CHAPTER 1. INTRODUCTION AND REVIEW OF LITERATURE		
1.1	World TFR 1950-2010	3
1.2	World TFR-2020	3
1.3	Trends in TFR by region, 1950-2050	4
1.4	Indian TFR	4
1.5	Prevalence of primary infertility among currently married women in India,NFHS I –IV	5
1.6	Causes of female infertility	8
1.7	Endocrine glands that participate in female fertility	9
1.8	Hypothalamus-Pituitary-Thyroid [HPT] axis	10
1.9	Thyroid Hormone Actions	10
1.10	Different thyroid conditions	11
1.11	Hypothalamus Pituitary Ovarian-HPO Axis	18
1.12	Regulation of reproductive hormones	19
1.13	Levels of reproductive hormones during the female sexual cycle	20
1.14	Mechanism for increased LDL in hypothyroidism	24
1.15	Possible mechanisms of action of PCBs on the hypothalamic–pituitary–thyroid axis	26
1.16	Intracellular Signaling pathways following activation of cyclase	28
1.17	Hypothetical mechanisms linking PDE8B to serum TSH levels	29
CHAPTER 2. AIM AND HYPOTHESIS		
2.1	Cross talk between HPT & HPO axis in Euthyroid condition	48
2.2	Cross talk between HPT & HPO axis in Clinical/Overt Hypothyroidism	49
2.3	Cross talk between HPT & HPO axis in Subclinical Hypothyroidism	50
2.4	Hypothesis of the study	51
CHAPTER 3. SCREENING OF INFERTILE FEMALE POPULATION FOR THE PREVALENCE OF SUBCLINICAL HYPOTHYROIDISM (SCH). AND TO STUDY THE PREVALENCE, INVOLVEMENT AND THE CORRELATION OF AUTOIMMUNE THYROID DISEASE (AITD) WITH SCH IN PRIMARILY INFERTILE FEMALE POPULATION FROM GUJARAT		
3.1	The workflow to identify infertile women with thyroid problems	60
3.2	Strategies for Screening and Management of IF-SCH	64
3.3	Screening of SCH	66
3.4	Demographic factors (cofounding variables) in Control and IF-SCH females	67
3.5	IF-SCH subjects groups	69

3.6	Figure 2.6 Prevalence of infertility in different age groups of IF-SCH subjects:	69
3.7	Duration of infertility in years of IF SCH subjects	70
3.8	Pattern of correlation between TSH and Age in Control and IF-SCH subjects	70
3.9	Pattern of correlation between TSH and BMI in Control and IF-SCH subjects	71
3.10	Pattern of correlation between TSH and Hb in Control and IF-SCH subjects	72
3.11	TSH levels in the study population	73
3.12	Prevalence rate of AITD (Anti-TPO antibodies)	73
3.13	TSH levels	75
3.14	Anti-TPO Abs prevalence in Control, IF-SCH and IF-ET subjects	75
3.15	Pattern of Correlation between TSH and ft3 levels: A. Control subjects B. IF-SCH subjects	76
3.16	Pattern of Correlation between TSH and ft4 levels: A. Control subjects. B. IF-SCH subjects	77
3.17	Pattern of Correlation between TSH levels and positive Anti-TPO Abs: A. Control subjects. B. IF-ET subjects. C. IF-SCH subjects	78
CHAPTER 4. EVALUATING THE EFFECTS OF SCH ON THE FEMALE REPRODUCTIVE HORMONES AND TO FIND OUT THE PREVALENCE OF HYPERPROLACTINEMIA IN GUJARAT INFERTILE FEMALE POPULATION, AND TO STUDY THE CORRELATION OF SCH WITH ALTERED REPRODUCTIVE HORMONAL PROFILE		
4.1	PRL levels in Control, IF-SCH and IF-ET subjects	104
4.2	Gonadotropin levels in Control and IF-SCH subjects	105
4.3	Prevalence of hyperprolactinemia in the study population	106
4.4	Prevalence of Menstrual irregularities in Control, IF-ET and IF-SCH subjects	107
4.5	Menstrual status Control, IF-ET and IF-SCH subjects	109
4.6	PRL and TSH correlation patterns in Control, IF-ET and IF-SCH subjects	110
4.7	PRL and ft3 correlation in Control and IF-SCH subjects	111
4.8	PRL and ft4 correlation in Control and IF-SCH subjects	111
4.9	PRL and Age correlation in Control, IF-ET and IF-SCH subjects	112
4.10	PRL and BMI correlation in Control and IF-SCH subjects	113
4.11	LH and TSH correlation in Control subjects and IF-SCH subjects	114
4.12	LH and Age correlation in Control and IF-SCH subjects	115
4.13	LH and BMI correlation in Control and IF-SCH subjects	115

4.14	FSH and TSH correlation in Control and IF-SCH subjects	116
4.15	FSH and Age correlation in Control and IF-SCH subjects	117
4.16	FSH and BMI correlation in Control and IF-SCH subjects	117
4.17	LH and FSH correlation in Control and IF-SCH subjects	118
4.18	PRL and LH correlation in Control subjects and IF-SCH subjects	119
4.19	PRL and FSH correlation in Control and IF-SCH subjects	119
CHAPTER 5. TO ESTIMATE AND EXPLORE THE EFFECT OF SCH ON OXIDATIVE STRESS LEVELS AND LIPID PROFILE, AND TO FIND OUT THE CORRELATION OF SCH WITH THE OXIDATIVE STRESS LEVELS ALONG WITH ALTERATIONS IN THE LIPID PROFILE IN PRIMARILY INFERTILE FEMALE POPULATION OF GUJARAT		
5.1	Levels of oxidative stress biomarkers in Control and IF-SCH subjects	139
5.2	Correlation patterns between TSH and MDA levels: A. Control subjects	141
5.3	Correlation patterns between TSH and SOD levels	141
5.4	Correlation patterns between TSH and CAT levels	142
5.5	Correlation pattern between MDA and SOD levels	143
5.6	Correlation pattern between MDA and CAT levels	143
5.7	Correlation pattern between SOD and CAT levels	144
5.8	Lipid profile alterations in Control and IF-SCH subjects	145
5.9	Correlation patterns between TSH and TC levels	147
5.10	Correlation patterns between TSH and TG levels	147
5.11	Correlation patterns between TSH and LDL-C levels	148
5.12	Correlation patterns between TSH and HDL-C levels	148
5.13	Correlation patterns between MDA and TC levels	150
5.14	Correlation patterns between MDA and TG levels: A. Control subjects. B. IF-SCH Subjects	150
5.15	Correlation patterns between MDA and LDL-C levels	151
5.16	Correlation patterns between MDA and HDL-C levels	152
CHAPTER 6. ESTIMATING THE LEVELS OF POLYCHLORINATED BIPHENYLS (PCBS) AND EVALUATING THE CORRELATION BETWEEN PCBS AND THE CAUSE OF SCH IN GUJARAT INFERTILE FEMALE POPULATION		
6.1	Possible steps where environmental chemicals disrupt the hypothalamic–pituitary–thyroid axis	161
6.2	Chemical structure	162

6.3	Sources of PCBs in the environment	163
6.4	Strategy for PCB extraction and detection	165
6.5	Protocol for PCBs extraction and detection	166
6.6	PCBs standard consisting of PCBs congeners	167
6.7	Peaks of PCBs Congeners obtained in a sample of IF-SCH subject	168
6.8	Effects of PCBs at various levels of thyroid metabolism	171
CHAPTER 7. TO EVALUATE THE PREVALENCE AND ASSOCIATION OF PDE8B POLYMORPHISMS WITH SUBCLINICAL HYPOTHYROIDISM AND FEMALE INFERTILITY AND TO STUDY THE POSSIBLE GENOTYPE-PHENOTYPE CORRELATION WITH THE CAUSE OF SCH AND INFERTILITY IN GUJARAT INFERTILE FEMALE POPULATION		
7.1	The intracellular Signaling pathways following activation of cyclases:	183
7.2	Representative gel images for PDE8B rs4704397 and rs6885099 genotyping	190
7.3	Linkage Disequilibrium Analysis	191
7.4	Correlation of PDE8B rs4704397 and rs6885099 with TSH levels in IF-SCH females	192
CHAPTER 8. SUMMARY AND CONCLUSIONS		
8.1	Effects of etiological factors on thyroid homeostasis and female reproductive system in Subclinical Hypothyroidism	201
8.2	Summary	203
