

Table of Contents

1. Introduction	1
1.1 Background	1
1.2 AOPs for the removal of aqueous PhCs.....	5
1.3 Electrochemical oxidation (EO) for the removal of aqueous PhCs.....	5
1.4 Peroxymonosulfate (PMS) based processes.....	7
1.5 Need of the study	8
1.6 Aim and objectives of the study.....	9
2. Literature review	10
2.1 Literature related to electrochemical oxidation of PhCs.....	10
2.2 Literature related to peroxymonosulfate based processes for removal of PhCs	19
3. Materials and methodology	28
3.1 Materials	28
3.2 Reactor configurations and experimental set-up	29
3.3 Analytical procedure	34
3.4 Quenching experiments for EO sample analysis.....	36
3.5 Phytotoxicity testing	36
3.6 Response surface methodology	37
4. Results and discussion	38
4.1 Electrochemical oxidation of DCF	38
4.2 Effect of quenching agents on EO of DCF	40
4.3 Effect of the applied current density and reaction kinetics.....	45
4.4 Effect of electrolyte composition: sulfate to chloride ratio.....	46

4.5	<i>Effect of electrode material on EO of DCF</i>	51
4.6	<i>Phytotoxicity study</i>	53
4.7	<i>Comparative study of EC alone, PMS alone, EC/PMS, and Fe₂SO₄/PMS for IBU removal</i> 54	
4.8	<i>Contribution of reactive radical species in IBU removal using EC/PMS</i>	57
4.9	<i>Results of response surface methodology</i>	58
4.10	<i>Performance in continuous flow mode</i>	67
4.11	<i>Results of LC-MS analysis</i>	71
5.	Conclusions	73
5.1	<i>Conclusions: EO study for DCF removal</i>	73
5.2	<i>Conclusions: EC/PMS study for IBU removal</i>	74
	References.....	75
	Publications.....	92
	Conferences.....	93
	APPENDIX A: Effect of sample to methanol ratio on diclofenac and its intermediates	i
	APPENDIX B: Quenching with NaOH to Alkaline pH (pH>10)	i
	APPENDIX C: DCF Calibration graph	ii
	APPENDIX D: HPLC chromatograms for time points 0, 10, 25, 40, 60 min, dotted line represents result after quenching and solid black line represents immediate result without quenching.....	iii
	APPENDIX E: Correlation test and Paired t-test between various data groups.....	vii
	APPENDIX F: Effect of pH on IBU time course profile for various combinations of current densities and [PMS] ₀ . Experimental conditions: ROC, [IBU] ₀ = 10 mg/L.	ix

APPENDIX G: Effect of $[PMS]_0$ on IBU time course profile for various combinations of current densities and pH. Experimental conditions: ROC, $[IBU]_0 = 10 \text{ mg/L}$	x
APPENDIX H: Effect of current densities on IBU time course profile for various combinations of $[PMS]_0$ and pH. Experimental conditions: ROC, $[IBU]_0 = 10 \text{ mg/L}$	xi
APPENDIX I: Effect of current densities and $[PMS]_0$ on % IBU removal in 30 minutes. Experimental conditions: ROC, $[IBU]_0 = 10 \text{ mg/L}$, Initial pH=7.5.	xii
APPENDIX J: Effect of $[PMS]_0$ to current density ratio on % IBU removal and IBU removal rate constant.	xii
