.4	Explants and Media Composition	117
4.4.1	<i>Agrobacterium</i> mediated transformation of somatic embryos of <i>J. curcas</i>	117

4.4.2	<i>Agrobacterium</i> mediated transformation of leaf discs of <i>J. curcas</i>	117
4.5	Determination of phytotoxic level of selective and bactericidal antibiotics	118
4.6	Evaluation of factors influencing transformation	118
4.7	Results and Discussion	118
4.7.1	Transformation of <i>Agrobacterium</i> with DGAT2 by Triparental Mating	119
4.7.2	Confirmation of <i>Agrobacterium</i> transformants using restriction digestion	120
4.7.3	<i>Agrobacterium</i> infection of leaf explants	121
4.7.4	Evaluation of selective & bactericidal antibiotics on leaf discs & somatic embryos	125
4.8	Optimization of factors influencing transformation	125
4.8.1	Explant Pre-culture period	125
4.8.2	Wounding Effect	126
4.8.3	Effect of acetosyringone	127
4.8.4	Effect of Co-cultivation	128
4.9	References	130
Chapter 5	Study of Genetic Diversity of <i>J. curcas</i> by RAPD	133-166
5	Introduction	133
5.1	Literature Studies	135
5.2	Materials and Method	138
5.2.1	Plant Materials	138
5.2.2	Reagents	138
5.2.3	Chemicals	139
5.2.4	DNA Isolation Protocol	140
5.2.5	Agarose Gel Electrophoresis	140
5.2.6	Spectrophotometric determination of DNA concentration	141

5.2.7	Restriction Digestion	141
5.2.8	DNA Amplification	141
5.3	Results and Discussion	142
5.3.1	Standardization of DNA isolation from <i>J.curcas</i>	142
5.3.2	Optimization of RAPD- PCR parameters	150
5.4	References	163
	Summary & Conclusion	167-171
	Presentation & Award	172
	Publications	173
	Synopsis	-
