

ACKNOWLEDGEMENTS

The author is highly indebted to Professor S.S. Merh, Head of the Department of Geology, M.S. University of Baroda for guiding and supervising this investigation. But for his encouragement and all round guidance, the author would not have been able to write this doctoral dissertation. The concepts developed in this thesis are the outcome of constant and stimulating exchange of views with him on various aspects of geomorphology and neotectonism.

The author owes a special gratitude to Shri S.D. Desai, Reader in Geology, for inspiration and encouragement to carry out the research work.

Special thanks are due to Shri Laxmanrao R. Gcharge, Tahsildar, Kurla, Bombay and Shri Prataprao K. Gcharge, Circle Officer, Mhasvad (Satara) for their manyfold assistance including financial support.

The author shall ever remain grateful to his wife Sau. Neelima without whose patient and devoted co-operation, assistance and domestic adjustments during the course of this study, this thesis could not have been completed.

Thanks are also due to Dr. S.J. Desai, Reader in Geology, for critically going through the manuscript, and Dr. M.P. Patel for technical help during preparation of this thesis. Shri D.M. Shringarpure is also thankfully acknowledged for his help in the laboratory and field.

The author is also indebted to Dr. R.A. Chansarkar, Dy. Director, F.E. Cell, Eng. R & D Orgn., Ministry of Defence, New Delhi, for providing guidelines and other help in the terrain evaluation studies. Financial support in the form of Sr. Research Fellowship is also gratefully acknowledged.

The author is thankful to Shri B.M. Chauhan, Photographer of the Geology Department for doing excellent job of photography and Shri S.P. Dalvi and Shri A.M. Pethe for preliminary and final typing of this thesis.

Help from the teaching staff, research scholars and administrative staff of the Geology Department is also thankfully acknowledged, who assisted the author during preparation of this thesis in many ways.
