	List of contents	
Chapter 1	Review of Literature and Introduction	
	Introduction	1
1.1	Rhizobium : The Wonder Microbe	1
1.1.1	General Taxonomy	2
1.1.2	Host Specificity and Nodulation	2
1.1.3	Rhizobium as nitrogen-fixer	6
1.1.4	Plant Growth Promoting Rhizobzcteria (PGPR)	8
1.1.4.1	Rhizobium as PGPR for non-legumes.	9
1.1.5	Effect of P on nodulation	10
1.1.6	Phosphorus deficiency and Nitrogen fixation	12
1.1.7	Rhizobium- PSM co-inoculation	12
1.1.8	Phosphate solubilization by <i>Rhizobium</i> spp.	20
1.1.9	Phosphorus in agriculture	21
1.2	Glucose metabolism in Various Organisms.	27
1.2.1	Glucose catabolic pathways in pseudomonads	27

1.2.2	Glucose Metabolism in Bacillus subtilis	29
1.2.3	Glucose Metabolism in Rhizobium	29
1.2.4	Direct oxidative pathway.	31
1.2.4.1	Gluconic and 2-ketogluconic acid secretion.	31
1.2.4.2	Importance of Pyrroloquinoline quinone in abiotic stress.	33
1.2.5	Rationale of Study	38
Chapter 2	Materials and Methods	
2.1	Bacterial strains / Plasmids	43
2.1.1	pUCPM18	47
2.1.2	pBBR1MCS-2	47
2.2	Media and Culture conditions	47
2.2.1	M9 minimal medium	48
2.2.2	TrisCl buffered medium	49
2.2.3	Pikovskaya's (PVK) Agar	49
2.2.4	Murashige-Skoog's Medium	49
2.2.5	YEMA medium for Rhizobium strains	50

2.3	Molecular biology tools and techniques	50
2.3.1	Isolation of plasmid and genomic DNA	50
2.3.1.1	Plasmid DNA isolation from <i>E. coli</i> and <i>Rhizobium</i> strains.	50
2.3.1.2	Genomic DNA from <i>Rhizobium</i> strains.	50
2.3.2	Transformation of plasmid DNA	51
2.3.2.1	Transformation of plasmid DNA in <i>E. coli</i>	51
2.3.2.2	Electroporation of plasmid DNA in <i>Rhizobium</i> strains.	51
2.3.3	Agarose gel electrophoresis	51
2.3.4	Restriction enzyme digestion analysis	52
2.3.5	Gel elution and purification	52
2.3.6	Ligation	52
2.3.7	Polymerase Chain Reaction (PCR)	53
2.3.8	Genomic Integration	54
2.4	P-solubilization phenotype	54
2.5	Physiological experiments	55

,

2.5.1	Inoculum preparation	55
2.5.2	Growth characteristics and pH profile	55
2.6	Estimation of Plant growth promoting factors	55
2.6.1	Culture conditions for EPS production and quantification	55
2.6.2	Biofilm assay	56
2.6.3	Indole acetic acid (IAA) production and estimation	56
2.7	PQQ determination	57
2.8	Analytical techniques	57
2.9	Enzyme assays	59
2.9.1	Preparation of cells and cell free extracts	59
2.9.2	Enzyme Assay Protocols	60
2.9.2.1	GDH (1.1.99.17) assay	60
2.9.2.2	Gluconate dehydrogenase assay (GADH) (1.1.99.3)	61
2.10	Pot experiments - Interaction with (Mung bean).	61
2.10.1	Plant Inoculation Experiments:	62
2.10.2	Acetylene Reduction Assay (ARA): Measuring Nitrogenase Activity	62
2.10.3	. Chlorophyll Content:	62
2.10.4.1	Antioxidant Enzymes / ROS scavenging enzyme activity:	62

2.10.4.2	Estimation of Water Soluble Protein Content	65
Chapter 3	Determining the MPS ability of <i>Rhizobium</i> strains by	
	incorporating pqqE gene and Acinetobacter calcoaceticus pqq	
	gene cluster	
3.1	Introduction:	66
3.1.1	Rational of study	68
3.2	EXPERIMENTAL DESIGN	69
3.2.1	Bacterial strains used in this study	69
3.2.2	Development of <i>B. japonicum</i> , <i>M. loti</i> and <i>S. fredii</i> strains harboring	71
	<i>E. herbicola pqq E</i> gene (pJNK1) and <i>A. calcoaceticus pqq</i> gene	
	cluster (pJNK5)	
3.2.3	Growth and MPS phenotype of transformant strains of <i>Rhizobium</i>	71
3.2.4	Effect of heterologous E. herbicola pqq E gene (pJNK1) and A.	72
	calcoaceticus pqq gene cluster (pJNK5) overexpression on the	
	physiology and glucose metabolism.	
3.3	Results:	72
3.3.1	Heterologous overexpression of <i>E. herbicola pqq E</i> gene (pJNK1)	72
	and A. calcoaceticus pqq gene cluster (pJNK5) in Rhizobium	
	strains	
3.3.2	Effect of overexpression of <i>E. herbicola pqqE</i> and <i>A. calcoaceticus</i>	73
	pqq gene cluster (pJNK5) on GDH activity in B. japonicum, M. loti	

	and S. fredii NGR 234	
3.3.3	Growth and MPS ability of <i>Rhizobium</i> transformant of <i>pqq E</i> and <i>pqq</i>	75
	cluster genes.	
3.3.3	Effect of E. herbicola pqq E gene (pJNK1) and A. calcoaceticus pqq	77
	gene cluster (pJNK5) overexpression on growth pattern and pH	
	profile in presence of 50mM glucose concentration.	
3.3.4	Physiological effects of A. calcoaceticus pgg gene cluster	79
3.3.5	P solubilization and organic acid secretion in 100mM Tris-Cl Buffer	81
	pH 8 and 50mM Glucose containing Rock Phosphate 1mg/ml	
3.3.6	Effect of <i>E. herbicola pag E</i> gene (pJNK1) and <i>A. calcoaceticus pag</i>	82
	gene cluster (pJNK5) overexpression on POO secretion in <i>Rhizobium</i>	
	transformants	
3.3.7	Effect of A. calcoaceticus pqq gene cluster (pJNK5) overexpression	85
	on Biofilm, EPS and IAA secretion in <i>Rhizobium</i> transformants	
3.3.8	Discussion	85
Chapter 4:	Determining the MPS ability of <i>Rhizobium</i> strains containing	
	A. calcoaceticus pqq cluster and P. putida gad operon	
4.1	Introduction	90
4.2	EXPERIMENTAL DESIGN	91
4.2.1	Bacterial strains used in this study	92
4.2.2	Development of B. japonicum, M. loti and S. fredii strains harboring	92
	A. calcoaceticus pqq gene cluster and P. putida gad operon (pJNK6).	
4.2.3	Growth and MPS phenotype of pJNK6 transformant strains of	92

	Rhizobium	
4.2.3	Growth and MPS phenotype of pJNK6 transformant strains of <i>Rhizobium</i>	92
4.3	Results	93
4.3.1	Heterologous overexpression of A. calcoaceticus pqq gene clusterandP. putida gad operon (pJNK6) in Rhizobium strains.	93
4.3.2	Effect of heterologous overexpression of <i>A. calcoaceticus pqq</i> gene cluster and <i>P. putida gad</i> operon (pJNK6) in <i>Rhizobium</i> strains on GADH and GDH activity in <i>B. japonicum</i> , <i>M. loti and S. fredii</i> NGR 234	93
4.3.3	Growth and MPS ability of <i>Rhizobium</i> transformants of <i>A</i> . <i>calcoaceticus pqq</i> gene cluster and <i>P. putida gad</i> operon (pJNK6)	94
4.3.4:	Effect of <i>A. calcoaceticus pqq</i> gene cluster and <i>P. putida gad</i> operon (pJNK6) overexpression on growth pattern pH profile and physiological effects in presence of 50mM glucose concentration	96
4.3.5	P solubilization and organic acid secretion in 100mM Tris-Cl Buffer pH 8 and 50mM Glucose containing Rock Phosphate 1mg/ml.	99
4.3.6	Effect of <i>A. calcoaceticus pqq</i> gene cluster and <i>P. putida gad</i> operon (pJNK6) overexpression on Biofilm, EPS and IAA secretion in <i>Rhizobium</i> transformants.	102
4.3.7	Discussion	104
Chapter 5	Genomic integration of A. calcoaceticus pqq cluster and P. putida gad operon with vgb, egfp in B. japonicum M. loti and S.fredii	

Chapter 6	Genomic integration of A. calcoaceticus pqq cluster and P. putida	
	DISCUSSION	
5.4	DISCUSSION	123
	containing rock phosphate	
5.3.6	P solubilization and organic acid by <i>B. japonicum</i> , <i>M. loti</i> and <i>S.</i>	120
526	pH 8 and 50 mM glucose containing rock phosphate	120
5.3.5	Physiological effect of genomic integration on 50 mM Tris-Cl buffer	119
	containing rock phosphate	
5.3.4	Growth pattern and pH profile of <i>B. japonicum</i> , <i>M. loti</i> and <i>S. fredii</i>	117
	containing rock phosphate	
	integrant on 50 mM Tris-Cl buffer pH 8 and 50 mM glucose	
5.3.3	Growth and MPS ability of <i>B. japonicum, M. loti</i> and <i>S. fredii</i>	115
	integrants.	
5.3.2	GDH and GADH activity of <i>B. japonicum</i> , <i>M. loti</i> and <i>S. fredii</i>	114
5.5.1	fredii	112
531	Construction of Genome integrants of <i>B</i> ignoricum <i>M</i> loti and <i>S</i>	112
5.3	Results.	112
5.2.2	Cloning of pqq- gad operon in integration vector.	111
5.2.1	Bacterial strains used in this study	111
5.2	Experimental design	111
