

LIST OF TABLES

NO.	TITLE	PAGE
CHAPTER 1		
1.1	Average levels of phenols in wastewaters of various Industries	3
1.2	Advantage and limitations of different technologies for phenolic waste removal from industrial effluents	5
1.3	Fly ash generation and utilization in India	11
CHAPTER 2		
2.1	Summary of work published on adsorption of phenols (Data correlation by Freundlich and Langmuir Isotherms)	23
2.2	Summary of work published on adsorption of phenols (Data correlation by Redlich Peterson, Toth, Radke Prausnitz and Fritz Schulnder Isotherms)	30
2.3	Phenolytic Microorganisms	35
2.4	Comparison of growth kinetics reported in literature for the treatment of phenolic wastes	38
2.5	Classification of different AOPs	54
2.6	Summary of compounds degraded by various researchers using Photochemical oxidation	58
2.7	Summary of compounds degraded by various researchers using PFDP	64
2.8	Summary of compounds degraded by various researchers using PCD	69
2.9	Effect of AOP pretreatment on biological properties (+ positive effect, - negative effect, 0 insignificant effect)	77
2.10	Summary of compounds degraded by various researchers using Solar Energy	78
CHAPTER 3		
3.1	Parameters of physical adsorption and chemisorption	97
3.2	Chemical composition of different fly ash	110
3.3	Physical properties of adsorbents	111
3.4	Size analysis of the fly ash and activated carbon	111

3.5	Effect of initial concentration on % removal of phenols	113
3.6	Effect of pH on % removal of phenols by different adsorbents	119
3.7	Effect of mass of adsorbents on % removal of phenols	121
3.8	Effect of salt on % removal of phenols	126
3.9	List of parameter values of six adsorption isotherms for different systems investigated	133
3.10	Determination of Thermodynamic parameters	149
3.11	Rate constants for 1 st and 2 nd order and diffusion controlled adsorption of phenols on to fly ash A, B, C, D & activated carbon	153
3.12	Initial diffusion coefficient, Entropy of activation and Activation energy for diffusion controlled adsorption	167
CHAPTER 4		
4.1	Medium for storage	184
4.2	Growth kinetic parameter values of Monod's and linearized Haldane's model for biodegradation of phenol, 3-aminophenol and catechol using <i>P. aeruginosa</i>	211
4.3	Haldane's kinetic parameter values for biodegradation of phenol, 3-aminophenol and catechol using <i>P. aeruginosa</i>	211
CHAPTER 5		
5.1	Physical properties of activated carbon used in the study	223
5.2	Size analysis of activated carbon	223
5.3	List of parameter values of six adsorption isotherms for different systems investigated	224
5.4	Kinetic parameters for adsorption on activated carbon in presence of minimal nutrient medium	229
5.5	Effect of time and initial concentration on % removal of phenols by activated carbon	231
CHAPTER 6		
6.1	Thickness of Biofilm on Bioactive activated carbon particle	253
6.2	Percentage Bioregeneration of activated carbon	253
