## Chapter I Introduction

|     |   |    |
|-----|---|----|
| 1.0 | Introduction to rapid pace of polymers and polymer composites             | 2  |
| 1.1 | Classification of composites  | 2  |
|     | 1.1.1 Classification based on reinforcements                              | 3  |
|     | 1.1.2. Classification Based on Matrix                                     | 3  |
| 1.2 | Classification of polymer composites                                      | 4  |
|     | 1.2.1 Promising Applications of polymer composites/nanocomposites         | 5  |
|     | 1.2.1.1 Focussed or Novel application                                     | 5  |
|     | (1) Gas sensing   | 5  |
|     | (2) EMI shielding   | 6  |
| 1.3 | Science with Ion Beam Irradiation   | 7  |
|     | 1.3.1 Ion solid interaction in materials                                  | 8  |
|     | 1.3.2 Energy losses   | 10 |
|     | 1.3.2.1 Nuclear energy loss   | 11 |
|     | 1.3.2.2 Electronic energy loss  | 11 |
|     | 1.3.2.3 Overview of the slowing down process                              | 12 |
| 1.4 | Overview on Ion beam induced modification                                 | 13 |
|     | 1.4.1 Low energy ions   | 13 |
|     | 1.4.2 Swift heavy ions  | 14 |
| 1.5 | Ion beam induced modifications in polymeric films                         | 14 |
|     | 1.5.1. Dielectric properties and improvements due to ion beam irradiation | 16 |

|   |    |
|---|----|
| 1.5.2 Structural changes in composite materials                         | 18 |
| 1.5.3 Optical properties of materials upon irradiation                  | 19 |
| 1.5.4 Thermal properties of materials with irradiation                  | 20 |
| 1.5.5 Changes in Surface morphology                                     | 20 |
| 1.6 literature survey on selection of filler nanoparticles (Ag, Cu, Ni) | 20 |
| 1.7 Reviews on selected polymers (PMMA/PS)                              | 24 |
| 1.8 Objective of work   | 27 |
| References  | 29 |

## **Chapter II Materials and Experimental Techniques**

|   |    |
|---|----|
| 2.0 Introduction  | 42 |
| 2.1 Materials   | 42 |
| 2.1.1 Selected polymers                                 | 42 |
| (a) Polymethyl methacrylate (PMMA)                      | 42 |
| (b) Polystyrene   | 43 |
| 2.1.2 Fillers   | 44 |
| (a) Silver nanoparticles (Ag)                           | 45 |
| (b) Nickel nanoparticles (Ni)                           | 45 |
| (c) Copper nanoparticles (Cu)                           | 46 |
| 2.1.3 Polymer nanocomposites                            | 46 |
| 2.1.4. Thickness measurement of the composite films     | 47 |
| 2.2 Ion beam irradiation                                | 47 |
| 2.2.1 The Pelletron accelerator                         | 48 |
| 2.2.2 Calculation of range and energy loss by SRIM code | 51 |
| 2.2.3 Irradiations                                      | 54 |
| 2.3 Experimental characterization techniques            | 56 |

|   |    |
|---|----|
| 2.3.1 X-ray Diffraction (XRD)                               | 56 |
| 2.3.2 Differential Scanning Calorimetry (DSC)               | 59 |
| 2.3.3 UV-visible spectroscopy                               | 61 |
| 2.3.4 Scanning Electron Microscope: (SEM)                   | 64 |
| 2.3.5 Quantum Interference Device (SQUID)                   | 67 |
| 2.3.7 Dielectric properties (Impedance phase-gain analyzer) | 68 |
| (a) AC electrical conductivity                              | 70 |
| (b) Dielectric Constant                                     | 73 |
| (c) Dielectric Loss   | 74 |
| References  | 76 |

### **Chapter – III Effect of swift heavy ions on physical properties of PMMA/Ag and PS/Ag nanocomposites**

|  |     |
|--|-----|
| 3.0 Introduction   | 80  |
| 3.1 Effect of swift heavy ions irradiation on PMMA + Ag nanocomposites | 81  |
| 3.1.1 X-ray diffraction analysis                                       | 81  |
| 3.1.2 Thermal response (Diferencial scanning calorimetry (DSC))        | 85  |
| 3.1.3 Optical response   | 87  |
| 3.1.4 Surface morphology   | 90  |
| 3.1.5 AC Electrical Frequency Response                                 | 92  |
| Conclusion   | 101 |
| 3.2 Effect of swift heavy ions irradiation on PS + Ag nanocomposites   | 102 |
| 3.2.1 X-ray diffraction analysis                                       | 102 |
| 3.2.2 Thermal response (Diferencial scanning calorimetry (DSC))        | 104 |
| 3.2.3 Optical response   | 106 |
| 3.2.4 Surface morphology   | 111 |
| 3.2.5 AC Electrical Frequency Response                                 | 113 |

|             |     |
|-------------|-----|
| Conclusion  | 122 |
| 3.3 Summary | 123 |
| References  | 127 |

**Chapter – IV Effect of swift heavy ions on physical properties of PMMA/Cu and PS/Cu nanocomposites**

|  |     |
|--|-----|
| 4.0 Introduction   | 131 |
| 4.1 Effect of swift heavy ions irradiation on PMMA + Cu nanocomposites | 132 |
| 4.1.1 X-ray diffraction analysis                                       | 132 |
| 4.1.2 Thermal response (Diferencial scanning calorimetry (DSC))        | 135 |
| 4.1.3 Optical response   | 137 |
| 4.1.4 Surface morphology   | 141 |
| 4.1.5 AC Electrical Frequency Response                                 | 142 |
| Conclusion   | 151 |
| 4.2 Effect of swift heavy ions irradiation on PS + Cu nanocomposites   | 152 |
| 4.2.1 X-ray diffraction analysis                                       | 152 |
| 4.2.2 Thermal response (Diferencial scanning calorimetry (DSC))        | 154 |
| 4.2.3 Optical response   | 156 |
| 4.2.4 Surface morphology   | 160 |
| 4.2.5 AC Electrical Frequency Response                                 | 161 |
| Conclusion   | 170 |
| 4.3 Summary  | 171 |
| References   | 175 |

**Chapter –V Effect of swift heavy ions on physical properties of PMMA/Ni and PS/Ni nanocomposites**

|  |     |
|--|-----|
| 5.0 Introduction   | 180 |
| 5.1 Effect of swift heavy ions irradiation on PMMA + Ni nanocomposites | 181 |

|   |            |
|---|------------|
| 5.1.1 X-ray diffraction analysis  | 181        |
| 5.1.2 Thermal response (Differential scanning calorimetry (DSC))            | 184        |
| 5.1.3 Optical response  | 186        |
| 5.1.4 Surface morphology  | 190        |
| 5.1.5 Magnetic properties   | 191        |
| 5.1.6 AC Electrical Frequency Response                                      | 194        |
| Conclusion  | 203        |
| <b>5.2 Effect of swift heavy ions irradiation on PS + Ni nanocomposites</b> | <b>205</b> |
| 5.2.1 X-ray diffraction analysis  | 205        |
| 5.2.2 Thermal response (Differential scanning calorimetry (DSC))            | 207        |
| 5.2.3 Optical response  | 209        |
| 5.2.4 Surface morphology  | 213        |
| 5.2.5 Magnetic properties   | 214        |
| 5.2.6 AC Electrical Frequency Response                                      | 217        |
| Conclusion  | 226        |
| <b>5.3 Summary</b>  | <b>227</b> |
| References  | 231        |
| <b>Chapter –VI Summary and conclusion</b>                                   | <b>235</b> |
| <b>Future Plan</b>  | <b>250</b> |
