

LIST OF TABLES

<u>TABLE</u>	<u>Page</u>
1.1 Per capita consumption of electricity and per capita gross national product - 1975	2
2.1 Financial result of the operation of MSEB and its predecessors	63
2.2 Number of villages and pumpsets electrified by the MSEB during 1960-61 and 1977-78.	68
2.3 Number of villages electrified and pumpsets connected in Poona Rural Division and Poona District (1956-57 to August 1965)	77
3.1 The sample-frame - classification of electrified villages according to their years of electrification and their location vis-a-vis taluka.	84
3.2 Distribution of sample number of villages selected from different cells of the table 3.1	86
3.3 Details of sample villages originally selected for field inquiry.	87
3.4 Diviation from the principle of probability proportional to size in the sample of selected villages due to substitution of villages	92
3.5 Distribution of electric motors in sample villages by lag in years from the dates of electrification of respective villages and size in terms of horse power	101
3.6 Village-wise Distribution of sample number of electric motors by the time lag in their connection from the respective dates of electrification of village and their sizes in terms of horse-power	106
3.7 Number of cultivators covered by the samples of modes of irrigation	112

<u>TABLE</u>	<u>Page</u>
3.8 Distribution of owner-cultivators of sample modes of irrigation by types of modes employed for irrigating their scatter of irrigated holdings.	116
3.9 Total number of wells in the selected villages and wells covered by the samples of modes of irrigation	118
4.1 Distribution of sample pump-sets by horse power and their year of connection in the respective villages	155
4.2 Distribution of total pumpsets by horse power in sample villages by their years of connection in the respective villages	157
4.3 Investment cost of sample motors - 3 H.P.	167
4.4 Investment cost of sample motors - 5 H.P.	167
4.5 Average life and investment costs of pump-houses constructed on motors in the sample	173
4.6 Source of finance for pumpsets in the sample.	175
4.7 Details of source of finance in respect of motors financed partly out of owned funds and partly out of borrowed funds	176
4.8 Age-wise distribution of pumpsets, average investment by category of finance and interest cost : 5 H.P. electric motor	183
4.9 Age-wise distribution of pumpsets, average investments costs by category of finance, and interest costs: 3 H.P. electric motor	184
4.10 Contribution (in percentage terms) of interest costs in fixed costs and total costs of operation of motors of 5 H.P.	186
4.11 Contribution (in percentage terms) of interest costs in fixed costs and total costs of operation of electric motors of 3 H.P.	187

<u>TABLE</u>	<u>PAGE</u>
4.12 Ownership rights of respondents in sample motors	189
4.13 Comparison of amounts billed for a hypothetical case - two motors with identical consumption but with different number of meter-readings over a period of 2 months	196
4.14 Per hour maintenance and operation cost of electric motors of 3 HP	204
4.15 Per hour maintenance and operation cost of electric motors of 5 HP	205
4.16 Cost of Irrigation by electric motors : 3 HP	207
4.17 Cost of irrigation by electric motors : 5 HP	208
5.1 Initial investment in oil engines	222
5.2 Details of second-hand engines in the sample	232
5.3 Expectation of life of the pipes according to the year of purchase and the price paid	236
5.4 Investment costs of pumpsheds and their expected lives	238
5.5 Distribution of engines by age and source of finance	241
5.6 Age of engines and interest costs per engine by category of finance	243
5.7 Age of engines and proportion of interest cost per engine to their average fixed and total costs by category of finance	244
5.8 Hourly rate of consumption of fuels (diesel and crude oil) used by sample engines.	247
5.9 Expenditure on greasing of oil engines and pumps. Oil engines classified according to their levels of operation	251
5.10 Impact of type of lubricating oil and fuel used by oil engines on their maintenance cost	259
5.11 Age of the engines and their maintenance cost	260

<u>TABLE</u>	<u>Page</u>
5.12 Per hour cost of working of oil engines of 5 HP	265
5.13 Cost of irrigation by oil engines- 5 HP	266
6.1 Distribution of sample of bullock-operated lifts.	287
6.2 Distribution of cultivators by ownership of bullocks and the bullock-pair hours operated for irrigation purposes.	290
6.3 Distribution of cultivators by bullock-holding and cultivated holding	292
6.4 Distribution of cultivators by the reported costs and life of wooden structure	293
6.5 Distribution of leather mhots by their economic life and their extent of use	297
6.6 Investment and operation cost of mhots of 2 types - leather and tin mhots.	298
6.7 Distribution of cultivators according to reported cost of accessories and different levels of utilisation	301
6.8 Distribution of cultivators according to cost of wooden accessories and levels of utilisation of lift	303
6.9 Distribution of bullocks according to their value on date and expectancy of life	308
6.10 Distribution of cultivators by size of their bullock holding and expenditure incurred per bullock on fodder and concentrates	311
6.11 Costs of irrigation by bullock-lift	314
7.1 Details of sample modes considered for comparison of hours of operation	315
7.2 Comparative positions of initial investment costs - 3 HP and 5 HP motors and 5 HP oil engine : 1964-65 and 1979-80	338
7.3 Variations in operation costs of electric motors and oil engines during 1965-66 and 1979-80	341

<u>TABLE</u>	<u>Page</u>
8.1 Distribution of cultivators by ownership pattern of modes of irrigation	350
8.2 General socio-economic characteristics of cultivators owning and not-owning mechanised type of mode	355
8.3 Distribution of cultivators owning and not owning mechanised type of mode on cultivated holding, level of education and income from subsidiary occupation	358
8.4 Distribution of cultivators owning and not-owning mechanised type of lift on cultivated holding and acreage per family member working on farm	361
8.5 Distributions of wells (fitted with mechanised and non-mechanised) modes of cultivators owning mechanised or non-mechanised mode of irrigation on the basis of 'ownership right' in the well and 'net area' under the command of well	372
8.6 Percentage of mechanised wells to total wells by ownership rights and net area under the command of wells	374
8.7 Proportion of wells covered by electric motor to the wells covered by oil engines in different size-groups of ownership rights and net area commanded by wells	377
8.8 Distribution of ownership of sample number of oil engines by the cultivators classified on the basis of types of mode owned by them.	391
8.9 Distribution of cultivators owning sample oil engines on the response to the query of switching over to electricity and the number of sample oil engines likely to be replaced in the event of their switch over.	393
8.10 Distribution of cultivators and number of oil engines covered by reasons for not shifting to electricity	394
8.11 Details of employment of mobile engines not likely to be replaced by electricity	398

<u>TABLE</u>	<u>Page</u>
8.12 Village-wise distribution of engines-installed before and after electrification of the village classified under the heads 'likely to be retained' and 'likely to be replaced'	404
8.13 Distribution of pumpsets connected in the sample villages by the time-lag in their connection on completion of scheme	417
8.14 Distribution of sample number of pumpsets on time-lag in connection and the type of ownership	428
8.15 Distribution of sample number of pumpsets on time-lag in connection and the type of mode previously operated to the operation of electric motor	431
8.16 Distribution of sample number of pumpsets on time-lag in connection and the source of finance for motors	433
8.17 Comparative distribution of irrigated holding of cultivators reporting 'delay' and not reporting 'delay' in switching over to electricity	437
