

LIST OF FIGURES

FIGURE NO.	TITLE	PAGE NO.
4.1	TLC densitometric chromatogram of methanolic extract of green tea extract with gallic acid standard and catechin standard solution.	96
4.2	Effect of green tea extract on DPPH radical formation.	99
4.3	Effect of melatonin on DPPH radical formation.	99
4.4	Effect of lovastatin on DPPH radical formation.	100
4.5	Effect of resveratrol on DPPH radical formation.	100
4.6	Effect of green tea extract on NBT-Riboflavin-light induced superoxide release.	103
4.7	Effect of melatonin on NBT-Riboflavin-light induced superoxide release.	103
4.8	Effect of lovastatin on NBT-Riboflavin-light induced superoxide release.	104
4.9	Effect of resveratrol on NBT-Riboflavin-light induced superoxide release.	104
4.10	Effect of green tea extract on nitrite formation from released nitric oxide.	107
4.11	Effect of melatonin on nitrite formation from released nitric oxide.	107
4.12	Effect of lovastatin on nitrite formation from released nitric oxide.	108
4.13	Effect of resveratrol on nitrite formation from released nitric oxide.	108
4.14	Effect of green tea extract on iron catalyzed lipid peroxidation.	111
4.15	Effect of melatonin on iron catalyzed lipid peroxidation.	111
4.16	Effect of lovastatin on iron catalyzed lipid peroxidation.	112
4.17	Effect of resveratrol on iron catalyzed lipid peroxidation.	112
4.18	Effect of green tea extract on the serum levels of creatine kinase (CK) and Lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (acute study) in rats.	116
4.19	Effect of green tea extract on the levels of SGOT in doxorubicin induced cardiotoxicity (acute study) in rats.	116
4.20	Effect of melatonin on the serum levels of creatine kinase (CK) and Lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (acute study) in rats.	117
4.21	Effect of melatonin on the levels of SGOT in doxorubicin induced cardiotoxicity (acute study) in rats.	117
4.22	Effect of lovastatin on the serum levels of creatine kinase (CK) and Lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (acute study) in rats.	118
4.23	Effect of lovastatin on the levels of SGOT in doxorubicin induced cardiotoxicity (acute study) in rats.	118
4.24 a-e	Recordings showing changes in Electrocardiographic (ECG) parameters.	122

4.25	Effect of green tea extract on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (acute study) in rats.	123
4.26	Effect of green tea extract on Heart Rate in doxorubicin induced cardiotoxicity (acute study) in rats.	123
4.27a-d	Recordings showing changes in Electrocardiographic (ECG) parameters.	125
4.28	Effect of melatonin on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (acute study) in rats.	126
4.29	Effect of melatonin on Heart Rate in doxorubicin induced cardiotoxicity (acute study) in rats.	126
4.30a-d	Recordings showing changes in Electrocardiographic (ECG) parameters.	128
4.31	Effect of lovastatin on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (acute study) in rats.	129
4.32	Effect of lovastatin on Heart Rate in doxorubicin induced cardiotoxicity (acute study) in rats.	129
4.33	Photomicrographs showing effect of green tea extract on the heart of doxorubicin treated rats (acute study).	142
4.34	Photomicrographs showing effect of melatonin on the heart of doxorubicin treated rats (acute study).	143
4.35	Photomicrographs showing effect of lovastatin on the heart of doxorubicin treated rats (acute study).	144
4.36	Effect of green tea extract on the serum levels of creatine kinase (CK) and lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (chronic study) in rats.	148
4.37	Effect of green tea extract on the levels of SGOT in doxorubicin induced cardiotoxicity (chronic study) in rats.	148
4.38	Effect of melatonin on the serum levels of creatine kinase (CK) and lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (chronic study) in rats.	149
4.39	Effect of melatonin on the levels of SGOT in doxorubicin induced cardiotoxicity (chronic study) in rats.	149
4.40	Effect of lovastatin on the serum levels of creatine kinase (CK) and lactate dehydrogenase (LDH) in doxorubicin induced cardiotoxicity (chronic study) in rats.	150
4.41	Effect of lovastatin on the levels of SGOT in doxorubicin induced cardiotoxicity (chronic study) in rats.	150
4.42 a-e	Recordings showing changes in Electrocardiographic (ECG) parameters.	154
4.43	Effect of green tea extract on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (chronic study) in rats.	155
4.44	Effect of green tea extract on Heart Rate in doxorubicin induced cardiotoxicity (chronic study) in rats.	155

4.45a-d	Recordings showing changes in Electrocardiographic (ECG) parameters.	157
4.46	Effect of melatonin on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (chronic study) in rats.	158
4.47	Effect of melatonin on Heart Rate in doxorubicin induced cardiotoxicity (chronic study) in rats.	158
4.48a-d	Recordings showing changes in Electrocardiographic (ECG) parameters.	160
4.49	Effect of lovastatin on ST interval and QT interval of ECG in doxorubicin induced cardiotoxicity (chronic study) in rats.	161
4.50	Effect of lovastatin on Heart Rate in doxorubicin induced cardiotoxicity (chronic study) in rats.	161
4.51	Effect of green tea extract on time course of changes in Diastolic BP in animals chronically treated with doxorubicin.	176
4.52	Effect of green tea extract on Diastolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	176
4.53	Effect of green tea extract on time course of changes in Systolic BP in animals chronically treated with doxorubicin.	177
4.54	Effect of green tea extract on systolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	177
4.55	Effect of green tea extract on time course of changes in Mean BP in animals chronically treated with doxorubicin.	178
4.56	Effect of green tea extract on Mean BP after completion of treatment schedule in animals chronically treated with doxorubicin.	178
4.57	Effect of melatonin on time course of changes in Diastolic BP in animals chronically treated with doxorubicin.	180
4.58	Effect of melatonin on Diastolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	180
4.59	Effect of melatonin on time course of changes in Systolic BP in animals chronically treated with doxorubicin.	181
4.60	Effect of melatonin on Systolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	181
4.61	Effect of melatonin on time course of changes in Mean BP in animals chronically treated with doxorubicin.	182
4.62	Effect of melatonin on Mean BP after completion of treatment schedule in animals chronically treated with doxorubicin.	182
4.63	Effect of lovastatin on time course of changes in Diastolic BP in animals chronically treated with doxorubicin.	184

4.64	Effect of lovastatin on Diastolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	184
4.65	Effect of lovastatin on time course of changes in Systolic BP in animals chronically treated with doxorubicin.	185
4.66	Effect of lovastatin on Systolic BP after completion of treatment schedule in animals chronically treated with doxorubicin.	185
4.67	Effect of lovastatin on time course of changes in Mean BP in animals chronically treated with doxorubicin.	186
4.68	Effect of lovastatin on Mean BP after completion of treatment schedule in animals chronically treated with doxorubicin.	186
4.69	Effect of green tea extract on vascular reactivity to noradrenaline (1 and 2 $\mu\text{g} / \text{kg}$) in animals chronically treated with doxorubicin.	190
4.70	Effect of green tea extract on vascular reactivity to adrenaline (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	190
4.71	Effect of green tea extract on vascular reactivity to isoprenaline (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	191
4.72	Effect of green tea extract on vascular reactivity to phenylephrine (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	191
4.73	Effect of green tea extract on vascular reactivity to angiotensin (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	192
4.74 a-e	Tracings of arterial BP of anaesthetized rat after administration of noradrenaline, adrenaline, isoprenaline, phenylephrine and angiotensin.	193
4.75	Effect of melatonin on vascular reactivity to noradrenaline (1 and 2 $\mu\text{g} / \text{kg}$) in animals chronically treated with doxorubicin.	195
4.76	Effect of melatonin on vascular reactivity to adrenaline (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	195
4.77	Effect of melatonin on vascular reactivity to isoprenaline (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	196
4.78	Effect of melatonin on vascular reactivity to phenylephrine (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	196
4.79	Effect of melatonin on vascular reactivity to angiotensin (1 and 2 $\mu\text{g}/\text{kg}$) in animals chronically treated with doxorubicin.	197
4.80a-d	Tracings of arterial BP of anaesthetized rat after administration of noradrenaline, adrenaline, isoprenaline, phenylephrine and angiotensin.	198

4.81	Effect of lovastatin on vascular reactivity to noradrenaline (1 and 2 µg / kg) in animals chronically treated with doxorubicin.	200
4.82	Effect of lovastatin on vascular reactivity to adrenaline (1 and 2 µg/kg) in animals chronically treated with doxorubicin.	200
4.83	Effect of lovastatin on vascular reactivity to isoprenaline (1 and 2 µg/kg) in animals chronically treated with doxorubicin.	201
4.84	Effect of lovastatin on vascular reactivity to phenylephrine (1 and 2 µg/kg) in animals chronically treated with doxorubicin.	201
4.85	Effect of lovastatin on vascular reactivity to angiotensin (1 and 2 µg/kg) in animals chronically treated with doxorubicin.	202
4.86a-d	Tracings of arterial BP of anaesthetized rat after administration of noradrenaline, adrenaline, isoprenaline, phenylephrine and angiotensin.	203
4.87	Photomicrographs showing effect of green tea extract on the heart of doxorubicin treated rats (chronic study).	205
4.88	Photomicrographs showing effect of melatonin on the heart of doxorubicin treated rats (chronic study).	206
4.89	Photomicrographs showing effect of lovastatin on the heart of doxorubicin treated rats (chronic study).	207
4.90	Effect of green tea extract on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (acute study) in rats.	211
4.91	Effect of green tea extract on the serum levels of urea and BUN in cisplatin induced nephrotoxicity (acute study) in rats.	211
4.92	Effect of melatonin on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (acute study) in rats.	212
4.93	Effect of melatonin on the serum levels of urea and BUN in cisplatin induced nephrotoxicity (acute study) in rats.	212
4.94	Effect of lovastatin on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (acute study) in rats.	213
4.95	Fig. 4.95: Effect of lovastatin on the serum levels of urea and BUN in cisplatin induced nephrotoxicity (acute study) in rats.	213
4.96	Photomicrographs showing effect of green tea extract on the kidney of cisplatin treated rats (acute study).	225
4.97	Photomicrographs showing effect of melatonin on the kidney of cisplatin treated rats (acute study).	226
4.98	Photomicrographs showing effect of lovastatin on the kidney of cisplatin treated rats (acute study).	227

4.99	Effect of green tea extract on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (chronic study) in rats.	232
4.100	Effect of green tea extract on the serum levels of urea and BUN in cisplatin induced nephrotoxicity (chronic study) in rats.	232
4.101	Effect of melatonin on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (chronic study) in rats.	233
4.102	Effect of melatonin on the serum levels of urea and BUN in cisplatin induced nephrotoxicity (chronic study) in rats.	233
4.103	Effect of lovastatin on the serum levels of creatinine and uric acid in cisplatin induced nephrotoxicity (chronic study) in rats.	234
4.104	Effect of lovastatin on the serum levels of urea and BUN in cisplatin-induced nephrotoxicity (chronic study) in rats.	234
4.105	Photomicrographs showing effect of green tea extract on the kidney of cisplatin treated rats (chronic study).	246
4.106	Photomicrographs showing effect of melatonin on the kidney of cisplatin treated rats (chronic study).	247
4.107	Photomicrographs showing effect of lovastatin on the kidney of cisplatin treated rats (chronic study).	248
4.108	Effect of green tea extract on the serum testosterone in doxorubicin induced testicular toxicity (acute study) in rats.	251
4.109	Effect of melatonin on the serum testosterone in doxorubicin induced testicular toxicity (acute study) in rats.	251
4.110	Effect of lovastatin on the serum testosterone in doxorubicin induced testicular toxicity (acute study) in rats.	252
4.111	Effect of green tea extract on sperm count in doxorubicin induced testicular toxicity (acute study) in rats.	255
4.112	Effect of melatonin on sperm count in doxorubicin induced testicular toxicity (acute study) in rats.	255
4.113	Effect of lovastatin on sperm count in doxorubicin induced testicular toxicity (acute study) in rats.	256
4.114	Photomicrographs showing effect of green tea extract on the testes of doxorubicin treated rats (acute study).	267
4.115	Photomicrographs showing effect of melatonin on the testes of doxorubicin treated rats (acute study).	268
4.116	Fig. 4.116: Photomicrographs showing effect of lovastatin on the testes of doxorubicin treated rats (acute study).	269
4.117	Effect of green tea extract on the serum testosterone in doxorubicin induced testicular toxicity (chronic study) in rats.	272

4.118	Effect of melatonin on the serum testosterone in doxorubicin induced testicular toxicity (chronic study) in rats.	272
4.119	Effect of lovastatin on the serum testosterone in doxorubicin induced testicular toxicity (chronic study) in rats.	273
4.120	Effect of green tea extract on sperm count in doxorubicin induced testicular toxicity (chronic study) in rats.	276
4.121	Effect of melatonin on sperm count in doxorubicin induced testicular toxicity (chronic study) in rats.	276
4.122	Effect of lovastatin on sperm count in doxorubicin induced testicular toxicity (chronic study) in rats.	277
4.123	Photomicrographs showing effect of green tea extract on the testes of doxorubicin treated rats (chronic study).	290
4.124	Photomicrographs showing effect of melatonin on the testes of doxorubicin treated rats (chronic study).	291
4.125	Photomicrographs showing effect of lovastatin on the testes of doxorubicin treated rats (chronic study).	292
4.126	Effect of green tea extract on the serum testosterone in cisplatin induced testicular toxicity (acute study) in rats.	295
4.127	Effect of melatonin on the serum testosterone in cisplatin induced testicular toxicity (acute study) in rats.	295
4.128	Effect of lovastatin on the serum testosterone in cisplatin induced testicular toxicity (acute study) in rats.	296
4.129	Effect of green tea extract on sperm count in cisplatin induced testicular toxicity (acute study) in rats.	299
4.130	Effect of melatonin on sperm count in cisplatin induced testicular toxicity (acute study) in rats.	299
4.131	Effect of lovastatin on sperm count in cisplatin induced testicular toxicity (acute study) in rats.	300
4.132	Photomicrographs showing effect of green tea extract on the testes of cisplatin-treated rats (acute study).	312
4.133	Photomicrographs showing effect of melatonin on the testes of cisplatin treated rats (acute study).	313
4.134	Photomicrographs showing effect of lovastatin on the testes of cisplatin treated rats (acute study).	314
4.135	Effect of green tea extract on the serum testosterone in cisplatin induced testicular toxicity (chronic study) in rats.	317
4.136	Effect of melatonin on the serum testosterone in cisplatin induced testicular toxicity (chronic study) in rats.	317
4.137	Effect of lovastatin on the serum testosterone in cisplatin induced testicular toxicity (chronic study) in rats.	318
4.138	Effect of green tea extract on sperm count in cisplatin induced testicular toxicity (chronic study) in rats.	321
4.139	Effect of melatonin on sperm count in cisplatin induced testicular toxicity (chronic study) in rats.	321

4.140	Effect of lovastatin on sperm count in cisplatin induced testicular toxicity (chronic study) in rats.	322
4.141	Photomicrographs showing effect of green tea extract on the testes of cisplatin treated rats (chronic study).	335
4.142	Photomicrographs showing effect of melatonin on the testes of cisplatin treated rats (chronic study).	336
4.143	Photomicrographs showing effect of lovastatin on the testes of cisplatin treated rats (chronic study).	337
4.144	Effect of resveratrol on the serum levels of creatine kinase (CK) and Lactate dehydrogenase (LDH) in DMBA induced mammary cancer in rats.	341
4.145	Effect of resveratrol on the level of SGOT in DMBA induced mammary cancer in rats.	341
4.146	Photomicrographs showing effect of resveratrol on the heart of rats in DMBA induced mammary cancer in rats.	347
4.147	Photomicrographs showing effect of resveratrol on the tumors of rats in DMBA induced mammary cancer in rats.	348
