Sr. No.	CONTENTS	Page
	CHAPTER 1 INTRODUCTION	1- 4
1.1	PREAMBLE	1
1 2	RESEARCH AIM	2
1.3	BASIC PROBLEM	3
1.4	BASIC CONSIDERATION	3
1.5	OBJECTIVES	4
	CHAPTER 2 LITERATURE REVIEW	5-68
2.1	INTRODUCTION	5
2.2	MARKET FOR TEXTILE COMPOSITES	5
2.3	TEXTILE FLEXIBLE COMPOSITE	11
2.3.1	Manufacturing of Thermoplastic Composite	11
2.4	TEXTILE PREFORMS	13
2.4.1	Classification of Performs	14
	<i>a) Woven Preforms</i>	

	<i>b) Knitted and Braided Preforms</i>	
	<i>c) Nonwoven Preforms</i>	
	<i>d) Three-dimensional Preforms</i>	
	<i>e) Preforms from Commingled yarn</i>	
2.4.2	Characteristics of Textile Performs	17
2.5	DIFFERENT HYBRID YARN STRUCTURES	18
2.5.1	New Hybrid Yarns for Continuous Fibre Reinforced Thermoplastic	20
2.6	COMMINGLING PROCESS	22
2.6.1	Basic Principle of Commingling Process	22
2.6.2	Basic Airflow Analysis	23
2.6.3	Commingled Yarn Structures	25
2.7	FACTORS AFFECTING COMMINGLING PROCESS	26
2.7.1	Effect of Raw Material Parameters	27
2.7.2	Process Variables	28
	<i>a) Air pressure</i>	
	<i>b) Overfeed</i>	
	<i>c) Take up speed</i>	
	<i>d) Yarn tension</i>	
2.7.3	Design of Nozzle	30
	<i>a) Effect of Nozzle Design</i>	
	<i>b) Influence of jet design on blend homogeneity</i>	
2.8	DEVELOPMENT IN AIR TEXTUREING/ COMMINGLING MACHINES	35
2.8.1	Air Texturing Machine	36
2.8.2	Commingling Machine	38
2.8.3	Development on Nozzle Technology	39
	<i>a) Air-texturing nozzles</i>	
	<i>b) Commingling/interlacing nozzles</i>	
2.8.4	Covering Machine	41
2.9	QUALITY EVALUATION OF COMMINGLED YARN	43

2.9.1	Nip Frequency and Nip Regularity	44
	a) <i>Visual counting</i>	
	d) <i>Needle insertion</i>	
	c) <i>Thickness measurement</i>	
	d) <i>Optical scanning</i>	
	e) <i>RICa Interlace counter</i>	
2.9.2	Nip Stability	46
2.9.3	Blend Homogeneity	47
	a) <i>SEM Analysis</i>	
	b) <i>Image analysis</i>	
2.10	APPLICATIONS OF HYBRID YARN	50
2.10.1	Conductive Textiles	54
2.10.2	Methods of Imparting Electrical Properties at Fibre Stage	
	a) <i>Draw blending of Metal and Textile Silvers</i>	
	b) <i>Treatment with Metallic Salts</i>	
	c) <i>Galvanic Coating</i>	
	d) <i>Coating fibres with conductive particles</i>	
	<i>Suspended in a resin</i>	
	e) <i>Vacuum Spraying</i>	
2.10.3	Methods of Imparting Electrical Properties At Yarn Stage	56
	a) <i>Ring spinning</i>	
	b) <i>Open and spinning</i>	
	c) <i>Friction spinning</i>	
	d) <i>Wrapping spinning (Cover spinning)</i>	
	e) <i>Production of yarn from Bi-component fibres</i>	
	f) <i>Speciality yarns</i>	
2.10.4	Imparting Electrical Properties at Fabric Stage	61
2.11	ELECTRICAL PROPERTIES OF CONDUCTIVE MATERIAL	61
2.11.1	Dielectric Strength and its measurement	62

2.11.2	Surface Resistivity and Its Measurement	63
2.11.3	Volume Resistivity and Its Measurement	65
2.12	MANUFACTURE OF THERMOPLASTIC COMPOSITES	65
2.12.1	Sheet Forming of Thermoplastic Composites	65
2.12.2	Tape-Laying of Thermoplastic Composites	66
2.12.3	Liquid Moulding	67

CHAPTER 3 HOLLOW SPINDLE WRAPPING PROCESS 70-90

3.1	INTRODUCTION	70
3.2	OBJECTIVE	70
3.3	EXPERIMENTAL PROCEDURE	71
3.3.1	Principle of Hollow Spindle Wrapping Technique	71
3.3.2	Fabrication of Hollow Spindle Wrapping Machine	72
3.3.3	Wrap Level of Yarn (Twist level) of Hybrid Yarn	74
3.3.4	Preparation of Hybrid Yarns	77
3.3.5	Measurement of Hybrid Yarns Properties	79
	<i>a) Linear Density</i>	
	<i>b) Yarn Tenacity</i>	
3.4	RESULTS AND DISCUSSION	80
3.4.1	Effect of Core Yarn Properties on Hybrid Yarn Properties	80
3.4.2	Effect of Wrapped Yarn Properties on Hybrid Yarn Properties	84
3.4.3	Effect of Different Core Yarn Material on Hybrid Yarn Properties	86
3.4.4	Effect of Twist Level on Hybrid Yarn Properties	88
3.4.5	Analysis of Hybrid Yarn Structure by Scanning Electron Micrograph	89
3.5	CONCLUSIONS	90

CHAPTER 4 CONDUCTIVE HYBRID YARN	91-116
4.1	INTRODUCTION 91
4.2	OBJECTIVE 91
4.3	EXPERIMENTAL PROCEDURE 92
4.3.1	Preparation of Conductive Hybrid Yarn 92
4.3.2	Preparation of Hybrid Yarn Conductive Fabric 95
4.3.3	Preparation of Laminate 96
4.3.4	Testing Conductive Yarn, Performs and Laminates 98
	Properties
	<i>a) Yarn Testing</i>
	<i>b) Preforms Fabric</i>
	<i>c) Laminate (Composite sheet)</i>
4.3.5	Scanning Electron Micrograph 103
4.4	RESULTS AND DISCUSSION 104
4.4.1	Conductive hybrid yarn properties 104
	<i>a) Linear Density</i>
	<i>b) Strength and extension properties of conductive hybrid yarn</i>
	<i>c) Proportion of mass of parent yarn</i>
4.4.2	Conductive hybrid yarn fabric properties 110
	<i>a) Fabric Thickness</i>
	<i>b) Courses/inch and Wales /inch</i>
4.4.3	Laminate 110
	<i>a) Tensile strength and Flexural rigidity (N/mm^2)</i>
	<i>b) Dielectric Strength (KV/mm)</i>
	<i>c) Resistivity (Ohm)</i>
4.5	SEM OF CONDUCTIVE HYBRID YARNS AND LAMINATES 114
4.6	CONCLUSIONS 115

CHAPTER 5 COMMINGLING PROCESS	117-158
5.1	INTRODUCTION 117
5.2	MATERIALS AND METHODOLOGY 118
5.2.1	Raw Material 118
5.2.2	Fabrication of Equipment 119
	<i>a) Guide</i>
	<i>b) Nozzle</i>
	<i>c) Winding Device</i>
5.2.3	Yarn Passage Through Machine 123
5.2.4	Sample Preparation 123
5.2.5	Testing of Commingled Yarn 127
	<i>a) Tensile strength measurement</i>
	<i>b) Commingling characteristic</i>
	<i>c) SEM (Scanning Electron Micrograph)</i>
5.3	RESULTS AND DISCUSSION 129
5.3.1	Effect of Processing Parameters on Tensile Properties 129
	<i>a) Tenacity</i>
	<i>b) Modulus</i>
5.3.2	Effect of Processing Parameters on Mingling Characteristics of Hybrid Yarn 134
	<i>a) Nip frequency</i>
	<i>b) Nip stability</i>
	<i>c) Nip regularity</i>
5.3.3	Effect of Different Yarn Passage and Processing Parameter on Blending Homogeneity of Hybrid Yarn 140
5.4	CONCLUSIONS 142
5.5	FABRICATION OF COMMINGLING MACHINE 143

CHAPTER 6 COMMINGLING PARAMETERS 159-178

6.1	INTRODUCTION	159
6.2	EXPERIMENTAL	159
6.2.1	Raw Material	159
6.2.2	Preparation of Yarn Sample	160
6.2.3	Nozzle Specifications	162
6.2.4	Test Method of Coming Hybrid Yarn	163
6.3	RESULTS AND DISCUSSION	163
6.3.1	EFFECT of nozzle type on properties of commingled yarn a) Linear density b) Tensile properties of hybrid yarn c) Commingling characteristics of hybrid yarn	163
6.3.2	Effect of Different Types Of Nozzles on Homogeneity of Hybrid Yarn	173
6.3.3	Effect of Proportion of Glass: Polypropylene on Characteristics of Commingled Hybrid Yarn	173
6.3.4	Effect of Glass: Polypropylene Content on Homogeneity of Hybrid Yarn	177
6.4	CONCLUSIONS	178

CHAPTER 7 RESPONSE SURFACE ANALYSIS 179-206

7.1	INTRODUCTION	179
7.2	RESPONSE SURFACE METHODOLOGY	180
7.2.1	Box- Behnken Design	182
7.2.2	Response Surface Application	182
7.3	MATERIALS AND METHODOLOGY	183
7.3.1	Preparation of Yarn Sample	183
7.3.2	Box-Behnken Design	183
7.3.3	Measurement of Yarn Characteristics	184

7.4	RESULTS AND DISCUSSION	184
7.4.1	Effect Of Processing Parameters on Liner Density of Hybrid Yarn	187
7.4.2	Effect of Processing Parameters on Hybrid Yarn Tenacity	189
7.4.3	Effect of Processing Parameters on Extension of Hybrid Yarn	191
7.4.4	Effect of Processing Parameters on Hybrid Yarn Nip Frequency	193
7.4.5	Effect of Processing Parameters on Hybrid Yarn Nip Stability	195
7.4.6	Effect of Processing Parameters on Hybrid Yarn Nip regularity	197
7.5	STRUCTURE COMMINGLED HYBRID YARN	199
7.5.1	Cross section of Hybrid Yarn produced at Different Processing Condition	199
7.5.2	SEM of Hybrid Yarn Manufactured by Different Methods	202
7.6	CONCLUSION	205
	CHAPTER 8 FURTHER SCOPE OF RESEARCH	206
8.1	SUGGESTIONS FOR FURTHER RESEARCH WORK	206
	REFERENCES	207-214
	APPENDIX	215-226
	GLOSSARY	227-233
