

LIST OF TABLES

Table	Page
3.1. Results for the synthesis of bifunctional macroinitiator, BAB1, BAB2 and CBABC Block Copolymers via ATRP	82
4.1. Effect of Monomer Addition at different Time Intervals on Emulsion ATRP of MMA using 2-hydroxyethyl 2-bromoisobutyrate (HEBI) as an Initiator at Room Temperature	107
4.2. SEC Results of Emulsion ATRP of MMA showing an increase in Molecular weight with Time in case of EP5	108
5.1. Conversion, Molecular weight, and Molecular Weight Distribution Data for Homopolymerization of Styrene and 2-vinylpyridine	123
5.2. Molecular Characteristics of Block copolymers of 2-vinylpyridine with styrene	127
6.1. Selected Data for the Synthesis of Diblock Copolymer (DB), Triblock Copolymer (TB), Star-block Copolymer (SB) of Styrene (ST) and Isoprene (IP) Using <i>sec</i> -Butyllithium (<i>s</i> -BuLi) as an Initiator and Malonyl Chloride (MC) as a Coupling Agent	145
