

CONTENTS

	Page No
1. Chapter 1: Introduction	1
2. Chapter 2: Study area	7
2.1. Geographic location	
2.2. Geology	
2.3. Geomorphology	
2.4. Climate	
2.4.1. Rainfall	
2.4.2. Temperature	
2.4.3. Wind	
2.5. Tides	
2.6. Currents	
2.7. Drainage	
2.8. Coastal population and socio-economic profile	
2.9. Ports in Gujarat	
2.10. Diversity in the Gulf of Kachchh	
2.11. The Marine National Park and Sanctuary	
3. Chapter 3: Remote Sensing	19
3.1. Introduction	
3.2. Remote sensing of vegetation	
3.3. Spectral characteristics of vegetation	
4. Chapter 4: Mangrove Vegetation	35
4.1. Definition	
4.2. Diversity in Mangroves	
4.3. Factors affecting the Mangrove Environment	
4.3.1. Climate	
4.3.2. Geomorphology	
4.3.3. Tides	
4.3.4. Waves and Currents	
4.3.5. Salinity	
4.4. Global Distribution of Mangroves	
4.5. Mangrove Distribution in India	
4.6. Mangroves in Gujarat	
5. Chapter 5. Remote sensing of mangroves	53
5.1. Resource inventory and mapping- Global scenario	
5.2. Resource inventory and mapping – Indian scenario	
6. Chapter 6: Material and methods	63
6.1. Mangrove community zonation	
6.1.1. Satellite data	
6.1.2. Software and hardware used	
6.1.3. Classification system	
6.1.4. Pre-classification steps	
6.1.4.1. Geometric correction	
6.1.4.2. Radiometric correction	

6.1.4.2.1.	Radiance conversion	
6.1.4.2.2.	Apparent reflectance conversion	
6.1.5.	Image analysis and Classification steps	
6.1.5.1.	Unsupervised classification	
6.1.5.2.	Image analysis	
6.1.5.3.	Supervised classification	
6.1.5.3.1.	Mangrove habitat Mapping	
6.1.5.3.2.	Mangrove community Zonation	
6.1.6.	Post classification steps	
6.1.6.1.	Area estimation	
6.1.6.2.	Accuracy assessment	
6.2.	Field data collection	
6.2.1.	Identifying training sites	
6.2.2.	Diversity survey	
6.2.3.	Phytosociological data collection	
6.2.4.	Field survey for accuracy assessment	
6.3.	Spectral studies for dominant mangrove communities	
6.4.	Change detection studies	
6.4.1.	Thematic data used	
6.4.2.	Geometric correction	
6.4.3.	Legend standardization	
6.4.4.	Change detection analysis	
6.4.4.1.	Merging of vector layers	
6.4.4.2.	Dissolving polygons of very small size.	
6.4.4.3.	Identification of Change Categories	
6.4.5.	Defining output legend (Map composition)	
7.	<i>Chapter 7: Spectral behaviour of dominant mangrove communities</i>	90
7.1.	Mangrove Species radiometry	
7.2.	Characteristics of mangroves of the study area	
7.3.	Spectral radiance values of major mangrove communities	
8.	<i>Chapter 8: Mangrove Habitat and Community Zonation</i>	97
8.1.	Mangrove Habitat Mapping	
8.1.1.	Selection of proper methodology for Mangrove Habitat Generation	
8.1.2.	Mangrove Habitat Maps and its accuracy	
8.1.3.	Area Statistics	
8.2.	Mangrove Community Mapping	
8.2.1.	Mangrove Communities of the study area	
8.2.2.	The Mangrove Community Zonation Map & its accuracy	
8.2.3.	Area statistics	
8.2.4.	Mangrove community distribution over different regions	
9.	<i>Chapter 9: Floral diversity of the study area and the phytosociological status of mangroves</i>	115
9.1.	Floral diversity	
9.1.1.	True mangroves	
9.1.1.1.	Avicennia	
9.1.1.2.	Ceriops	
9.1.1.3.	Rhizophora	

9.1.1.4. Aegiceras	
9.1.2. Mangrove Associates and salt marsh plants	
9.1.3. Vegetation on Sand	
9.1.4. Island Vegetation	
9.2. Phytosociology of the true mangroves	
9.2.1. Species diversity and distribution in the area	
9.2.2. Height	
9.2.3. Density	
10. Chapter 10: Long term Mangrove Habitat monitoring	130
10.1. Mangrove vegetation change- Maps	
10.2. Mangrove vegetation change- Statistics	
10.3. Major factors affecting the mangroves of the area	
10.3.1. Factors causing improvement in the mangrove area	
10.3.1.1. Natural regeneration	
10.3.1.2. Plantation by the forest department	
10.3.2. Factors causing degradation in mangrove area	
10.3.2.1. Impact of cyclones	
10.3.2.2. Sand movement	
10.3.2.3. Anthropogenic pressure	
10.4. Discussion	
11. Chapter 11: Conclusions	145
12. Bibliography	148
