

List of Tables

Table No.	Title	Pg.No.
Table 2.1	Primers used for the study to generate <i>c-UBC1</i> in YEp96.	38
Table 2.2	Primers used for the study to generate <i>c-UBC1</i> in pET 28(a).	43
Table 2.3	Comparison of linker sequence of UBC1 homologs of <i>Saccharomyces cerevisiae</i> with organisms of different phyla.	47
Table 2.4	Doubling times of YWO5 cells with $\Delta ubc1$ mutation transformed with plasmids expressing UBC1 and c-UBC1.	51
Table 2.5	Values of various secondary structures obtained from CD spectral analysis of UBC1 and c-UBC1	58
Table 3.1	UBC4 variants constructed, codons originally present in UBC4 and codons substituted from UBC5 for required amino acid substitutions are listed in this table.	72
Table 3.2	List of primers used for the construction of variants of UBC4 gene.	73
Table 3.3 (a)	Interactions of UBC4 with their cellular localisation and functions.	80
Table 3.3 (b)	Interactions of UBC5 with their cellular localisation and functions.	88
Table 3.3 (c)	Common interactions of UBC4/5 with their cellular localisation and functions.	92
Table 3.4	Theoretical prediction of change in protein stability of UBC4 after incorporating the substitution from UBC5 calculated using mCSM (mutation Cutoff Scanning Matrix).	94

Table 3.5	Determination of doubling time of UBC4 variants.	102
Table 3.6	Survival of <i>S. cerevisiae</i> MHY508 cells, expressing UBC4 variants from UBC4 WT series of plasmids exposed to heat stress (37°C) for various time intervals.	104
