

List of Figures

No.	Title	Page No.
1.1	Estimated number of diabetic subjects in India.	6
1.2	Recent population based studies showings the prevalence of type 2 diabetes in different parts of India.	8
1.3	Differences in mortality rates among diabetic and non-diabetic individuals - the Chennai urban population study (CUPS).	11
1.4	General features of hyperglycemia-induced tissue damage.	12
1.5	Hyperglycemia increases flux through the polyol pathway.	13
1.6	Increased production of AGE precursors and its pathologic consequences.	15
1.7	Consequences of hyperglycemia-induced activation of PKC.	16
1.8	Hyperglycemia increases flux through hexosamine pathway.	17
1.9	Hyperglycemia-induced production of superoxide by the mitochondrial electron transport chain.	18
1.10	Mitochondrial overproduction of superoxide derivatives four major pathways of glycemic damage by inhibiting GAPDH.	21
1.11	ROS-induced DNA damage activates PARP and modifies GAPDH	23
1.12	The Unifying mechanism of hyperglycemia-induced cellular damage.	24
1.13	Insulin secretion and pancreatic- β -cell apoptosis.	25
1.14	Insulin signal pathway and insulin insensitive.	38
1.15	Action sites of western medicine in diabetes treatment.	40
1.16	Action sites of herbs in diabetes treatment.	43
1.17	Action sites of herbs in diabetes treatment.	44
3.1	Hepatic fructose metabolism: A highly lipogenic pathway.	142
3.2	Effect of EL treatment on oral glucose tolerance test in fructose-induced insulin resistant rat model.	148
3.3	Effect of EL treatment on lipid profile of fructose-induced insulin resistant rat model.	149
3.4	Effect of EL treatment on serum CK-MB activity in fructose-induced insulin resistant rat model	149
3.5	Effect of EL treatment on serum lactate dehydrogenase activity of fructose-induced insulin resistant rat model	149
3.6	Effect of EL treatment on serum glutamic oxaloacetic transaminase in fructose-induced insulin resistant rat model.	149

3.7	Effect of EL treatment on platelet aggregation in fructose-induced insulin resistant rat model.	149
3.8	Effect of EL treatment on plasma prothrombin & activated partial thromboplastin time in fructose-induced insulin resistant rat model.	151
3.9	Effect of EL treatment on platelet count in fructose-induced insulin resistant rat model.	151
3.10	Effect of EL treatment on systolic blood pressure in fructose-induced insulin resistant rat model.	151
3.11	Effect of EL treatment on blood lipid peroxidation level in fructose-induced insulin resistant rat model.	151
3.12	Effect of EL treatment on activity of testicular enzyme 3 β -HSD, 17 β -HSD and Testosterone in fructose-induced insulin resistant rat model.	151
3.13	Effect of EL treatment on blood reduced glutathione level in fructose-induced insulin resistant rat model.	152
3.14	Effect of EL treatment on blood superoxide dismutase activity in fructose-induced insulin resistant rat model.	152
3.15	Effect of EL treatment on blood glutathione peroxidase activity in fructose-induced insulin resistant rat model.	152
3.16	Effect of EL treatment on blood catalase activity in fructose-induced insulin resistant rat model.	152
3.17	Effect of EL treatment on vascular response to phenylephrine and adrenaline in fructose-induced insulin resistant rat model.	152
3.18	Effect of EL treatment on vascular response to isoprenaline and ACH in fructose-induced insulin resistant rat model.	152
3.19	Effect of EL on serum SGPT level	153
4.1	Overview of the putative sequence of events leading to β -cell death in animal models of type 1 and type 2 diabetes. T1D, type 1 diabetes; T2D, type 2 diabetes.	170
4.2	Proposed model for the different pathways contributing to the execution of cytokine-induced β -cell apoptosis.	171
4.3	Dose dependent and time dependent study of EL on islets of langerhans exposed to 50 μ M H ₂ O ₂ .	172
4.4	Effect of EL treatment of PS/PI staining on (A), DNA tailing in comet assay (B), DCF-DA fluorescence staining (C) of islets of Langerhans exposed to 50 μ M H ₂ O ₂ .	174

4.5	Effect of EL on Caspase-3 activity in H ₂ O ₂ exposed islets	175
4.6	Effect of EL on lipid peroxidation of islets of langerhans exposed to H ₂ O ₂	175
4.7	Effect of EL on reduced glutathione of islets of langerhans exposed to H ₂ O ₂ .	175
4.8	Effect of EL on superoxide dismutase activity of islets of langerhans exposed to H ₂ O ₂ .	175
4.9	Effect of EL on catalase activity of islets of langerhans exposed to H ₂ O ₂ .	175
4.10	Effect of EL on glutathione peroxidase activity of islets of langerhans exposed to H ₂ O ₂ .	175
5A.1	Classification of acute renal failure	185
5A.2	Most common causes of tubulointerstitial nephritis.	187
5A.3	Factors that predispose to acute renal failure (ARF)	187
5a.1	Effect of EL on kidney SOD levels in GM-induced nephrotoxicity.	195
5a.2	Effect of EL on kidney LPO levels in GM-induced nephrotoxicity.	195
5a.3	Effect of EL on kidney GSH levels in GM-induced nephrotoxicity.	195
5a.4	Effect of EL on kidney GPx activity in GM-induced nephrotoxicity.	195
5a.5	Effect of EL on kidney Catalase activity in GM-induced nephrotoxicity.	195
5b.1	An overview depicting activation of different signaling pathways by high glucose ambience with altered expression of various genes and cellular dysfunctions leading to diabetic nephropathy.	202
5b.2	Effect of EL treatment on blood glucose levels.	214
5b.3	Effect of EL treatment on glycosylated hemoglobin levels.	214

5b.4	Effect of EL treatment on Creatinine levels.	214
5b.5	Effect of EL treatment on Urea levels.	214
5b.6	Effect of EL treatment on TG, TC and LDL levels.	214
5b.7	Effect of EL treatment on HDL and VLDL levels.	214
5b.8	Effect of EL treatment on platelet aggregation.	215
5b.9	Effect of EL treatment on PT, APTT.	215
5b.10	Effect of EL treatment on SBP and DBP.	215
5b.11	Effect of EL and on AR activity.	215
5b.12	Effect of EL treatment on Na-K ATPase activity.	215
5b.13	Effect of EL treatment on lipid peroxidation.	215
5b.14	Effect of EL treatment on GSH content.	216
5b.15	Effect of EL treatment on SOD activity.	216
5b.16	Effect of EL treatment on GPx activity.	216
5b.17	Effect of EL treatment on catalase activity.	216
6a.1	Effect of EL on blood glucose levels of diabetic rats.	257
6a.2	Effect of EL on thermal nociception responses.	257
6a.3	Effect of EL on formalin induced flinches.	257
6a.4	Effect of EL on sciatic nerve aldose reductase activity.	257
6a.5	Effect of EL on sciatic nerve Na ⁺ -K ⁺ -ATPase activity.	257
6a.6	Effect of EL sciatic nerve GSH content.	257
6a.7	Effect of EL on lipid peroxidation of sciatic nerve.	258
6a.8	Effect of EL on superoxide dismutase activity of sciatic nerve	258
6a.9	Effect of EL on catalase activity of sciatic nerve	258
6a.10	Effect of EL on Glutathione peroxidase activity of sciatic nerve	258
6b.1	Effect of EL treatment on body weight and blood glucose levels	272
6b.2	Effect of EL treatment on activities of androgenic key enzymes, $\Delta^5,3\beta$ -HSD and 17 β -HSD and plasma testosterone	272

	levels	
6b.3	Effect of EL treatment on epididymal lactate dehydrogenase enzyme activity	272
6b.4	Effect of EL treatment on prostatic acid phosphatase activity	272
6b.5	Effect of EL treatment on aldose reductase activity and fructose content in male reproductive tract	272
6b.6	Effect of EL treatment on Vitamins C and LPO levels in reproductive tissues	272
6b.7	Effect of EL treatment on Vitamins C and LPO levels in reproductive tissues	273
6c.1	Effect of EL treatment on blood glucose levels.	283
6c.2	Effect of EL treatment on glycosylated hemoglobin levels.	283
6c.3	Effect of EL treatment on lipid profile.	283
6c.4	Effect of EL treatment on lipid profile.	283
6c.5	Effect of EL treatment on serum CK-MB activity.	283
6c.6	Effect of EL treatment on serum LDH activity.	283
6c.7	Effect of EL treatment on serum SGOT activity.	284
6c.8	Effect of EL treatment on plasma prothrombine and partial activated thromboplastine time.	284
6c.9	Effect of EL treatment on platelet aggregation.	284
6c.10	Effect of EL treatment on platelet counts.	284
6c.11	Effect of EL treatment on systolic blood pressure.	284
6c.12	Effect of EL treatment on heart Ca ²⁺ -ATPase.	285
6c.13	Effect of EL treatment on heart Na ⁺ -K ⁺ -ATPase.	285
6c.14	Effect of EL treatment on lipid peroxidation.	285
6c.15	Effect of EL treatment on GSH content.	285
6c.16	Effect of EL treatment on SOD activity.	285
6c.17	Effect of EL treatment on GPx activity.	285
6c.18	Effect of EL treatment on Catalase activity.	285
