

LIST OF TABLES

Table No.	Title	
2.1	Summary of Investigations on Various Thermal Systems Using EGM	33
2.2	Summary of Investigations on Various Thermal Systems Using EDM	33
2.3	Comparison of the Exergy Analysis Methods	37
2.4	Summary of Investigations on Exergoeconomic Optimization Methods	55
2.5	Comparison of Various Exergoeconomic Optimization Methods	58
3.1	Steady State Online Data for Brine Chilling Unit	70
3.2	Additional Data for Brine Chilling Unit	71
3.3	Steady State Online Data for GT-HRSG	71
3.4	Additional Data for GT-HRSG	71
3.5	Steady State Online Data for Steam Power Plant	72
3.6	Additional Data for Steam Power Plant	73
4.1	Break down of TCI	81
5.1	Generated Data for AAVAR System	97
5.2	Generated Data for AAVAR System and Pre-coolers	99
5.3	State properties for AAVAR system	101
5.4	Definitions of Fuel Product Loss for components of AAVAR system	103
5.5	Exergetic Destruction, Loss and Efficiency Using EDM	105
5.6	Results of EGM Approach of Exergy Analysis	111
5.7	Estimation of Levelized O & M Cost	119
5.8	Unit Exergy Cost and Cost Flow Rate	126
5.9	Parameters of Exergoeconomic Evaluation	127
5.10	Generated Data through Investment Cost Equation for Generator	130
5.11	Generated Data through Investment Cost Equation for CE Assembly ($T_a = T_c = 36^{\circ}\text{C}$)	131
5.12	Generated Data through Investment Cost Equation for CE Assembly ($T_a = T_c = 38^{\circ}\text{C}$)	131
5.13	Generated Data through Investment Cost Equation for CE Assembly ($T_a = T_c = 40^{\circ}\text{C}$)	132
5.14	Generated Data through Investment Cost Equation for SHX	134

5.15	Generated Data through Investment Cost Equation for RHX 05	135
5.16	Generated Data through Investment Cost Equation for RHX 06	136
5.17	Generated Data through Investment Cost Equation for Pump & Motor	137
5.18	Generated Data through Investment Cost Equation for Absorber	138
5.19	Generated Data through Investment Cost equation for Pre-cooler-1	139
5.20	Generated Data through Investment Cost Equation for Pre-cooler-2	140
5.21	Constants of Investment Cost equation for Components of Brine Chilling Unit	141
5.22	Variables Obtained During the Optimization of AAVAR System	143
5.23	Effect of Effectiveness on Investment Cost for PC1	147
5.24	Effect of Effectiveness on Investment Cost for PC2	148
5.25	Comparison Between The Base Case and The Optimum Case	149
6.1	Molar Analysis of the Combustion Product	155
6.2	State Properties for Gas Turbine Power Plant	161
6.3	Component-wise Fuel, Product and Loss of GT-HRSG Power Plant	162
6.4	Exergy Analysis Result for Gas Power Plant	162
6.5	Estimation of Levelized O & M Cost for the Components of GT-HRSG	164
6.6	Unit Exergy Cost and Cost Flow Rate for Gas Power Plant	166
6.7	Results of Exergoeconomic Analysis for Gas Power Plant	167
6.8	Generated Data Using Investment Cost Equation for Air Compressor	168
6.9	Generated Data through Investment Cost Equation for Air Preheater	169
6.10	Generated Data through Investment Cost Equation for Combustion Chamber	170
6.11	Generated Data through Investment Cost Equation for Gas Turbine	172
6.12	Generated Data through Investment Cost Equation for HRSG	173
6.13	Values of B, n and m for Various Components of Gas Power Plant	174
6.14	Variables Obtained during Exergoeconomic Optimization of Gas Power plant	177
6.15	Comparison between base case and the optimum case for GT-HRSG	181
6.16	Analysis of the Coal Used	185
6.17	Analysis of Combustion Product	186

6.18	State Properties for Steam Power Plant	192
6.19	Fuel Product Loss Definition for Steam Power Plant	193
6.20	Exergy Analysis of Steam Power Plant	194
6.21	Unit Exergy Cost and Cost Flow Rate for Steam Power Plant	196
6.22	Results of Exergoeconomic Analysis of Steam Power Plant	197
6.23	Generated Data through Investment Cost Equation for Boiler	199
6.24	Generated Data through Investment Cost Equation for Steam Turbine	200
6.25	Values of B, n and m for Boiler and Steam Turbine	201
6.26	Variables Obtained During the Exergoeconomic Optimization of Steam Power Plant	204
6.27	Comparison Between Base Case and The Optimum Case for Steam Turbine Power Plant with Regeneration	206
6.28	Comparison of Heat sources	207
