

LIST OF TABLE

Table 4.1	:	Educational profile by age of the women farmers
Table 4.2	:	Family characteristics of the women farmers
Table 4.3	:	Total yearly family income
Table 4.4	:	Occupational pattern of respondents' husbands
Table 4.5	:	Agriculture and livestock details
Table 4.6	:	Anthropometric characteristics of the women farmers
Table 4.7	:	Frequency of weeding per crop.
Table 4.8	:	Number of days after which weeding is performed in various winter vegetables
Table 4.9	:	Number of days after which weeding is performed in various summer vegetables
Table 4.10	:	Number of years of weeding operation
Table 4.11	:	Posture used by women while performing weeding operation
Table 4.12	:	Continuous weeding without taking rest
Table 4.13	:	Frequency of rest period
Table 4.14	:	Duration of rest period
Table 4.15	:	Number of hours in a day spent in weeding
Table 4.16	:	Help received by respondent in weeding
Table:4. 17	:	Total number of days spent on weeding in a year
Table 4.18	:	Total area weeded with traditional tools by women farmers in a day
Table 4.19	:	Frequency of falling ill according to the age of women farmers

Table 4.20	:	Type of weeding tool used according to the age of women farmers
Table 4.21	:	Extent of discomfort experienced by the women farmers in different body parts with traditional weeding tools
Table: 4.21	:	Coefficient of correlation between extent of body discomfort and selected personal, family and situational variables
Table 4.22	:	Age and physical characteristics of the women subjects
Table 4.23	:	Working heart rate (HR in beats/min) of women subjects during operation of different weeders
Table 4. 24	:	Increase in heart rate (Δ HR beats/min) of women subjects during operation of weeders
Table 4. 25	:	Area covered (output in m^2/h) by women subjects with different weeders
Table 4.26	:	Increase in heart beats per metre square of area weeded (beats/ m^2)
Table 4.27	:	Energy expenditure (kJ/min) while working with different weeders
Table 4.28	:	Per cent increase in energy expenditure while working with different weeders
Table 4.29	:	Total cardiac cost (beats/min) of weeding with different weeders
Table 4.30	:	Weeding efficiency with different weeders
Table 4.31	:	Reduction in grip strength (in %) of left hand (LH) after operation of different weeders
Table 4.32	:	Reduction in grip strength (in %) of the right hand (RH) after operation of weeders with different weeders

Table 4.33	:	Reduction in grip strength of both hands (in %) after operation of different weeders
Table 4. 34	:	Postural stress in terms of % deviation in the lower back
Table 4.35	:	Postural stress in terms of % deviation in the upper back
Table 4.36	:	Overall body discomfort felt on operation with different weeders
Table 4.37	:	Extent of discomfort felt in different body parts on operation with wheel hoe
Table 4.38	:	Extent of discomfort felt in different body parts on operation with draw weeder
Table 4. 39	:	Extent of discomfort felt in different body parts on operation with v-blade hoe
Table 4.40	:	Extent of discomfort felt in different body parts on operation with falcon hoe
Table 4. 41	:	Extent of discomfort felt in different body parts on operation with khutti
Table 4.42	:	Various dimensions of the CIA wheel hoe
Table 4.43	:	Various dimensions of draw weeder
Table 4.44	:	Various dimensions of v-blade hoe
Table 4.45	:	Various dimensions of falcon hoe
Table 4.46	:	Various dimensions of khutti
Table 4.47	:	F-ratio and critical difference for various parameters for ergonomical evaluation of weeders
