

Acknowledgement

“HUMAN ACHIEVEMENT IS ONLY THROUGH GOD’S WILL”

Thanking is too frivolous a word for teachers and the effort they put into a students work. Nevertheless I have to express myself by the limited resources that language permits me to use.

Primarily I would like to thank CSIR for providing me with the NET fellowship to avail this opportunity.

I am glad to be able to work under our head Prof. Tara Mehta and would gratefudinously thank her for granting me with the permission.

This acknowledgement would never be honest if I do not confess that this effort is the result of perpetual brainstorming guidance and timely advice of my guide Prof. Harish Padh under whose protégé I have given shape to this work.

Sincere and heartfelt regards are extended to Dr. G. Naresh Kumar for granting priceless guidance and endless support not to mention his help by sharing his lab resources. I would not forget to appreciate the support I received from his lab students and also thank them for the same.

I am also indebted to Dr. V. Nanjundaiya, IISc, Bangalore for allowing me to train myself in handling *Dictyostelium* cultures.

Unless I would have got the DAAD scholarship, this work would not have received the technological backup it did in Germany. I thank the DAAD organization for selecting me as one of the lucky one.

A part of this work was completed at the Institute of Pharmaceutical Biology, Johann Wolfgang Goethe University, Frankfurt, Germany under the expert counseling of Prof. Theodor Dingermann. I gratefully thank him firstly to invite me to his institute and secondly for all the support I received from his lab students. Hearty thanks are also extended to Dr. Thomas Winkler for his timely help and advice. Without his support I would be unable to achieve these results in a land so foreign to me.

A friend in need is a friend indeed and my friends KK, Siddharth, Dr. Mukta Mohan and Jyoti have indeed proven this correct, but for their role as a great succour to this project, I would never be writing this acknowledgement.

Grateful thanks are also extended to all department staff members, my labmates Sonia, Bhavesh and Nidhi.

I also thank Sanjeev, Mausi and my entire family for providing me the much desired strength specially in those weak moments.

I finally dedicate this work to my parents and Bhabhi whose unquestioned support and belief in me puts me in this place today.

Meena Rai
