	<u>Page</u>
<u>Chapter I : INTRODUCTION</u>	1
General	1
Location	2
Physiography and Drainage	3
Climate and Rainfall	5
Vegetation	6
Wild animals	8
Population and habitation	8
Communication and transport	8
Purpose and scope of investigations	9
✓ Brief Geology	12
 <u>Chapter II : BACKGROUND INFORMATION</u>	 15
 <u>Chapter III : DISTRIBUTION AND FIELD CHARACTERS</u>	 34
✓ Succession	36
Basement gneisses	38
Lower Champaners	40
Basal Conglomeratic Quartzites	40
Chhota Udepur Dolomites	43
Gandhra Pelitic Group	43
Middle Champaners	65
Narukot Quartzites	66
Jaban Slates	74
Jaban Conglomeratic Graywackes	79
Bhat Slates	91

Shivarajpur Quartzites and Phyllites	92
Bamankua Limestones	96
Upper Champaners	97
Rajgad Slates	97
Intrusive granites	99
Bhamaria Sandstones	101
 <u>Chapter IV : PETROGRAPHY</u>	 102
Basement Gneisses	104
Basal Conglomeratic Quartzites	105
Chhota Udepur Dolomites	106
Dolomites	106
Quartzites	106
Gandhra Pelitic Group	107
Lower Schists, etc.	107
Phyllites	107
Chlorite-muscovite-schists	107
Hornfelses	107
Gneisses	113
Poyelli Quartzites	126
Upper Slates and Phyllites	127
Ghandra Dolomites	132
Dolomites	133
Skarn and associated reaction rocks	134
Narukot Quartzites	140
Pebbly variety	141
Non-pebbly variety	142
Grain size study of the non-pebbly argillaceous quartzites	143

✓ Jaban Slates	153
Slates and slaty-phyllites	153
Argillites	156
Hornfels	157
✓ Jaban Conglomeratic Graywackes	158
Graywackes	158
Protoquartzites	162
✓ Bhat Slates	164
✓ Shivarajpur Quartzites and Phyllites	165
Quartzites	165
Phyllites	165
Limestones	165
Bamankua Limestones	166
Rajgad Slates	166
Granitic Rocks	167
Potash-granites	168
Trondhjemites	170
 <u>Chapter V : STRATIGRAPHY AND SEDIMENTATION</u>	 172
Early Stages of Geosynclinal Cycle	176
Orthoquartzite-Carbonate Association (Chhota Udepur Dolomites)	176
Black Shale Facies (Gandhra Pelitic Group)	178
Middle Stages of Geosynclinal Cycle	182
Blanket Sand Association (Narukot Quartzites)	182
Interpretation from statistical parameters	186
Black Shale Facies of Marginal Basin Association (Jaban Slates)	187

✓ Graywacke Suite (Jaban Conglomeratic Graywackes)	189
✓ Bhat Slates	199
✓ Shivarajpur Quartzites and Phyllites	200
✓ Bamankua Limestones	202
Late Stage of Geosynclinal Cycle	202
Rajgad Slates	202
Summary of the events of Geosynclinal Cycle	203
 <u>Chapter VI : STRUCTURE</u>	 208
Champaner Folding	209
Regional pattern	209
Geometry and mechanism of folding	210
Lineations related to folding	212
Fracture pattern related to folding	214
Deformational Structures due to the Granite Intrusion	217
Deflection of trends, stretching and boudinaging	218
Superimposition of N-S flexures and formation of Narukot dome structure	219
Tightening of the earlier minor folds and steepening of their axes	219
Radial faulting	220
 <u>Chapter VII : METAMORPHISM</u>	 224
Regional Metamorphism	225
Mineral assemblages	226
Chlorite-schists associated with Upper Gandhra Slates	228

Presence of stilpnomelane in Gandhra and Jaban Slates	229
Talc-dolomite assemblage of Gandhra Pelitic Group	230
Calc-schists of Undhania	232
Contact Metamorphism	233
An outer transition zone of spotted phyllites	234
An intermediate zone of andalusite	234
An inner zone of cordierite	234
Contact Migmatiation	236
Interesting features of migmatiation	237
Field characters	237
Microscopic characters	244
Chemical characters	246
Skarns and associated reaction rocks	250
 <u>Chapter VIII : CORRELATION</u>	 252
Champaner Series - A typical mio-geosyncline	255
Structural and metamorphic differences between Aravallis and Champaners	256
Champaner Series in relation to the surrounding granites and gneisses	257
Pre-Champaner gneissic basement	258
Post-Champaner granites and gneisses	258

<u>Chapter IX : SUMMARY</u>	260
Stratigraphy	260
Sedimentation	261
Structure	263
Metamorphism	265
Correlation	266
 ACKNOWLEDGEMENT	 268
 REFERENCES	 269
