1	Introduction	1
1.1	Introduction	1
1.2	Layout of the Thesis	10
2	Preliminaries	12
2.1	Why to Study Discrete Dynamical System?	14
2.2	State Space Description of Discrete-time System	16
2.3	Linearization of Nonlinear Systems	17
2.4	Existence and Uniqueness of Solutions	18
2.4.1	Solutions of Linear Systems	18
2.4.2	Fundamental Matrices	19
2.4.3	Solution of Nonlinear Systems	20
2.5	Discrete Volterra Systems	20
2.6	Stability Analysis	22
2.6.1	Stability of Linear Systems	23
2.6.2	Stability of Nonlinear Systems	24
2.6.3	(sp) Matrices	27
2.6.4	Generalized Subradius	28
2.6.5	Dichotomy	29

2.7	Controllability Analysis	31
2.7.1	Various Notions and Basic Results of Controllability	32
2.7.2	Optimal Control	35
2.8	Some Tools of Analysis	36
3	Steering Control of Semi-linear Discrete Dynamical System	39
3.1	Introduction	40
3.2	Steering Control for Semi-linear System	42
3.3	Well-definedness of the Steering Control	43
3.4	Computational Scheme of the Steering Control	46
3.5	Equivalence between Controllability and Reachability	46
3.6	Numerical Examples	47
3.7	Summary	49
4	Controllability of Discrete Volterra Systems	50
4.1	Introduction	51
4.2	Controllability of Linear Volterra system	54
4.2.1	Controllability using Controllability Grammian	54
4.2.2	Controllability using Kalman type Rank Condition	55
4.2.3	Another Steering Control for Linear Volterra System	56
4.3	Controllability of Semi-linear System	57
4.4	Numerical Examples	59
4.5	Summary	62
5	Stability Analysis of Discrete Systems	63
5.1	Stability using (sp) Matrix	64

5.1.1	Importance of (sp) Matrix	64
5.1.2	Exponential Stability of Null Solution of Semi-linear System .	65
5.1.3	Numerical Examples	67
5.2	Stability using Generalized Subradius	70
5.2.1	Introduction	70
5.2.2	Accurate Estimate of Solution	72
5.2.3	Asymptotic Behavior of Null Solution	73
5.2.4	Numerial Example	74
5.3	Asymptotic Equivalence of Discrete Volterra Systems	76
5.3.1	Introduction	76
5.3.2	Asymptotic Equivalence	78
5.3.3	Numerical Example	81
5.4	Summary	82
6	Optimal Control of Discrete Volterra System - a Classical Approach	83
6.1	Introduction	84
6.2	Solution by the Classical Minimization Method using Lagrange Multipliers	85
6.3	Summary	87
	Summary	88
	Appendix	91
	Publications	123
	Bibliography	123
